

MEDICARE PART B VERSUS PART D COVERAGE ISSUES

This document is not a statement or promise of coverage, but rather a discussion of when something *may* be covered under Parts A, B or D, if all other coverage requirements are met. For example, a Part D drug must still be medically necessary

Introduction

This document provides an overview of outpatient prescription drug coverage policies under Medicare. Beneficiaries who are inpatients of hospitals or skilled nursing facilities during covered stays may receive drugs as part of their treatment. Typically, the payment for drugs is bundled into the Medicare Part A payments made to these types of facilities.¹ Under the hospice benefit, beneficiaries receive drugs that are medically necessary for symptom control or for pain relief. In general, references are seen to five major categories of Medicare Part B drug spending: 1. drugs billed by physicians and typically provided in physicians offices (such as chemotherapy drugs); 2. drugs billed by pharmacy suppliers and administered through durable medical equipment (DME), such as respiratory drugs given through a nebulizer; 3. drugs billed by pharmacy suppliers and self-administered by the patient (such as immunosuppressive drugs and some oral anti-cancer drugs); 4. Separately billable drugs provided in Hospital Outpatient Departments; and 5. Separately billable End Stage Renal Disease (ESRD) drugs such as erythropoietin (EPO). Regional differences in Part B coverage policies for drugs can occur in the absence of a national coverage decision. A drug for which coverage is available under Part A or Part B, as it is being “prescribed and dispensed or administered” with respect to the individual, is excluded from the definition of a Part D drug and, therefore, cannot be included in Part D basic coverage.

Medicare Part A and Part B Covered Drugs

Part A/B Covered Drugs Set by Statute

Traditional Medicare (Part A/B) does not cover most outpatient prescription drugs. Medicare bundled payments made to hospitals and skilled nursing facilities generally cover all drugs provided during a stay. Medicare also makes payments to physicians for drugs or biologicals that are not usually self-administered. This means that coverage is usually limited to drugs or biologicals administered by infusion or injection. However, if the injection is generally self-administered (e.g., Imitrex), it is not covered.

¹ If these drugs are provided as part of a Medicare Part A covered inpatient hospital or skilled nursing facility stay, they are generally bundled in the Medicare Part A payment to the facility. The exception with regard to inpatient hospital services is clotting factor which is paid separately. For covered SNF stays certain high cost chemotherapy drugs are billed separately along with preventive injections (e.g. flu shots). If a beneficiary does not have Part A coverage, if Part A coverage for the stay has run out or if a stay is non-covered, hospitals and SNFs are paid for Part B covered drugs.

Despite the general limitation on coverage for outpatient drugs under Part B, the law specifically authorizes coverage for the following:

Durable Medical Equipment (DME) Supply Drugs. These are drugs that require administration by the use of a piece of covered DME (e.g., a nebulizer, external or implantable pump). The statute does not explicitly cover DME drugs; they are covered as a supply necessary for the DME to perform its function. The largest Medicare expenditures for drugs furnished as a DME supply are for *inhalation drugs*, which are administered through the use of a nebulizer (e.g., albuterol sulfate, ipratropium bromide). The other category of drugs Medicare covers as a DME supply are drugs for which administration with an *infusion pump* in the home is medically necessary (e.g. some chemotherapeutic agents).

Immunosuppressive Drugs. Drugs used in immunosuppressive therapy (such as cyclosporine) for a beneficiary who has received a Medicare covered organ transplant.

Hemophilia clotting factors. Hemophilia clotting factors for hemophilia patients competent to use such factors to control bleeding without medical supervision, and items related to the administration of such factors.

Oral Anti-Cancer Drugs. Drugs taken orally during cancer chemotherapy provided they have the same active ingredients and are used for the same indications as chemotherapy drugs that would be covered if they were not self-administered and were administered as incident to a physician's professional service.

Oral Anti-emetic Drugs. Oral anti-nausea drugs used as part of an anti-cancer chemotherapeutic regimen as a full therapeutic replacement for an intravenous anti-emetic drug within 48 hours of chemotherapy administration.

Pneumococcal vaccine. The vaccine and its administration to a beneficiary if ordered by a physician.

Hepatitis B vaccine. The vaccine and its administration to a beneficiary who is at high or intermediate risk of contracting hepatitis B.²

² High risk groups currently identified include: individuals with ESRD; individuals with hemophilia who received Factor VIII or IX concentrates; clients of institutions for individuals for the mentally handicapped; persons who live in the same household as a hepatitis B Virus (HBV) carrier; homosexual men; illicit injectable drug abusers. Intermediate risk groups include: staff in institutions for the mentally handicapped and workers in health care professions who have frequent contact with blood or blood-derived body fluids during routine work.

Influenza vaccine. The vaccine and its administration when furnished in compliance with any applicable state law. The beneficiary may receive the vaccine upon request without a physician's order and without physician supervision.

Antigens. These are prepared by a physician (usually an allergist) for a specific patient. The physician or physician's nurse generally administers them in the physician's office. In some cases the physician prepares antigens and furnishes them to a patient who has been taught to self-administer them at home.

Erythropoietin (EPO). EPO for the treatment of anemia for persons with chronic renal failure who are on dialysis.

