

**Track Changes
from Chapter 3, Section M V1.11
to Chapter 3, Section M V1.12**

Chapter	Section	Page	Change
3	M0610	M-22	7. Considering only the largest Stage 3 or 4 pressure ulcer or pressure ulcer that is unstageable due to slough or eschar, determine the deepest area and record the depth in centimeters. To measure wound depth, moisten a sterile, cotton-tipped applicator with 0.9% sodium chloride (NaCl) solution or sterile water. Place the applicator tip in the deepest aspect of the ulcer and measure the distance to the skin level. If the depth is uneven, measure several areas and document the depth of the ulcer that is the deepest. If depth cannot be assessed due to slough and/or eschar, enter dashes in M0610C.
