

# 1. CSV EFI File Format

Starting with NPES 3.0, CMS will accept EFI files in CSV (Comma Separated Value) format.

Each CSV EFI File will contain a **Header** record, at least one **Detail** record, and a **Trailer** record.

The tables in this section define the fields that make up each type of record. Each table consists of the following:

- Column Field #**  
 Depending on how you are creating your CSV file, if you are using Excel to generate your CSV files, the alphabetical portion will identify the spreadsheet column. For example, A-1 will be column A, BB-57 will be column BB in your Excel spreadsheet.
- Field Name**  
 Name of the field
- Format**  
 Identifies if the data must be in a specific format. When blank, no formatting is needed.
- Max Length**  
 Identifies the maximum length of the field
- Required**  
 Identifies if the field is a required field
- Allowed Values**  
 Identifies valid values when the field values are restricted. When populated valid values are comma separated. For example "11, 13", identifies that the field can contain either an "11" or a "13".
- Annotation**  
 Defines/describes the field