Parenteral Nutrition. Parenteral nutrients are covered under the prosthetic benefit. They are available to beneficiaries who cannot absorb nutrition through their intestinal tract. Parenteral nutrition is administered intravenously and is regulated as a drug by the FDA.

Intravenous Immune Globulin Provide in the Home. The MMA created a benefit for the provision of intravenous immune globulin (IVIG) for beneficiaries with a diagnosis of primary immune deficiency disease. Coverage is provided if a physician determines that the administration of IVIG in the patient's home is medically appropriate. Payment is limited to that for the IVIG itself and does not cover items and services related to administration of the product.

Part B Covered Drugs in the Context of a Professional Service

Drugs furnished "Incident To" a Physician's Service. These are injectable or intravenous drugs that are administered predominantly by a physician or under a physician's direct supervision as "incident to" a physician's professional service. The statute limits coverage to drugs that are not usually self-administered.³

Separately Billable ESRD Drugs. Most drugs furnished by dialysis facilities are separately billable. The largest Medicare expenditures for such drugs are for erythropoietin (EPO) which is covered for dialysis beneficiaries when it is furnished by independent and hospital-based ESRD facilities, as well as when it is furnished by physicians.

Separately billable drugs provided in Hospital Outpatient Departments. For Calendar Year 2005, Medicare continues to pay separately for drugs, biologicals and radiopharmaceuticals whose median cost per administration exceeds \$50, while packaging the

³ If a drug is not self-administered by more than 50 percent of Medicare beneficiaries, it is considered "not usually self-administered".

cost of drugs, biologicals, and radiopharmaceuticals whose median cost per administration is less than \$50 into the procedures with which they are billed.

Drugs covered as Supplies or - “Integral to a Procedure.” Some drugs are covered as supplies that are an integral part of a procedure which is a diagnostic or therapeutic service, including radiopharmaceuticals (both diagnostic and therapeutic) and low osmolar contrast media. Other examples of drugs covered under the “integral to a procedure” provision include eye drops administered before cataract surgery.

Blood. Medicare does make separate payment for blood and blood products and these products are regulated as biological agents by the FDA.

Drugs furnished as a part of a service in these provider settings. 1. Drugs packaged under the Hospital Outpatient Prospective Payment System; 2. Drugs furnished by ESRD facilities and included in Medicare’s ESRD composite rate; 3. osteoporosis drugs provided by home health agencies under certain conditions; 4. Drugs furnished by Critical Access Hospitals’ (CAH) Outpatient Departments; 5. Drugs furnished by a Rural Health Clinic (RHC); 6. Drugs furnished by Federally Qualified Health Centers (FQHC); 7. Drugs furnished by Community Mental Health Centers (CMHC); 8. Drugs furnished by Ambulances; 9. Separately billable drugs provided in Comprehensive Outpatient Rehabilitation Facilities (CORF).

Part D Covered Drugs

Definition of a Part D Covered Drug

A Part D covered drug is available only by prescription, approved by the Food and Drug Administration (FDA) (or is a drug described under section 1927(k)(2)(A)(ii) or (iii) of the Act), used and sold in the United States, and used for a medically accepted indication (as defined in section 1927(k)(6) of the Act). A covered Part D drug includes prescription drugs, biological products, insulin as described in specified paragraphs of section 1927(k) of the Act, and vaccines licensed under section 351 of the Public Health Service Act. The definition also includes “medical supplies associated with the injection of insulin (as defined in regulations of the Secretary).” We define those medical supplies to include syringes, needles, alcohol swabs, and gauze.

Part D Excluded Drugs

The definition of a covered Part D drug excludes any drug for which as prescribed and dispensed or administered to an individual, payments would be available under Parts A or B of Medicare for that individual, even though a deductible may apply.

In addition, the definition of a covered Part D drug specifically excludes drugs or classes of drugs, or their medical uses, which may be excluded from coverage or otherwise restricted under Medicaid under section 1927(d)(2) of the Act, with the exception of smoking cessation agents. The drugs or classes of drugs that may currently be otherwise restricted under Medicaid include:

1. Agents when used for anorexia, weight loss, or weight gain.
2. Agents when used to promote fertility
3. Agents when used for cosmetic purposes or hair growth.
4. Agents when used for the symptomatic relief of cough and colds
5. Prescription vitamins and mineral products, except prenatal vitamins and fluoride preparations
6. Nonprescription drugs
7. Outpatient drugs for which the manufacturer seeks to require that associated tests or monitoring services be purchased exclusively from the manufacturer or its designee as a condition of sale
8. Barbiturates
9. Benzodiazepines

While these drugs or uses are excluded from basic Part D coverage, drug plan sponsors can generally include them as part of supplemental benefits, provided they otherwise meet the definition of a Part D drug. Because non-prescription drugs do not otherwise meet the definition of a Part D drug, they may not be included as part of supplemental benefits; however, under certain conditions as part of a plan utilization management program (including a step-therapy program), non-prescription drugs can be provided at no cost to enrollees. The cost of these drugs to the plan would be treated as administrative costs under such programs.

ATTACHMENT I**Part B Drugs and Part D Coverage Chart**

Drugs are covered under Part B in a variety of settings and under a variety of payment methodologies.

