Introduction

Purpose

This document describes the file layout for File 1 of 2 files that support the Centers for Medicare & Medicaid (CMS) annual collection of Healthcare Effectiveness Data and Information Set (HEDIS®)¹ patient-level quality of care measures received from Medicare Advantage Organizations (MAOs).

Scope

This document describes the data file layout for File 1 of 2 files that are required to be submitted for HEDIS 2014 patient-level data for the measurement year 2013. This includes specifications for the “header” record and “detail” records. The instructions for File 2 will be submitted in a separate document.

Important Technical Elements Regarding HEDIS 2014 Patient-Level Submissions

Patient-Level and Summary-Level Data Must Match

The patient-level data must match the summary-level data for a particular measure. The patient file should contain all beneficiaries enrolled in the contract at the time that the summary measures are calculated. The patient file should be calculated following the same measure specifications as the summary-level data. To ensure an exact match, make a copy or “freeze” the database when the measures are calculated. If the measure was calculated using the hybrid method, the patient-level data should be reported on the minimum required sample size, including additional records if an “over-sample” method was used, or the total denominator population, if the sample was smaller than the minimum required sample size.

Inclusion of Contract Number

There should be no embedded spaces between the “H” or “R” and the four digits of the contract number.

Inclusion of Health Insurance Claim (HIC) Number

Include the Health Insurance Claim (HIC) number for every contract member enrolled at any point during the measurement year (2013). The HIC number is the number assigned by CMS to the member upon applying for Medicare services. For most members, the HIC consists of a nine-digit Social Security number followed by one or two alphanumeric characters (e.g., 111223333A, 123456789C1). Only members entitled to Medicare under the Railroad Retirement Board will have a different format. Typically, the format for these members starts with one or two alpha characters (e.g., WA123456). The HIC number must be a continuous string, with no hyphens or embedded spaces. The HIC number allows CMS to match HEDIS data to other patient-level data for special projects of national interest and research. As this is the key field for linking to other CMS databases, it is critical that the HIC number be present and in the proper format, without spaces or other random characters. Although the nine digits in the HIC number are often the same as a member’s Social Security number, this may not always be the case, so it is important NOT to use a member’s Social Security number in lieu of the HIC number.

Use of Logical vs. Quantitative Values in Numerators and Denominators

The ***HEDIS 2014 Patient-Level Data File Specifications*** require logical values for some measures and quantitative values for others. An example of a logical value is *Breast Cancer Screening*. Values of “1” or “0” indicate that the member was either included or not included in the numerator or denominator of the measure. An example of a quantitative value is *Follow-up after Hospitalization for Mental Illness*, where the submission will show a numerical value that indicates the number of times the member was included in the numerator or denominator of a measure. Please pay special attention to the description of each measure in these instructions to derive a valid, acceptable value. Do not use a quantitative value of “2” in columns where only logical

values of “1,” “0,” and “9” are accepted. Missing values or fields in which data were not collected require 9’s to fill the entire field. Do not use stars, asterisks, or any other values that are not acceptable.

Member Months Values and Value of Zero (0) in Member Months Field

The member month contribution (MMC) is the number of months each Medicare member was enrolled in the contract in 2013. The MMC does not vary by measure, and does not apply to the Effectiveness of Care measures. The member month pertains only to Use of Services measures. Each member should have a member month value between 0 and 12. A value greater than 12 is not acceptable.

A value of “zero” is valid for the Member Months field in the rare instances in which a member may have incurred plan services early in January 2013 and been included in one or more HEDIS measures, but may have dis-enrolled prior to the point at which they met the definition for incurring a member month, as defined by the plan.

Some members may have “aged” into the Medicare product from the plan’s commercial product, or have dual eligibility with Medicare and Medicaid during the year. In these instances, the contribution to the MMC calculation of a non-Medicare product should not be counted.

How to Report Rates of “NR,” “NB” and “NA” in Patient-Level Submissions

Reported rates of “NR” should be recorded in the patient-level file as a “0.” Each member would show a “0” in the numerator and denominator field for all measures receiving an “NR.” In those Effectiveness of Care measures having multiple numerators (e.g., *Comprehensive Diabetes Care*) in which some numerators have been designated as “NR” and some “R,” plans should report “0” in the numerator field for each member in each measure designated as “NR,” and record a “0” or “1” as appropriate for each numerator assigned an “R.” For such a measure, if at least one of the numerators receives an “R,” then members who were included in the eligible population for the purpose of calculating the HEDIS rate should also show a “1” in the associated denominator column.

If the measure rate is “NB” because the plan does not offer a benefit required for the measure (e.g., pharmacy benefit for *Antidepressant Medication Management*), each member should receive a “0” for both the denominator and numerator(s) of the measure.

If the measure rate is “NA” because of an insufficient number of members in the eligible population, those members who were in the eligible population of the measure, and those who received the event or service in question, should be counted in the denominator and numerator, respectively. For example, if a plan has 29 members in the eligible population for the *Breast Cancer Screening*, and 20 members who qualified for inclusion in the numerator, the plan’s IDSS submission will show “NA” as the reported rate. In its patient-level data file, the plan should show a “1” in Column 100 for each of the 29 eligible members, and a “1” in Column 101 for each of the 20 members who received the screening.

How to Report Data When Using the Hybrid Data Collection Method

When using the hybrid method, record a “1” in the specific measure denominator field for the final set of sampled members and a “1” in the specific measure numerator field for the final set of sampled members who recorded a numerator “hit” when the HEDIS measure was calculated. For example, in a sample of 411 members drawn from eligible population for *Colorectal Cancer Screening*, 275 members may have been identified as receiving the procedure through administrative data, and another 50 through medical record review. Therefore, all of the 325 members identified through either method should show a “1” in the numerator, with the 411 sampled members from the eligible population having a “1” in the denominator column.

File Validation Rules

Each record in the data set will be validated against the following validation rules:

- Each row will be validated to ensure that it is exactly 333 characters long.
- Numeric values (e.g., member months, denominators, and numerators) must be right-justified and blank filled to the left of the value.
- Text fields (e.g., “Organization Name” in the header record and “HIC Number” in the detail records) must be left-justified and blank filled to the right of the value.
