## PERFORMANCE DECILES FOR CJR QUALITY MEASURES

This document presents performance deciles for the quality measures included in the Comprehensive Care for Joint Replacement (CJR) model as of Performance Year 6 (PY6) reconciliation. The first table shows the distribution of hospitals' complications rates ${ }^{1}$ in deciles for the total hip arthroplasty and/or total knee arthroplasty (THA/TKA) complications measure (CBE \#1550). The second table presents deciles for the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) Linear Mean Roll-up (HLMR) score, which summarizes performance across HCAHPS survey measures. For both quality measures, a higher decile represents better measure performance. In calculating the CJR composite quality score, CMS awards points to a hospital based on its decile and whether the hospital improved its performance by at least two deciles from the prior performance period.

THA/TKA Complication Measure Performance Deciles

|  | Complication <br> Rate <br> Baseline | Complication <br> Rate <br> PY1 | Complication <br> Rate <br> PY2 | Complication <br> Rate <br> PY3 | Complication <br> Rate PY4 | Complication <br> Rate PY5.1 | Complication <br> Rate PY5.2 | Complication <br> Rate PY6 |