- Some drugs are paid on a cost basis or are part of a prospective payment, including: drugs packaged under the outpatient prospective payment system (OPPS); drugs furnished by End-Stage Renal Disease (ESRD) facilities and included in Medicare’s ESRD composite rate; osteoporosis drugs provided by home health agencies under certain conditions; and drugs furnished by: critical access hospitals’ outpatient departments; rural health clinics; federally qualified health centers; community mental health centers; and ambulances.
- In addition, there are 13 categories of drugs for which separate payment is made under Part B⁴, including: drugs furnished “incident to” a physician service; separately billable ESRD drugs; separately billable drugs provided in hospital outpatient departments; durable medical equipment (DME) supply drugs; drugs covered as supplies; drugs used in immunosuppressive therapy; blood clotting factors; certain vaccines; antigens; parenteral nutrition; certain oral drugs used in cancer treatment; separately billable drugs provided in comprehensive outpatient rehabilitation facilities (CORFs); and intravenous immune globulin provide in the home.⁵

The following chart groups the various categories of Part B coverage according to the extent to which they present some ambiguity for billing entities and/or Part D plans with regard to whether coverage should be under Part B or Part D. This ambiguity has different implications for Prescription Drug Plans (PDPs) and for Medicare Advantage-Prescription Drug (MA-PD) Plans (including PACE plans and Section 1876 Cost plans which are treated similarly to MA-PDs). For PDPs, the plan sponsor needs to

⁴ If these drugs are provided as part of a Medicare Part A covered inpatient hospital or skilled nursing facility stay, they are generally bundled into the Medicare Part A payment to the facility. The exception with regard to inpatient hospital services is clotting factor which is paid separately. For covered SNF stays certain high cost chemotherapy drugs are billed separately along with preventive injections (e.g. flu shots). If a beneficiary does not have Part A coverage, if Part A coverage for the stay has run out or if a stay is non-covered, hospitals and SNFs are paid for Part B covered drugs.

⁵ Medicare does make separate payment for blood and blood products under Part A and Part B. Although these products are regulated as biologicals by FDA, they are not administered in a context that would not be covered under Part A or Part B. Therefore, these products are not Part D drugs. As a result, they are not included in this discussion.

determine whether it should make any payment. For MA-PDs, the MA organization needs to determine whether a payment should be assigned to its Part D spending or to its spending for Part B services.

A. Situations in which a billing entity would have to decide whether for a given drug (NDC) to bill Part B or Part D based on characteristics of beneficiary or medical use of the drug.

Relationship between Part B and Part D Coverage	Categories of Separately Billable Part B Drugs	Comments
<p>1. The same drug (NDC) dispensed by a pharmacy may be covered under Part B or Part D depending on the characteristics of the beneficiary</p>	<p>Drugs used in Immunosuppressive therapy for a transplant covered under Medicare.</p>	<p>Pharmacists would bill Part B or the individual’s Part D plan based on information received from the individual or the Part D plan. Part B would be billed if the individual had a Medicare-covered transplant; otherwise, the Part D plan would be billed. (Part D plan eligibility systems could contain a marker for members who had a Medicare covered transplant. This information could come from a question included on the Part D plan’s enrollment or COB survey form.)</p> <p>In determining whether to pay for an immunosuppressive drug under Part D, it would not be appropriate for a Part D plan to institute a general policy of requiring a Part B claim rejection, as a substitute for maintaining information on transplant status and paying claims based on that information. Such a policy would be disruptive to beneficiaries and pharmacies and would unnecessarily increase Part B contractor costs. Instead a prior authorization requirement would be appropriate.</p>
<p>2. The same drug (NDC) provided by an infusion/DME supplier may be covered under Part B or Part D depending on the characteristics of the beneficiary or method of administration</p>	<p>a. Parenteral nutrition (for individuals with a non-functioning digestive tract)</p>	<p>The supplier would need to know whether the therapy was being provided because of a non-functioning digestive tract. If so, Part B would be billed. Otherwise this would be a Part D drug.</p> <p>It would not be appropriate for PDPs to routinely require a rejection of a claim under Part B before processing a Part D claim. Such a policy would be disruptive to beneficiaries and pharmacies and would unnecessarily increase Part B contractor costs. However, if a PDP had evidence indicating that a</p>

		<p>particular claim for parenteral nutrition should be covered under Part B, it would be reasonable to require a rejection by Part B before processing in this case.</p>
	<p>b. Infusible DME supply drugs</p>	<p>The supplier would bill Part B if the drug was administered using an infusion pump and bill the Part D plan for infusion using other methods (e.g. IV push). While professional services and supplies related to the administration of the infused drug are not payable under Part D, some coverage may be available under Part A or B Home Health benefits, under Medicaid, or from secondary commercial health benefits.</p> <p>As a rule, drugs infused using an implantable pump would be covered under Part B. Drugs infused using an external pump are covered under Part B if they are included under the local coverage policy of the applicable Medicare DMERC.</p> <p>The fact that coverage is available for a particular drug under Part B with the use of an infusion pump does not mean that coverage under Part D using some other method of administration automatically can be denied. There is no Part B coverage in the home for infusion drugs administered without an infusion pump (e.g. IV push). There is also no Part B coverage in the home for infusion drugs administered with an infusion pump unless the drug is specifically covered under the local coverage policy of the applicable Medicare DMERC. Therefore, determinations about PDP payment for these other methods of administration and for drugs administered with an infusion pump but not covered by the local DMERC policy should be based on the question of whether the drug is on the plan formulary.</p>
	<p>c. Intravenous immune globulin (IVIG) provided in the home for individual with diagnosis of primary</p>	<p>The supplier would bill Part B if the diagnosis is primary immune deficiency disease. IVIG provided in the home for other diagnoses would be a Part D benefit.</p>

