Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation's seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation—a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC's recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

GENERAL

GENERAL

Dear Sir or Madam:

I am the Director of Sports Medicine at Ohio University. I have a Masters Degree from The University of Virginia. I have been a certified athletic trainer for 19 years. I have been licensed by the state of Ohio since 1994.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

John R. Bowman, MEd, ATC

Physician Self-Referral Provisions

Physician Self-Referral Provisions

I am writing to remove Physical Therapy from the list of items that are exempt from physician self referral. I have personally seen physicians direct patients to their own clinics "to keep a close eye on them" and then refer other patients with more complicated conditions to other clinics based on the type of insurance the patient has. I have also seen patient with orders for physical therapy for 3x/week for 3 weeks to the physicians clinic, but when their insurance dictates they go elsewhere, the order gets changed to 3 visits for a home ex program. If the physician sees a possible bad outcome from surgery or other procedure, they will send the patient to other clinics, so their clinic can boast of "great outcomes". In general if a patient has poor potential or low reimbursing insurance the physician will make sure they are referred to other clinics, not their own. Patients with good potential will steered toward their own clinic despite having to pay a higher copay or deductible for out of network services, but the physician will tell the patient that their therapist know their protocols. When a therapist from out clinic calls the physicians office or their therapy clinic they will not give out the protocol or refer us to well known protocols in text books, but not THEIR protocol. If you would like to speak with me further, please call me at 423-431-6327 or cell number is 423-426-2245.

Background

Background

August 29, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES

Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

? First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
? Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
? Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,

Patricia Sheridan, CRNA

Re: "TECHNICAL CORRECTIONS"

The proposed rule dated July 12th contained an item under the technical corrections section calling for the current regulation that permits a beneficiary to be reimbursed by Medicare for an X-ray taken by a non-treating provider and used by a Doctor of Chiropractic to determine a subluxation, be eliminated. I am writing in strong opposition to this proposal.

While subluxation does not need to be detected by an X-ray, in some cases the patient clinically will require an X-ray to identify a subluxation or to rule out any "red flags," or to also determine diagnosis and treatment options. X-rays may also be required to help determine the need for further diagnostic testing, i.e. MRI or for a referral to the appropriate specialist.

By limiting a Doctor of Chiropractic from referring for an X-ray study, the costs for patient care will go up significantly due to the necessity of a referral to another provider (orthopedist or rheumatologist, etc.) for duplicative evaluation prior to referral to the radiologist. With fixed incomes and limited resources, seniors may choose to forgo X-rays and thus, needed treatment. If treatment is delayed, illnesses that could be life threatening may not be discovered. Simply put, it is the patient that will suffer as result of this proposal.

I strongly urge you to table this proposal. These X-rays, if needed, are integral to the overall treatment plan of Medicare patients and, again, it is ultimately the patient that will suffer should this proposal become standing regulation.

Respectfully Submitted,

Dr. Christopher Baggett

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

My name is John Finley; I am a Certified Athletic Trainer from Delaware. I am currently employed by Goldey-Beacom College (NCAA Div II) as the Head Athletic Trainer. I am responsible for oversight of the Athletic Training Department at the college and I am responsible for the healthcare of 130 athletes in 10 varsity sports. This is my 17th year of service as a Certified Athletic Trainer and I have worked in most aspects of the profession. Over the past 17 years I have worked in the clinical setting, clinical outreach, youth sports organizations, middle school, High School, Small College (Div. II and III), Large College (Div. I), and Professional Athletics.

I am also currently the President-Elect, for the Delaware Athletic Trainers Association, and helped to shape the current laws in the state. The State of Delaware and the Delaware Physical Therapy Association have recognized the high level of education and training that Athletic Trainers possess. The current laws in Delaware allow Athletic Trainers to treat patients according to their education and training, not based on the setting in which they practice. For years we were allowed to evaluate, set up therapeutic exercise programs and make return to play decisions for Athletes in college and high school settings. However, when we entered the Physical therapy clinic we were not qualified to do anything but run errands. Does this make any sense, as soon as we enter the clinic we forget all of our education and training?

In Delaware we are now recognized for the education and training that we posses. With a physicians prescription for Athletic Training, Athletic Trainers have the ability to evaluate, treat and discharge patients. It gives the physician the ability to choose who is best qualified to treat a particular patient.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,
John Finley MEd, ATC, LAT

Re: 'TECHNICAL CORRECTIONS'

The proposed rule dated July 12th contained an item under the technical corrections section calling for the current regulation that permits a beneficiary to be reimbursed by Medicare for an X-ray taken by a non-treating provider and used by a Doctor of Chiropractic to determine a subluxation, be eliminated. I am writing in strong opposition to this proposal.

