Health IT Vendors in CPC+

Comprehensive Primary Care Plus (CPC+) is a national advanced primary care medical home model that aims to strengthen primary care through regionally based multipayer payment reform and care delivery transformation. CPC+ practices are required to meet specific health IT requirements that differ by track. In order to support Track 2 practices, health IT vendors must sign a Memorandum of Understanding (MOU) with the Centers for Medicare & Medicaid Services (CMS).

The two tables below provide information on health IT vendors who have signed MOUs to support Track 2 CPC+ practices and other health IT vendors participating in CPC+.

- **Table 1** lists health IT vendors that have signed an MOU with CMS as part of supporting Track 2 practices. The "Vendors with Signed MOU" column contains links to vendor websites. Practices seeking a health IT vendor to support their participation in CPC+, especially Track 2, may be interested in reviewing this list.

- **Table 2** lists other health IT vendors that currently support CPC+ practices. Health IT vendors in this table may offer one or more of the health IT functions required for CPC+, however they have not signed an MOU with CMS to support Track 2 practices.

Please note that this document includes health IT vendors who voluntarily submitted contact information to CMS. CMS does not endorse any health IT vendor included in these tables, nor does inclusion in this document confirm that a specific health IT vendor's products will meet the CPC+ health IT requirements. Practices should reach out to health IT vendors directly to learn more about their products.