	immune deficiency disease	As discussed above, it would not be appropriate, as a general rule, for PDPs to require a rejection of a claim under Part B before processing a Part D claim. Prior authorization programs could be used to ensure medical necessity in accordance with Plan policy.
3. The same drug (NDC) dispensed by a pharmacy may be covered under Part B or Part D depending on how the drug is used in treatment and the medical condition for which the drug is being prescribed.	a. Certain oral chemotherapy agents used in cancer treatment for which there is an infusible version of the drug.	<p>Pharmacists would need to determine the reason for treatment. If related to cancer treatment, Part B would be billed; otherwise, the Part D plan should be billed. Pharmacists would bill the Part D plan for all other oral chemotherapy agents.</p> <p>To the extent that a Part B-covered oral anti-cancer drug has no other medically accepted indication besides cancer treatment, Part D plans should not include these drugs on their formularies because of Part B coverage. For the drugs that have other medically accepted indications, prior authorization programs or other mechanisms to obtain diagnostic information could be used to ensure appropriate payment.</p>
	b. Oral anti-emetics used in cancer treatment as a full replacement for intravenous treatment.	<p>2. Pharmacists would need to determine the reason for treatment. If both related to cancer treatment and a full replacement for intravenous administration within 48 hours of cancer treatment, Part B would be billed; otherwise, the Part D plan should be billed. Note: In order to receive Part B payment, CMS currently requires that the prescribing physician indicate on the prescription that the oral anti-emetic is being used “as a full therapeutic replacement for an intravenous anti-emetic drug as part of a cancer chemotherapeutic regimen.”</p> <p>If based on a prior authorization program or other mechanism to obtain diagnostic information, a PDP determined that a) a Part B-covered oral anti-emetic was being billed, and b) the drug was being furnished in the context of cancer treatment for use within 48 hours of cancer treatment, the PDP should deny payment. Such drugs dispensed for use after the 48-hour period, or any</p>

		oral anti-emetic prescribed for conditions other than the effects of cancer treatment, would be Part D drugs.
4) The same vaccine may be covered under Part B or Part D depending on the characteristics of the beneficiary	Hepatitis B vaccine for individuals at high or intermediate risk.	Physicians would need to determine the level of risk of the individual. If the individual is at high or intermediate risk, Part B would be billed. For all other individuals, prior authorization programs could be used to ensure medical necessity in accordance with Plan policy. Beneficiaries in PDPs would generally submit a paper claim for Part D reimbursement, since a vaccine dispensed in a physician’s office would not be billable by means of routine pharmacy electronic claims systems.
B. Situation where the form of the drug determines where it is covered.		
Relationship between Part B and Part D Coverage	Categories of Separately Billable Part B Drugs	Comments
The same drug provided by a DME supplier or a pharmacy may be covered under Part B or Part D depending on its form (i.e. for use in nebulizer or in metered dose inhaler)	Inhalation DME supply drugs	Certain inhalation drugs are generally covered under Part B when used with a nebulizer. These drugs would not be covered under Part D for use with a nebulizer. However, if these drugs were delivered with a metered dose inhaler or other non-nebulized administration, they would be Part D drugs.
C. Situations where Part B coverage is in the context of another service.		
Relationship between Part B and Part D Coverage	Categories of Separately Billable Part B Drugs	Comments
The same drug (NDC) dispensed by a pharmacy is covered under Part B if provided as part of a service in a provider, physician’s office or home.	<ol style="list-style-type: none"> 1. Drugs furnished “incident to” a physician service 2. Separately billable ESRD drugs 3. Separately billable 	Generally, if a beneficiary presents at a pharmacy with a script it would be a Part D drug. The availability of Part B coverage in a provider setting or physician’s office should not result in a refusal of coverage under Part D for drugs dispensed by a pharmacy. This is the case because coverage is not available under Part B as the drug is being “prescribed and dispensed or

	<p>drugs in HOPDs</p> <ol style="list-style-type: none"> 4. Separately billable drugs in CORFs 5. Drugs packaged under the Outpatient Prospective Payment System (OPPS) 6. Drugs furnished by End-Stage Renal Disease (ESRD) facilities and included in Medicare’s ESRD composite rate 7. Osteoporosis drugs provided by home health agencies under certain conditions 8. Drugs furnished by critical access hospitals’ outpatient departments 9. Drugs furnished by rural health clinics 10. Drugs furnished by federally qualified health centers 11. Drugs furnished by community mental health centers 12. Drugs furnished by ambulances. 	<p>administered” with respect to the individual. Thus, for example, while Part B covers certain injectables provided “incident to” a physician services, injectables dispensed by a pharmacy are not being “furnished” by a physician and would be Part D drugs.</p> <p>PDPs should deny claims submitted by members for Part B-covered injectables if they are administered in a physician office from a physician’s supply.</p> <p>PDPs can subject injectables and infusables that would be covered under Part B as “incident to” a physician service, to a prior authorization program. To the extent that the sponsor determines based on medical society guidelines and other medical literature that there exist serious safety concerns such that it would go against accepted medical practice for a particular injectable or infusable to be dispensed directly to a member, the claim can be denied as not "reasonable." Safety-based reasonableness determinations will need to be made on a case-by-case basis, since circumstances will vary. In general, however, there are very few instances when an injectable or infusable drug could not be reasonably dispensed directly to the patient.</p>
--	--	---