While subluxation does not need to be detected by an X-ray, in some cases the patient clinically will require an X-ray to identify a subluxation or to rule out any 'red flags,' or to also determine diagnosis and treatment options. X-rays may also be required to help determine the need for further diagnostic testing, i.e. MRI or for a referral to the appropriate specialist.

By limiting a Doctor of Chiropractic from referring for an X-ray study, the costs for patient care will go up significantly due to the necessity of a referral to another provider (orthopedist or rheumatologist, etc.) for duplicative evaluation prior to referral to the radiologist. With fixed incomes and limited resources, seniors may choose to forgo X-rays and thus, needed treatment. If treatment is delayed, illnesses that could be life threatening may not be discovered. Simply put, it is the patient that will suffer as result of this proposal.

I strongly urge you to table this proposal. These X-rays, if needed, are integral to the overall treatment plan of Medicare patients and, again, it is ultimately the patient that will suffer should this proposal become standing regulation.

Background

Background

Dear Sir or Madam:

I am a certified athletic trainer and have worked at Flagstaff High School (AZ) for 21 years.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of aceess to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation serviees, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health eare needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medieare Part A or B hospital or rehabilitation facility.

Sincerely,

Tom Lyle, M.S., ATC

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Background

Background

August 20, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Background

Background

Dear Administrator,

As a CRNA and a member of the AANA I am writing to support the Centers for Medicare and Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. As a provider of anesthesia services in rural areas I can attest to the fact that failure to elevate the conversion factor and continuing the 10% cuts proposed by Congress will have deleterious effects on the ability to retain and recruit providers in rural areas. CRNA's are the predominant providers to rural and medically underserved America. The continued availability of anesthesia services depends in part on fair Medicare payment for the CRNA's services. I applaud the agency's acknowledgement that anesthesia payments have been undervalued, and the proposal to increase the conversion factor will solidify the ability of CRNA's to provide quality anesthesia services to the rural and medically underserved areas of America.

Sincerely

District 3
Hollister, Ca. 95023

To whom it may concern

San Benito County California is a regional neighbor and shares jurisdictional boarders with the counties of Monterey and Santa Cruz. As such we share many regional health care physicians and practices. Medicare physician fees in our geographic region are in dire need of adjustment to recognize the high cost of providing services here.

It is our belief that Option 3-revision to payment localities of the proposed rule is the most equitable and best option for California, but its calculation is faulty. If properly computed San Benito would qualify to be moved into the same locality as Monterey. The data that should be used to correctly calculate adjustments is the information unearthed by the General Accounting Office in its June Report.

Please review this data and it will be apparent that our needs in San Benito County are equally significant to our neighbor counties.

Sincerely

Pat Loe

#11534

CITY OF HUNTINGTON BEACH

2000 MAIN STREET FIRE DEPARTMENT CALIFORNIA 92648

August 27, 2007

Leslie Norwalk, Acting Administrator
Centers for Medicare & Medicaid Services
Department of Health & Human Services
Attention: CMS-1385-P
P.O. Box 8012
Baltimore, Maryland 21244-8012

Re: CMS-1385-P; Medicare Program; Proposed Revisions to Payment Policies Under the Physician Fee Schedule, and Other Part B Payment Policies for CY 2008; Proposed Revisions to the Payment Policies of Ambulance Services Under the Ambulance Fee Schedule for CY 2008; and the Proposed Elimination of the E-Prescribing Exemption for Computer-Generated Facsimile Transmissions.

Dear Ms. Norwalk:

The Huntington Beach Fire Department provides emergency ambulance services to the communities which we serve. The proposed rule would have a direct impact on our operation and the high quality health care we provide to Medicare beneficiaries. We therefore greatly appreciate this opportunity to submit comments on the proposed rule.

BENEFICIARY SIGNATURE

The Huntington Beach Fire Department commends CMS for recognizing that providers and suppliers of emergency ambulance transportation face significant hardships in seeking to comply with the beneficiary signature requirements. Ambulance services are atypical among Medicare covered services to the extent that, for a large percentage of encounters, the beneficiary is not in a condition to sign a claims authorization during the entire time the supplier is treating and/or transporting the beneficiary. Many beneficiaries are in physical distress, unconscious, or of diminished mental capacity due to age or illness. The very reason they need ambulance transportation often contraindicates the appropriateness of attempting to obtain a signature from the beneficiary.

We believe strongly, however, that the relief being proposed by CMS would have the unintended effect of increasing the administrative and compliance burden on ambulance services and on the hospitals. Accordingly, we urge CMS to abandon this approach and instead eliminate entirely the beneficiary signature requirement for ambulance services.

