

The Center of Innovation

The Center for Medicare & Medicaid Innovation (CMMI) develops and tests new healthcare payment and service delivery models. CMMI's models are alternative payment models (APMs) which reward health care providers for delivering high-quality and cost-efficient care.

Mission: Innovate in the pursuit of affordable and better health care for all Americans.

Vision: A health care system that achieves equitable outcomes through high quality, affordable, and person-centered care.

Patient Care Models Group

The Patient Care Models Group (PCMG) develops and implements models and initiatives that test care delivery and payment innovations to improve quality of care and reduce spending. PCMG models and initiatives focus on primary care and specialty care. PCMG also designs and operates CMMI's bundled payment models, which test whether bundling together payment for care across an extended period of time improves quality and reduces spending. Our models incorporate ambulatory care, as well as care in facilities like hospitals and post-acute care providers.

Why work with us?

You'll be part of a highly collaborative team with many opportunities to connect with others on technical issues like health care payment policy, quality measurement, regulations development and analysis, and health equity. There are five PCMG Divisions that focus on separate, but related, models and initiatives. Our work involves collaborating across our group as well as with colleagues across CMMI, CMS, and HHS. The highly technical nature of our work means our staff possess a wide range of skills and expertise, and we're constantly learning.

Skills we're looking for

We're looking for people with interest and experience in health care, public health and/or working with the Medicare and Medicaid programs, including recent graduates. We're also looking for people with legal backgrounds.