D. Completely unambiguous situations.		
Relationship between Part B and Part D Coverage	Categories of Separately Billable Part B Drugs	Comments
1) Unique drugs never dispensed by a pharmacy.	Non-DME drugs covered as supplies (including radiopharmaceuticals (both diagnostic and therapeutic) and low osmolar contrast media.)	This category of drugs is those used for diagnostic or therapeutic purposes in a provider or physician office setting. We would assume that these drugs are not dispensed by pharmacies.
2) Drugs that would not be covered under Part D because of Part B coverage.	<ol style="list-style-type: none"> 1. Blood clotting factors 2. Antigens 3. Pneumococcal and influenza vaccines 	These categories would not be a Part D benefit and should not be included on a Part D plan’s formulary.

ATTACHMENT II

Part B v. Part D Drug Q's and A's

A. EXCLUDED DRUGS

Question 1 - Are certain therapeutic drug categories excluded from Part D?

Answer 1 - There are certain drugs or uses of drugs that are excluded from the definition of a Part D drug. This means that they cannot be provided as part of basic coverage. These exclusions include:

- benzodiazepines,
- barbiturates,
- drugs for anorexia, weight loss, or weight gain,
- drugs used to promote fertility,
- drugs used for cosmetic purposes or for hair growth,
- drugs used for symptomatic relief of cough and colds,
- prescription vitamins and mineral products, except prenatal vitamins and fluoride preparation products,
- non-prescription drugs, and
- drugs for which the manufacturer seeks to require as a condition of purchase that associated tests and monitoring services be purchased exclusively from the manufacturer or its designee.

While these drugs or uses are excluded from basic Part D coverage, drug plan sponsors can generally include them as part of supplemental benefits to the extent they otherwise meet the definition of a part D drug. Because non-prescription drugs are not otherwise considered part D drugs, they cannot be included in supplemental benefits. However, under certain conditions—as part of plan utilization management (step-therapy) programs—non-prescription drugs can be provided at no cost to enrollees. The cost of these drugs would be treated as administrative costs under such programs.

B. EXCLUSIONS RELATED TO MEDICARE COVERAGE UNDER PART A OR PART B

Question 1 – Should drug plans deny claims for drugs covered under Part A or Part B of Medicare?

Answer 1 – Drugs, or uses of drugs, for which coverage is available under Part A or Part B are excluded from the definition of a Part D drug and, therefore, cannot be included in Part D basic coverage. Unlike the list of excluded drugs described above, these drugs, or uses of drugs, cannot be included in supplemental coverage.

There are two important considerations in determining whether a claim to Part D can be denied based on the availability of coverage under Part A or Part B of Medicare.

- First, the exclusion from the definition of a Part D drug for drugs covered under Parts A or B is based on whether coverage is available under Part A or Part B for the drug as it is being “prescribed and dispensed or administered” with respect to the individual. Thus, the same drug may be covered under different circumstances under both programs and coverage generally cannot be determined based solely on the drug itself. Since most Part B drug coverage is available in a provider setting or physician’s office rather than as drugs dispensed by pharmacists, there are very limited situations when a drug claim submitted by a pharmacy should be denied based on the availability of coverage under Part A or Part B.
- Second, , to the extent a drug could be covered under part B as prescribed and dispensed or administered, plan sponsors should view coverage as “available” under Part B regardless of whether or not an individual is actually enrolled in Part B.

Question 2– Can a drug plan require that coverage be denied under Part A or Part B before making payment under Part D?

Answer 2 – Generally, no. However, an exception could be made if a PDP had evidence that a particular claim for parenteral nutrition should be covered under Part B. In this case, it would be reasonable to require a rejection by Part B before processing. In other limited instances, prior authorization programs may be necessary to determine whether the diagnosis of the individual or the particular use of a drug is consistent with Part D coverage, but it would not be appropriate to routinely require a denial from Part A or Part B before making payment in lieu of prior authorization. Such a policy would be disruptive to beneficiaries and pharmacies and would unnecessarily increase Part B contractor costs.

Question 3 - What happens if a drug plan makes payment for a drug and later determines that the drug was covered under Part B as prescribed and dispensed or administered?

Answer 3 - If the drug as prescribed and dispensed or administered was covered under Part B on that day, the payment by the plan would have been in error and it should seek recovery from the billing entity, which should bill Part B instead.

Question 4 - In the case of a newly approved drug that may be covered under one of the Part B benefit categories, can a drug plan defer a coverage decision until Part B makes a decision?

Answer 4 - No. Once a drug is approved by the FDA it is a Part D drug. While it is not automatically a covered Part D drug, that is, it may not be included on a plan formulary, a member could request coverage on an exception basis. Plan sponsors would have to follow the processes and timeframes set forth in regulations with regard to such requests.