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Coding--Multiple Procedure Payment Reduction for Mohs Surgery

Coding--Multiple Procedure Payment Reduction for Mohs Surgery

This change will have a significant negative impact on the healthcare of U.S. citizens and potentially add unnecessary cost to the delivery of healthcare in this country, by reducing the cure rates for skin cancer from well over 99% to the 90-94% achievable with non-Mohs approaches and forcing more surgeries to be done in the hospital setting. Mohs micrographic surgery is the gold standard among all treatments for skin cancer, allowing the physician to examine 100% of the cancer margin to insure complete removal of the cancer with loss of as little normal skin as possible. The critical component of Mohs surgery includes meticulous removal and microscopic examination of the entire edge and deep margin of the cancer, in which the same physician serves as both surgeon and pathologist. The procedure is particularly valuable in the treatment of skin cancers in cosmetically or functionally important areas such as the face, neck, hands, feet and genitalia. It is also valuable for large, aggressive, or ill-defined cancers and for those that have recurred after other previous treatment.

In 2006, CMS reviewed the American Medical Association s Current Procedural Terminology (CPT) codes 17304 17310 (Mohs micrographic surgery) and requested that new site-specific codes be developed similar to those used for other excisional surgery. The American Academy of Dermatology, the American Society for Dermatologic Surgery, and the American College of Mohs Micrographic Surgery and Cutaneous Oncology participated in last year s review of the Mohs CPT codes, and new codes were adopted (17311-17315) addressing CMS concerns without adversely affecting the delivery of these services to patients in need. If the proposed change is enacted, we will be forced to change the way we deliver care in order to cover our costs of providing this service.

In its review of the Mohs codes in 1991, CMS agreed that Mohs excisions are separate staged procedures; they will be paid separately with no multiple surgery reductions. This rule was placed in the Federal Register at that time (Federal Register, November 25, 1991, volume 56, #227, pg 59602). In 2004, the Mohs codes were added to the CPT Appendix E list of codes exempt from the -51 modifier and the multiple surgery reduction rule, to eliminate the occasional carrier misunderstanding when the multiple surgery reduction was applied to these codes. The July 2004 CPT Assistant article reviewed the rationale: The rationale for this policy is that for many surgical procedures some of the work of a procedure is not repeated when two or more procedures are performed. For these procedures the intraservice work is only 50% of the total work, while the other 50% represents pre- and post-service work that overlaps when multiple procedures are performed on the same patient on the same date of service. For Mohs surgery, however, greater than 80% of the work is intraservice work that does not overlap when two or more procedures are performed. The pathology portion of Mohs surgery constitutes a large portion of this total and also is not reduced with multiple procedures. The pre-service and post-service work values are small because there is a zero-day global period. Together there is very little overlap or reduction in work when two or more tumors are treated on the same patient on the same day. Therefore, Mohs surgery codes are exempt from the use of modifier 51.

The exemption of the Mohs codes from the MSRR has been maintained by CMS since 1992 and was not questioned during the CMS mandated five-year review of the Mohs codes undertaken last fall or during presentation of the new Mohs codes to the AMA Relative Value Update Committee (RUC) in October, 2006. Our practice has been caring for the patients of Kentucky since 1951, and we have been successfully treating patients via Mohs surgery for 20 years. If the proposed change is enacted, patients will suffer and CMS will spend more to achieve less.

RE: CMS 1385 P (BACKGROUND, IMPACT) ANESTHESIA SERVICES

Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to
ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for
Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at pproximately 40% of private market rates.

ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.

ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically
underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,

Carrie Harris, CRNA, MS, APNP

GENERAL

GENERAL

Dear Sir or Madam:

My name is Steve Gross and I have been employed by Capital High School as an Athletic Trainer and Health Teacher for the past 17 years. I work with approximately 700 athletes, 67 Coaches who participate in 12 sports. I also have a successful relationship with the six Orthopedic Surgeons and four Physical Therapists that work directly with Helena School District #1 in Montana.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Steven M Gross ATC.CSCS

Resource-Based PE RVUs

I STRONGLY, ...VERY STRONGLY support the inerease in ANESTHESIA unit value recommended for 2008 by the RUC.

Anesthesiology services were severely undervalued at the onset of RBRVS. This was openly acknowledged by CMS in it's comments in the FEDERAL REGISTER prior to implementation of anesthesia RBRVS. The RUC recommendations will partially correct the inequity.

As a RETIRED anestheiologist and, more importantly, a CURRENT MEDICARE BENEFICIARY I have a very strong interest in having the best medical services available to me. Please IMPLEMENT THE FULL INCREASE RECOMMENDED BY THE RUC. I want to stay alive as long as I can.

Technical Corrections

Technical Corrections

Re: TECHNICAL CORRECTIONS

The proposed rule dated July 12th contained an item under the technical corrections section calling for the current regulation that permits a beneficiary to be reimbursed by Medicare for an X-ray taken by a non-treating provider and used by a Doctor of Chiropractic to determine a subluxation, be eliminated. I am writing in strong opposition to this proposal.

