**Subject: Incoming File from CMS: Beneficiary-level file to support 2015 Part D bids**

CMS has pushed out to all MA-PD plans, 1876 Cost Plans, PACE organizations, and PDPs a beneficiary-level file that your actuaries will be using to develop 2015 Part D bids. This memo is to inform you that there may be potential action that is needed for you to accept this new file. Please also note that we posted contract-PBP level risk score data on HPMS.

The file name will be constructed as follows:

GENTRAN: P.Rxxxxx.PRTD2015.Dyymmdd.Thhmmsst.pn  
C:D mainframe: zzzzzzzz.Rxxxxx.PRTD2015.Dyymmdd.Thhmmsst  
C:D non-mainframe: [directory]Rxxxxx.PRTD2015.Dyymmdd.Thhmmsst

### **KEY**

xxxxxx = 5 character plan contract #

yymmdd = two digit year, month, day

hhmmsst = hour/minute/second/tenths of second

pn = process number

zzzzzzzz = Plan-provided high level qualifier, default is EFTO for production; EFTT for test

[directory] = optional directory specified from non-mainframe C:D clients, default is EFTO. for production; EFTT. for test

Below is the file layout with technical notes.

### **Tech Notes –**

Please note the following:

1. The file includes beneficiaries who were in your contract for at least one month in 2013.
2. The risk scores provided in this file are not normalized and your projected 2015 risk score will need to take into account the appropriate normalization factor, per the 2015 Bid Instructions. The 2015 Part D normalization factor is 0.961.
3. The estimated 2013 risk score takes into account retroactive (1) enrollment and disenrollment, (2) long term institutional status, and (3) low income status that have occurred since the 2013 payments were initially made. The diagnosis data used for the risk score estimates are from calendar year 2012 dates of service (i.e., the data collection period) based on: 1) plan diagnosis data submitted through January 31, 2014 and 2) Medicare FFS diagnosis data through January 2014.
4. Final 2013 risk scores will use the same runout for plan-reported diagnoses; approximately one more month of FFS diagnostic runout; as well as any additional status changes that occur before the final risk score run (e.g., low income, long term institutional, disability, ESRD).
5. The 2013 Part D risk scores were calculated using both the RxHCC risk adjustment model that was used in 2013 payment and the RxHCC risk adjustment model that will be used in 2015 payment. The RxHCC model that will be used in 2015 payment is the same RxHCC model used for payment in 2014. The coefficients for the 2013 model are published in the 2013 *Rate Announcement*, published on April 2, 2012. The coefficients for the 2015 model (which is the same as the model used in 2014) are published in the 2014 *Rate Announcement*, published on April 1, 2013.