For Medicare Part B coverage, a determination has to be made as to whether the approved drug fits in a benefit category (e.g. a drug covered as a supply of an external infusion pump used at home). In the vast majority of cases these determinations are delegated to the individual carriers. If a drug has a Medicare Part B benefit category and the drug is being “prescribed and dispensed or administered” as covered under Part B, the drug is no longer a Part D drug.

Question 5 - How will drug plans determine whether a drug is covered under Part B?

Answer 5 - First, it is important to keep in mind that in most cases Part B drug coverage should not impact payment decisions by drug plans since Part B coverage is generally in a provider setting or physician's office rather than for drugs dispensed at a pharmacy.

Payment for a particular drug can be denied only if there is Part B coverage as the drug is prescribed and dispensed or administered. The fact that a claim is received for a drug that is sometimes covered by Part B is not a basis for denial since the drug plan would have to determine whether the drug is being prescribed and dispensed or administered on the basis under which Part B coverage is available. This will generally involve interaction between the drug plan and the Medicare Part B carrier with jurisdiction in that geographic area for that drug.

With regard to new drugs, as decisions are made nationally or by individual carriers, this information will be available on the CMS and carrier web sites.

INFUSION DRUGS

Question 1 - Since Part B covers infusion drugs in the home, can a drug plan sponsor reject any claim for home infusion?

Answer 1 – No. Part B coverage is generally limited to a number of drugs that require the use of an infusion pump. Any agents administered in the home via IV drip or push injection would be covered under Part D. This could include the same drugs that are covered under Part B when furnished through the use of an infusion pump.

Question 2 - If the infusion services are furnished in a provider setting, can a drug plan sponsor deny a claim?

Answer 2 – Yes. If a physician office or hospital OPD bill for infusion administered in those settings, the claim should always be denied because of coverage in those settings under Part B.

Question 3 – Since Part B covers intravenous immune globulin (IVIG) provided in the home, should drug plans deny claims for this drug?

Answer 3 – It depends. Part B coverage for IVIG in the home is for individuals whose diagnosis is primary immune deficiency disease. Part D would provide coverage for IVIG in the home for all other medically accepted indications. Prior authorization requirements could be used to ensure appropriate payment in accordance with Plan medical necessity criteria. It would not be appropriate to routinely require a rejection of a claim under Part B before processing a Part D claim. Such a policy would be disruptive to beneficiaries and pharmacies and would unnecessarily increase Part B contractor costs.

Question 4 – Since Part B covers parenteral nutrition under certain circumstances, should drug plans deny these claims?

Answer 4 – It depends. Part B coverage for parenteral nutrition is limited to individuals with a non-functioning digestive tract. So if parenteral nutrition is being provided based on this condition, the claim should be denied. For all other medically accepted indications, coverage would be under Part D. Prior authorization programs could be used to ensure appropriate payment. As a general policy, it would not be appropriate to require a rejection of a claim under Part B before processing a Part D claim. However, if a PDP

had a reasonable basis for assuming that a particular claim would be covered under Part B, it could require a rejection by Part B before processing.

ORAL ANTI-CANCER DRUGS

Question 1 - With regard to oral anti-neoplastics, we understand that if they have an IV form, they are covered under Part B. It is our thinking then, that we could exclude those that are used solely for cancer under this premise since they would be covered under Part B.

Answer 1 – Yes. Drug plans should not include on their formularies the oral anti-cancer agents covered by Part B whose only medically accepted indication is as an anti-cancer agent. They should always deny claims for these drugs. For the drugs that have other medically accepted indications, drug plans should deny claims for these drugs when used for cancer treatment but when these drugs are used for other indications they would be Part D drugs. The use of the drug could be determined through a prior authorization program.

ORAL ANTI-EMETICS

Question 1 - Will Part B coverage of oral anti-emetics move to Part D in January 2006?

Answer 1 - There is no change in Part B coverage of oral anti-emetics on January 1, 2006. The only change is that coverage would become available under Part D for medical uses that are not covered under Part B.

Before billing either Part B or Part D, pharmacists would need to determine the reason for treatment. If it is related to cancer treatment and is a full replacement for intravenous administration within 48 hours of cancer treatment, Part B would be billed; otherwise, Part D should be billed. In order to receive Part B payment, CMS currently requires that the prescribing physician indicate on the prescription that the oral anti-emetic is being used “as a full therapeutic replacement for an intravenous anti-emetic drug as part of a cancer chemotherapeutic regimen.”

If (based on a prior authorization program) a PDP determines that a Part B-covered oral anti-emetic drug is being billed, and that the drug is being furnished in the context of cancer treatment for use within 48 hours of such treatment, the PDP should deny payment since coverage is available under Part B. Such drugs dispensed for use after the 48-hour period, or any oral anti-emetic prescribed for conditions other than treatment of the effects of cancer treatment, would be Part D drugs.

IMMUNOSUPPRESSANTS

Question 1 - Will Part B coverage of immunosuppressants move to Part D in January 2006?

Answer 1 - There is no change in Part B coverage of immunosuppressants on January 1, 2006. The only change is that coverage would become available under Part D for uses not covered under Part B.

Pharmacists would bill Part B or the individual's PDP based on information received from the individual or from the drug plan. Part B would be billed if the individual had a Medicare covered transplant; otherwise, the Part D plan would be billed.

INJECTABLES

Question 1 - Can claims submitted by pharmacies for injectable drugs be denied based on Part B coverage in a physician office "incident to" a physician service?