While subluxation does not need to be detected by an X-ray, in some cases the patient clinically will require an X-ray to identify a subluxation or to rule out any "red flags," or to also determine diagnosis and treatment options. X-rays may also be required to help determine the need for further diagnostic testing, i.e. MRI or for a referral to the appropriate specialist.

By limiting a Doctor of Chiropractic from referring for an X-ray study, the costs for patient care will go up significantly due to the necessity of a referral to another provider (orthopedist or rheumatologist, etc.) for duplicative evaluation prior to referral to the radiologist. With fixed incomes and limited resources seniors may choose to forgo X-rays and thus needed treatment. If treatment is delayed illnesses that could be life threatening may not be discovered. Simply put, it is the patient that will suffer as result of this proposal.

I strongly urge you to table this proposal. These X-rays, if needed, are integral to the overall treatment plan of Medicare patients and, again, it is ultimately the patient that will suffer should this proposal become standing regulation.

Sincerely,

Ernesto Lombardi D.C.

RE: CMS–1385–P (BACKGROUND, IMPACT)
ANESTHESIA SERVICES

Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS' proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS' proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

- First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
- Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers' services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
- Third, CMS' proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS' proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America's 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency's acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,
Sara Byerly, CRNA

Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I believe it is extremely important to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations. This must not be allowed to happen.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full and complete implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

I appreciate your atention to this urgent matter.
Thank you.
Sincerely,

Ronald A. MacKenzie, D.O.

Coding--Reduction In TC For Imaging Services

Coding--Reduction In TC For Imaging Services

To restrict the reimbursement for X-rays provided by a non-provider physician taken due to referral by a chiropractic physician is inefficient and potentially dangerous. It is inefficient because if the chiropractic physician decides that X-rays are necessary to diagnose the patient's condition or to rule out pathology or to determine the need for additional studies to ascertain the potential need for referral, the patient (and Medicare) would have to undergo the additional expense of an additional office consultation as well as the payment for the radiographic study. It is potentially dangerous because it could deprive the chiropractic physician of timely information which prevent treatment, thereby leading to a worsening of the presenting condition, or delay the diagnosis of a potentially life threatening condition. It would also contravene the scope of practice laws governing the practice of Chiropractic in most of the states which are the regulating entities of the profession.

RE: CMS–1385–P (BACKGROUND, IMPACT)
ANESTHESIA SERVICES

Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS' proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS' proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.

Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers' services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.

Third, CMS' proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments. Additionally, if CMS' proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America's 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency's acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,
Randy Ashman, CRNA

Physician Self-Referral Provisions

Physician Self-Referral Provisions

RE: Physician owned physical therapy facilities.

Physician owned physical therapy clinics benefit the patient, physical therapist and physician in many ways. I am a physical therapist working for an orthopedic physician in Idaho and see on a daily basis the positive impact a physician owned physical therapy clinic has on all those involved. I have worked in other clinics owned and operated by a physical therapists and always felt the inability to be in close contact with my patient s physician was a hindrance in their recovery. Now I have constant interaction with my patient s physician and surgeon, which provides me with a detailed understanding of their diagnosis and condition, pre-warning of possible obstacles, immediate response to questions or concerns regarding their care and ongoing updates on medical changes.

All of our patient s have been very happy with the clinic arrangement, as they are confident I have a detailed knowledge of their surgical history and precautions prior to treating them as well as immediate updates on medial changes throughout their eare. They are also guaranteed quick answers to questions they may have regarding their care and recovery even if I don t have an answer, as I can easily check with their physician and get them the answers they need to keep them safe. These are all things patient s would expect from all physical therapists, but after working in others settings I know it is very difficult to get detailed information on a patient s condition or surgery and when questions arise it often take days to get answers, which does not only limit patient progress but could put them in danger. By attending a physician owned physical therapy clinic patients are also able to use the most state of the art equipment, which physician and therapist pick together to best fit the patient population and post surgical needs. Due to these benefits both myself and the physician have seen quicker and better overall patient recovery since the clinic opened.

In addition to benefiting our patients, I have also gained a great deal by working for a physician. First and foremost is the knowledge I have received regarding surgical procedure and recovery. This is something I would have never received working in a traditional physical therapy setting as it is not available in standard continuing education curriculums and was only briefly covered in physical therapy school. Working directly with a physician has also given me access to a extended network of healthcare information including a wide range of medical professionals, orthopedic and rehabilitation journals specific to my post surgical patients and health care databases,

allowing immediate answers to medical questions, which I never had working in a physical therapist owned clinic. I feel the additional knowledge and training I have received in the short time working for a physician has made me a more qualified and confident physical therapist and allowed me to better treat my patients.

