

# The Center of Innovation

The Center for Medicare & Medicaid Innovation (CMMI) develops and tests new healthcare payment and service delivery models. CMMI's models are alternative payment models (APMs) which reward health care providers for delivering high-quality and cost-efficient care.

**Mission:** Innovate in the pursuit of affordable and better health care for all Americans.

**Vision:** A health care system that achieves equitable outcomes through high quality, affordable, and person-centered care.

## State Population Health Group

The State & Population Health Group (SPHG) designs and implements models and initiatives that foster prevention, encourage care delivery innovation, improve costs, and help to create more equitable outcomes.

Some of our models allow us to work with state governments to design creative health care financing approaches for hospitals and primary care. We also work with providers to develop new care models that more effectively address chronic conditions like diabetes and cardiovascular disease, and get better outcomes in areas like maternal health, rural health, and behavioral health. We also work with communities to develop solutions for health-related social needs as a way to improve health outcomes.

### Why work with us?

Our work is based on 3 pillars:

1. You'll be part of a team developing models that enable creative solutions to the country's most pressing health system issues.
2. We learn from what is and isn't working, and strive to continuously improve using evidence from our model experiences.
3. We value "Joy at Work" and work to have a culture that makes each person in our group feel connected to our mission, enables everyone to thrive at work and at home, and feel that our group is a great place to work.

### Skills we're looking for

We're looking for people with interest and experience in health care, public health and/or working with the Medicare and Medicaid programs, including recent graduates. We're also interested in IT, legal, and administrative professionals.