Answer 1 – No. The exclusion from the definition of a Part D drug of drugs covered under Parts A or B is based on whether coverage is available under Part A or Part B for the drug as it is being "prescribed and dispensed or administered" with respect to the individual. Thus, the same drug may be covered under different circumstances under both programs. As a result, coverage cannot generally be determined based solely on the drug itself.

The fact that an injectable is covered under Part B in a physician's office or hospital outpatient department or other provider setting does not mean that these drugs should be excluded from drug plan formularies, or that a drug plan can deny a claim from a pharmacy based on availability of Part B coverage in a physician's office. If, however, a member submits an out-of-network claim for an injectable drug administered in-office from a physician's supply, and this drug is covered in that setting by the Part B carrier for that area, such a claim should be denied by the PDP based on Part B coverage. (Of course, an MA-PD plan would not deny such a claim, but rather pay it under the A/B benefit.)

Question 2 - An injectable drug that a Medicare carrier considers to be usually not self-administrable (e.g. injectable chemotherapy drugs) can only be covered under Part B as "incident to" a physician service if it is obtained by a physician and administered as part of a physician service. Can Part D plan sponsors require prior authorization for these medications when

dispensed by a pharmacy? If the sponsor determines that the drug will be administered in a physician office, can the sponsor deny the claim because the practice of the patient taking the drug to the physician's office for administration is unsafe and because coverage is available under Part B if the physician obtained and administered the drug?

Answer 2 - Part D plan sponsors determine the scope of their own prior authorization programs subject to CMS review to ensure that such programs have a sound medical basis and do not discriminate against beneficiaries with certain medical conditions.

To the extent that a sponsor's prior authorization program applies to injectables and infusables that would be covered under Part B as "incident to" a physician service, and the sponsor determines based on medical society guidelines and other medical literature that there exist serious safety concerns such that it would go against accepted medical practice for a particular injectable or infusable to be dispensed directly to a member, the claim can be denied as not "reasonable." Thus, the dispensing of that particular drug to that member may be excluded by the plan under Section 1862(a)(1)(A) of the Social Security Act as applied to Part D under 1860D-2(e)(3)(A) of the Act. This same safety concern would not exist, however, if the claim for the drug was being submitted by an infusion supplier.

Safety-based reasonableness determinations will need to be made on a case-by-case basis, since circumstances will vary. In general, there are very few instances when an injectable or infusable drug could not be reasonably dispensed directly to the patient. All drugs are in some sense hazardous. This is not a unique characteristic of injectables and infusables.

Some situations that would present safety concerns in dispensing directly to a patient who is transporting the drug to a physician's office for administration include:

- The drug itself presents a bona fide public safety hazard (e.g. highly radioactive substance) that requires chain of custody handling using persons of special qualifications.
- The drug requires special handling to preserve biologic activity and the patient is incapable or unwilling to do so. (For instance, a vaccine that must be kept frozen could be a problem if the patient had to transport it a long distance in summer heat.)
- The patient presents a high risk of diversion or inappropriate use. (For instance, giving a heroin addict a vial of morphine.)
- The patient has demonstrated unreliability, aversion, or unwillingness in transporting drugs to his doctor's office. (For instance, with respect to dispensing injectable psychiatric meds.)

In the absence of a serious safety concern based on the individual situation, however, there is no basis for denying a prescription presented at a pharmacy based on the availability of Part B coverage in another setting (e.g. physician office).

Finally, it is our understanding that the practice of “brown-bagging” drugs is opposed by medical societies. We will urge them to reinforce this message with the start of the Part D program.

Question 3 – Most Medicare Advantage plans treat most non-self-injectables as a medical benefit. Beginning January 1, 2006, do they have to treat them as a Part D benefit?

Answer 3 - If an injectable drug was previously covered under Part B in a provider or physician office setting, it will continue to be covered under Part B in those settings. If it was previously not covered in those settings (e.g. determined by the carrier to be usually self-administered), then it will need to be covered under Part D. In addition, claims for non-Part-B-covered injectables whether usually self-administered or not, when dispensed and submitted by pharmacists could be covered under Part D. However, Part D plans could establish medical necessity criteria for limiting coverage of injectable drugs in physician offices.

Question 4 - What are drug plan sponsors to do if their region includes multiple carrier areas and these carriers have differing policies with regard to injectable drugs?

Answer 4 – A PDP sponsor will have to modify its coverage based on the variation in Part B coverage across carrier areas within its region. That is, assume that there are two carrier areas within a PDP region, Carrier A and Carrier B. Further assume that Carrier A covers injectable X when furnished in a physician office but Carrier B does not. As a result of this difference in Part B coverage, injectable X is a Part D drug when furnished in a physician office for members residing in Carrier B’s area, but not in Carrier A’s area. In either area, injectable X would be covered under Part D if dispensed by a pharmacy.

For MA-PD plans, rules for selecting local coverage determinations apply. That is, if a local MA plan’s service area includes more than one carrier area, the plan may seek approval from CMS to apply uniformly to all of the plan’s enrollees local coverage policies that are the most beneficial to enrollees. Regional MA plans can select a set of local coverage policies to apply uniformly to their enrollees without CMS pre-approval. In either case, if the selected carrier covers injectable X, the MA-PD would treat injectable X as a basic A/B benefit. If the selected carrier does not cover injectable X, the MA-PD would treat it as a Part D drug.