Those physical therapists who disagree with physician owned physical therapy clinics are only looking at the financial impact on their own physical therapy businesses and not the advantages it creates for patients. They fear that physicians who own their own clinics will no longer allow patients to attend other physical therapy clinics but this is not true. Patients are always informed that they have the option to attend any physical therapy clinic and are told by the physician that he has financial interest in the elinic. With this open patient physieian relationship the patients follow up is always in their own hands. This is no different than a physician working for a hospital referring to that same hospital.
Physical therapists need to realize that they are not loosing patients to the physician, the patient is just being provided with more options in their care and recovery. Physicians should be able to own PT clinics.

I am writing to express my support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule.

Since the implementation of the fee schedule in 1992, payments for anesthesia services under Medicare have been undervalued.

This proposed rulc -- providing for an increase in anesthesia work values -- represents an important step toward correcting a longstanding inequity.

Please move forward in finalizing, as currently written, the proposed increase for anesthesia work values.

Thank you.

SUU SOUTHERN UTAH UNIVERSITY

Physical Education Department
(435) 586-7816

August 29, 2007

Dear Sir or Madam:

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P. While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients. As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available. Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Ben Davidson, MS, ATC
Athletic Training Major Program Director

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

PHYSICIAN SELF-REFERRAL ISSUES

I urge CMS to remove PT services from permitted services under the in-office ancillary exception. I am a physical therapist in Detroit, Michigan and have been practicing since 1971. We DO NOT have direct access in this state which allows physicians even greater control over physical therapy for the Medicare patient.

There is a great potential for fraud and abuse when physicians are able to refer Medicare beneficiaries to PT facilities in which they have a financial interest. Physicians who own practices that provide PT services have an inherent financial incentive to continue to refer patients and statistics have shown this overutilization.

We have received many phone calls and have treated patients that have relayed to us that their physician instructed them to ONLY ATTEND THEIR PT CLINIC- that they would not write a PT referral for another PT facility! This is restriction of trade.

Thank you for your consideration-Sincerely, Mary Ann Uznis PT

CMS-1385-P-11596-Attach-1.DOC

11596

August 29, 2007

Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 **RE: CMS-1385-P (BACKGROUND, IMPACT)**
Baltimore, MD 21244-8018 **ANESTHESIA SERVICES**

Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS' proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS' proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.
_ First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for
Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and
others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
_ Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers' services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
_ Third, CMS' proposed change in the relative value of anesthesia work would help to correct the
value of anesthesia services which have long slipped behind inflationary adjustments. Additionally, if CMS' proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America's 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency's acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,
Cheryl McGinnis, CRNA, MS

Coding--Multiple Procedure Payment Reduction for Mohs Surgery

Coding--Multiple Procedure Payment Reduction for Mohs Surgery

This proposal represents a dramatic reversal of sixteen years of the Centers for Medicare and Medicaid Services (CMS) own determination that the Mohs codes are and should be exempt from the Multiple Procedure Reduction Rule (MPRR). Furthermore, because of the dual components of surgery and pathology associated with each Mohs surgery procedure, there is no gain in efficiencies when multiple, separate procedures are performed on the same date, making application of the reduction inappropriate. Third, this proposal is contrary to the Relative Value Update Committee s (RUC) own policy regarding procedures qualifying for exemption from this rule. Fourth, this proposal will negatively impact Medicare beneficiaries access to timely and quality care. Fifth, application of this proposal will not likely generate significant cost savings and may paradoxically increase costs of providing care to these patients. Finally, we are concerned that the Proposed Rule reflects an alteration in the traditional role of the RUC in CMS policy formulation.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

My name is Thomas Essig and I am writing in regards to the 2008 Medicare physician fee schedule rule. I have read that CMS expressed concern that the in-office ancillary services exception to the Stark law is being misconstrued and created a thriving environment for fraud ad abuse. I have been a practicing Physical Therapist for over 32 years. I have seen over the last few years an increase in the number of physician owned physical therapy clinics. Physicians who own practices that provide physical therapy services have and inherent financial incentive to refer their patients to the practices they have invested in. Because of Medicare referral requirements, physicians have a captive referral base of physical therapy patients in their offices. I have observed that those arrangements can impact the care of patients referred to physical therapy. I have often seen physicians who own their physical therapy clinies demand that their patients can only be seen at their clinies. This limited choice of physical therapy locations and hours of operation can be very inconvenient and not in the best interest of the patient.

By eliminating physical therapy as a designated health service (DHS) furnished under the in-office ancillary services exception, CMS could improve the overall care and services of physical therapy patients.

Thank you for your understanding in this matter.
Sincerely,
Thomas Essig P.T.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

This is a letter outlining my feelings of the proposed plan by the American Physical Therapy Association to support a bill eliminating the ownership of physical therapy and rehabilitation facilities by physicians and to prevent them from referring to those facilities that they have an interest in.

I as an orthopedic surgeon have been fully trained in rehabilitation. We spend several months and then a considerable amount of time working with the rehabilitation of injured patients in our training programs. I have a special interest in sports medicine, and after starting working as a team physician in Colorado I had the hospital develop a physical therapy program designed to help me rehabilitate my patients. There were no facilities of any kind at that time doing that. I also began working with the athletic trainers and eventually began teaching methods for physical trainers in regard to postoperative care of patients. That was in Texas at Southwest Texas University. During those years I had my own physical therapy along with my partner specifically addressing the needs of post surgical rehabilitation of the athlete. Since coming to Idaho I have been continually .frustrated with the ability to get my postoperative patients adequately rehabilitated by therapists. Therapists as a rule know little or nothing about the post surgical rehabilitation of patients and have little understanding of the operative procedures that were done.

Until last year I had tried to utilize local therapists, some of which are much better than others, but all of which lack some basic understanding of what I am trying to achieve. When the two therapists that I use primarily told me about 2 years ago that they never listened to what I asked them to do anyway, that they simply rehabilitated on their own protocols, I decided that it was time that I needed to take charge of the rehabilitation of my own patients. Several of my patients over the last few years have been irreversibly injured by the therapists, and more commonly they receive inadequate rehabilitation and have difficulty regaining their normal function ability.
Since I have owned my own therapy I have been able to teach my specific therapists exactly what I want in the postoperative courses and the reason why it needs to be done. We need to, at least 2-3 times a week, discuss a patient's progress and the
rationale and need for a specific treatment modality. This team approach and the rehabilitation,of these patients is the same technique that I used in Texas utilizing a physical therapist and an athletic trainer.
The results over the last year and a half have been dramatic. My patients achieve a much higher level of recovery of their function and are able to return to sports-specific activities which was difficult in the past. I have also had no injuries to any patient to date in part because of the procurement of state of the art rehabilitation equipment for these specific joints.
If physicians such as I who are dedicated to rehabilitation, and have been ,for 20 years, are prevented from continuing in our desire for excellent outcomes surgically then poor patient outcomes will be the result and continued frustration on the surgeons' part.

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:
I am a Certified Athletic Trainer employed by Louisiana State University as an instructor in the Department of Kinesiology. I earned a Masters degree from the University of Virginia and a Bachelors degree from Truman State University. I am currently working towards my Doctorate degree in the area of musculoskeletal mechanics. In my seven years of practice as a Certified Athletic Trainer I have provided services for high school and college athletes, physically active college students, military academy students, professional athletes in various sports, police, fireman, and a variety of other physically active individuals. I have also worked with several physicians to provide cost efficient athletic training services to their patients and enhance the overall quality of healthcare afforded to these patients.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.
While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.
As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.
The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.
Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.
Sincerely,
Melissa D Thompson, MEd, ATC, LAT

RE: Physician Self-Referral Issues

August 29, 2007,

Dear Mr. Weems:

I wish to comment on the July 12 proposed 2008 physician fee schedule rule, specifically the issue of physician self-referral and the in-office ancillary services exception.

I am a physical therapist and have practiced in Columbus, Ohio for 14 years. Over this time I have developed many professional relationships with area physicians as a result of a team approach in caring for patients.

Likely due to declining reimbursement for medical services many physicians have established ancillary service lines to replace income. My concern is the growing trend of physicians owning physical therapy practices. I believe physicians have changed from focus on patient care and networking with reputable ancillary providers to focus on manipulating patients to receive ancillary services exclusively within their privately owned service lines.

The patients are not given a choice about where they go for physical therapy; I have first hand knowledge of this. They are scheduled for their initial evaluation at the off-site referral for profit therapy facility while they are still in the physician office.

Patients that myself and my co-workers have treated successfully for previous conditions have not been permitted to return to see us with current conditions/injuries because the physician instructions were to go to the physician owned facility only.

Physician ownership of physical therapy facilities provides opportunity for fraud and abuse with over-utilization of referrals. In fact, private insurances have begun to investigate the over-utilization practices of physicians. Patients are aggressively pushed toward what are now out-of-office ancillary services owned by the physician, despite convenience of location or preference by the patient.

Physicians that own practices that provide physical therapy services have an inherent financial incentive to refer patients to the practices they have invested in and to over-utilize those services for financial reasons. By eliminating physical therapy as a designated health service furnished under the in-office ancillary services exception, CMS would reduce a significant amount of programmatic abuse and over-utilization of physical therapy services under the Medicare program, and enhance the quality of patient care.

Thank you for your interest in this matter.