Question 5 –What about new injectable drugs?

Answer 5 - As new injectables are approved by FDA, Part B carriers or CMS would continue to make coverage decisions regarding drugs provided incident to a physician service based on whether the drug is “not usually self-administered.” Injectables not covered under Part B as incident to a physician service would become Part D drugs. However, there is no requirement for Part D plans to provide coverage of non-Part-B-covered drugs in the physician office setting if the drugs can be safely self-administered and there is no medical necessity for administration in that setting.

INHALATION DRUGS

Question 1 - Can claims submitted by a pharmacy for inhalation drugs delivered through metered-dose inhalers be denied based on Part B coverage of inhalation drugs used with a nebulizer?

Answer 1– No. Since there currently is no coverage under Part B for inhalation drugs delivered through metered-dose inhalers and dispensed by a pharmacy, these drugs would be covered under Part D.

VACCINES

Question 1 – Will all vaccines be covered under Part D effective January 1, 2006?

Answer 1 – No. If a vaccine was previously covered under Part B, it will continue to be covered under Part B. If it was previously not covered, then it will need to be covered under Part D. Pneumococcal and influenza vaccines are not covered under Part D because of Part B coverage. Hepatitis B vaccine is covered under Part B for individuals at high or intermediate risk; for all other individuals, it would be covered under a Part D benefit. All other currently available vaccines and all future vaccines would be covered under Part D, but could be subject to Plan prior authorization requirements to determine medical necessity.

Question 2- If a drug plan sponsor determines through a prior authorization program that a Hepatitis B vaccine is going to be administered by a physician can the drug plan sponsor deny the claim based on Part B coverage in the setting?

Answer 2 – No. Since the Part B benefit for Hepatitis B vaccine is separate from the “incident to” benefit, the determination about whether it is a Part D drug depends solely on characteristics of the beneficiary. However, if the plan sponsor determines based on

Medicare Part B guidelines that the individual is at high or medium risk for Hepatitis B, the claim should be denied. For all other individuals, the vaccine would be a “Part D drug”, and would be covered unless the plan had otherwise established medical necessity criteria for the vaccine as part of its approved prior authorization program. In which case, only low risk individuals who meet the plan's criteria would be eligible to receive the vaccine.

Question 3 - Medicare Part B covers hepatitis B vaccine for high and intermediate risk groups if ordered by a doctor of medicine or osteopathy, how are these groups defined?

Answer 3 – The high risk groups for whom vaccination is covered include:

- Individuals with End stage renal disease (ESRD)
- Individuals with hemophilia who received Factor VIII or IX concentrates
- Clients of institutions for individuals for the mentally handicapped
- Persons who live in the same household as a hepatitis B Virus (HBV) carrier
- Homosexual men
- Illicit injectable drug abusers

Intermediate risk groups include:

- Staff in institutions for the mentally handicapped
- Workers in health care professions who have frequent contact with blood or blood-derived body fluids during routine work.

ANTIGENS

Question 1 – If a pharmacy submits a claim for antigens should a drug plan make payment?

Answer 1 – No. Antigens are covered only under Part B.

BLOOD CLOTTING FACTORS

Question 1 – If a pharmacy submits a claim for blood clotting factors should a drug plan make payment?

Answer 1 – No. Blood clotting factors are covered under Part A and Part B.

OFF-LABEL INDICATIONS

Question 1 - Describe how drugs used for off-label indications will be covered under Part D. My understanding is that coverage for off-label use is less liberal under Part D compared to Part B.

Answer 1 - A prescription drug is a Part D drug only if it is for a medically accepted indication as defined in the Medicaid statute. This definition includes uses supported by a citation included, or approved for inclusion, in one of four compendia. These are:

- American Hospital Formulary Service Drug Information
- United States Pharmacopeia-Drug Information
- DRUGDEX Information System
- American Medical Association Drug Evaluations

Based on this statutory definition, indications are not “medically accepted” if they are supported in peer-reviewed medical literature, but not yet included or approved for inclusion in one of the compendia. Therefore, the use of a drug for such indications would not meet the definition of a Part D drug and plans should deny payment.

NON-FDA APPROVED DRUGS

Question 1- Can a drug plan pay for drugs that have not been approved by the FDA?

Answer 1 - Generally no. In order to be considered a Part D drug, a drug generally must be approved by the FDA. However, those limited class of drugs described under section 1927(k)(2)(A)(ii) and (iii) of the Act are also considered Part D drugs. Thus, a drug plan cannot make payment for a non-approved drug as part of its basic benefit unless it is a drug described under section 1927(k)(2)(A)(ii) or (iii) of the Act. In addition, it cannot provide coverage of such drugs as a supplemental benefit under enhanced coverage.

MEDICAL FOODS

Question 1 - Are medical foods, enteral nutrition or other special dietary formulas included in the Part D benefit?

Answer 1 - In order to be included in the Part D benefit, a product must satisfy the definition of Part D drug and not otherwise be excluded. A Part D drug generally must be regulated by the FDA as a drug, biological or vaccine. While parenteral nutrients are regulated as drugs, medical foods such as enteral nutrients are not. Therefore, these products cannot be covered by Part D plans.