Sincerely,

Carol Sauer, PT

Physician Self-Referral Provisions

Physician Self-Referral Provisions

August 29, 2007

To Whom it May Concern:

I am an orthopedic surgeon specializing in sports medicine who would like to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

Athletic trainers are qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. Their education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed athletic trainers to be qualified to perform these services.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

August 20, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES

Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

? First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
? Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
? Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

CMS-1385-P-11627-Attach-1.DOC

#1627

Dear Sir or Madam:

I am a recent graduate of the University of Vermont with a Bachelor's degree in Athletic Training – a CAAHEP approved program. I am currently employed at the RehabGYM, Incorporated in Williston, Vermont, awaiting Board of Certification Licensure.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an aspiring Athletic Trainer, I will be qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. *It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services.* The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Please listen to our voices, for you are affecting thousands of careers with the decisions you make to restrict our profession further. We are qualified health care professions, and Americans are in need of our care now more than ever.

Sincerely,

Jessica L. Benoit

RE: CMS 1385 P (BACKGROUND, IMPACT)
ANESTHESIA SERVICES

Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

? First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
? Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
? Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

THE IOWA CLINIC®

August 29, 2007

Herb Kuhn, Acting Deputy Administrator
Centers for Medicare & Medicaid Services
Department of Health & Human Services

by electronic submission

Comments to **CMS--1385--P**
M. **PHYSICIAN SELF-REFERRAL PROVISIONS**

Dear Mr. Kuhn:

The Iowa Clinic is a 120 provider, physician owned, professionally managed, integrated multi-specialty clinic located in Des Moines, Iowa. We provide in-patient services at all five Des Moines area hospitals and outpatient services throughout central Iowa. The significant changes proposed to the regulations, for which comment is sought, will have a negative effect on the delivery and availability of quality health care in Iowa.

The Stark law is intended to promote competition in the healthcare marketplace. It is also the directive of CMS and the regulations to promote cooperation and partnerships among providers in order to manage utilization, improve availability, and increase efficiency. Since the adoption of the Phase I and Phase II rules we have invested considerable effort and expense to develop arrangements which meet the regulations. Some of these arrangements have allowed us to bring improved technology and service to the community in a cost effective manner. Others have allowed us to be more competitive in a market where specialists are in short supply and recruitment is challenging.

The proposed changes will require, if adopted, that we and many other physician groups evaluate our existing contracts and partnerships and potentially unwind, discontinue or restructure those arrangements. Undoing these partnerships will do nothing in Central Iowa to improve the cost effectiveness of healthcare that was one of the initial objectives.

In-Office Ancillary Services Exception:

This exception has fostered the convenience, integration and availability of health services. In-office ancillary services not only assist diagnosis and plan of treatment, but enhance the coordination of care and the convenience of care. Patients or families of patients may schedule multiple physician, diagnostic testing and therapy visits for the same time and same location. Adjustments, corrections or changes to testing and therapies are more readily accomplished and communicated when physicians are at the location.

Requiring that in-office ancillary services be limited to essentially "incident to" services is contrary to the notion of integrated, coordinated healthcare. Providing physical therapy and other treatment therapies within the clinic is effective, efficient care and service for our patients. This is of particular

Downtown Administration
1215 Pleasant Street, Suite 618 • Des Moines, IA 50309 • Phone 515-241-5785 • Fax 515-241-4415

concern to a multi-specialty group practice like The Iowa Clinic. No change to the ancillary services exception is warranted.

Unit-of-Service (Per Click) Payments in Space and Equipment Leases:

First, the legislative history protecting such arrangements under controlled conditions has not changed and should be honored by the agency.

More important is that per use arrangements recognize the economic reality of costs associated with the use or "click" of a piece of equipment. The cost of maintenance and supplies are often directly tied to the number of uses. The useful life of parts and the equipment itself will be dependent on how often it is used.

Also, a "per click" lease encourages investment in new equipment and new technology. We have been able to assist in bringing a CyberKnife to perform stereotactic radiosurgery to Des Moines and avoid sending patients to Chicago, Denver or Minneapolis. A "per click" lease was best suited for this equipment and its $4 million cost. We, and the community we serve, have relied on the ability to establish unit-of-service leases. The current protections against abuse of such arrangements are sufficient safeguards.

Again addressing the proposed changes generally, they discourage and restrict the ability of the integrated multi-specialty physician group practice to produce income from sources other than a direct fee for service. The underlying premise is that abuse through over utilization is inherent in these arrangements. Initially, the presumption of abuse is offensive to physicians who are using their best clinical judgment in determining the medical necessity for referrals and ancillary services. Secondly, there are other methods and means for monitoring over utilization and certifying standards of performance.

In an effort to control "gaming" (*see* 72 FR 133, p. 38180 (July 12, 2007)) we do not need to dismantle a healthcare infrastructure developed in reliance on the existing rules. This will be detrimental to both patients and practitioners. If integrated, available, convenient, quality healthcare is a goal, the newly proposed regulations will not achieve it. The potential unwinding of existing arrangements will have the effect of reducing service and slowing, if not stopping, the use of new technology, innovative treatments, and coordinated care with our community hospitals.

It is reasonable to allow integrated physician group practices the opportunity for a reasonable business return through arrangements that meet the current rules. These arrangements are already well regulated. We are gravely concerned that the "tightening" of the self-referral rules will, if adopted, require us and other multi-specialty clinics to move away from the infrastructure of integrated, coordinated care they have been trying to build and promote. The tightening of the rules contemplated in this section at a time when there is a lack of dependability of funding through the federal payment systems presents an even greater risk. Thank-you for your consideration.

Sincerely,

C. Edward Brown
Chief Executive Officer

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Sincerely,

Paul T. Carrell, MD

Background

Background

Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,
Bertha Lovelace CRNA,

Issue Areas/Comments

GENERAL

GENERAL

Dear Sir or Madam:

My name is Pascual Guerrero and I am an athletic training student at the Brooklyn Campus of Long Island University. My experiences include a physical therapy clinic as well as college and professional sports.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Pascual Guerrero, ATS

Physician Self-Referral Provisions

Physician Self-Referral Provisions

August 29, 2007

To Whom It May Concern:

My name is J. Mark Skaggs, PT, CSCS, at Orthopedic Rehab Specialists in Rockford, IL. I am writing this brief note input regarding the closure of the Stark Referral for Profit loophole. An orthopedic surgeon here in Rockford, IL, referred an individual with a greater tuberosity fracture and adhesive capsulitis for treatment here at our clinic. She was an elderly individual who had problems for quite some time prior to referral to physical therapy. She was seen successfully in physical therapy here at Orthopedic Rehab Specialists for approximately 4 weeks of treatment prior to her recheck with her physician.

The physician at that time during the recheck stated that he would like to have the individual be seen in his own specific clinic for physical therapy secondary to the fact in her words He could keep an eye on her progression more specifically despite the fact that Orthopedic Rehab Specialists is no more than 1 ? to 2 miles from this physician owned physical therapy clinic. The patient was understandably upset regarding the fact that she was in her own words forced to stop coming to ORS and to go the physician owned clinic and the physician would not budge stating that he had to keep an eye on her despite her improvements at our independent physical therapy department.

Unfortunately, these occurrences with physician owned physical therapy practices are occurring much too often and independent practices of physical therapy like Orthopedic Rehab Specialists are being put at a significant disadvantage. Physical therapy services should definitely be excluded from the in-office ancillary services exception.

Sincerely,

J. Mark Skaggs, PT, CSCS

Physician Self-Referral Provisions

Physician Self-Referral Provisions

The CMS comment on POD labs, if it goes forward, should be careful to differentiate "pass-through" arrangements from true in-office laboratories. Physician office laboratories in my experience are often of superior quality providing cost-effective and efficient medical care that serves the needs of community physicians far better than most hospital labs, centralized pathology groups, or large national independent labs. Pathologists in in-office laboratories have full access to patient medical information - this alone is a vast improvement over the potential service that can be provided by remote pathologists. In-office turnaround times are days to weeks better than the alternatives. Clerical error rates are lower because information systems are coordinated.
The CMS should be aware that the current campaign against so-called "pod" labs is led by a few self-interested private pathologists, some in leadership positions in our national organizations, who wish to monopolize the outpatient biopsy market. These people are using scare tactics to paint with the same brush any nontraditional pathology arrangement, without regard to any real demonstation of quality problems. I suggest that instead of focusing on the straw man of pod labs, the CMS require all providers of pathology services to demonstrate quality of service and appropriateness of utilization, as per CLIA 88, to end the ongoing abusive pathology practice that is occurring in traditional pathology groups, independent labs and academic centers.

Re: TECHNICAL CORRECTIONS

The proposed rule dated July 12th contained an item under the technical corrections section calling for the current regulation that permits a beneficiary to be reimbursed by Medicare for an X-ray taken by a MD or DO and used by a Doctor of Chiropractic to determine a subluxation, be eliminated. I am writing in strong opposition to this proposal.

While subluxation does not need to be deteeted by an X-ray, in some cases the patient clinically will require an X-ray to identify a subluxation or to rule out any "red flags," or to also determine diagnosis and treatment options. X-rays may also be required to help determine the need for further diagnostic testing, i.e. MRI or for a referral to the appropriate specialist.

By limiting a Doctor of Chiropractic from referring an X-ray the cost to the Medicare patient will go up significantly due to the necessity of a referral to an orthopedist or rheumatologist for evaluation prior to referral to the radiologist as it is now. With fixed incomes and limited resources, Medicare patients may choose to forgo X-rays and thus needed treatment. If treatment is delayed illnesses that could be life threatening may not be discovered. Simply put, it is the patient that will suffer as result of this proposal.

I strongly urge you to table this proposal. These X-rays, if needed, are integral to the overall treatment plan of Medicare patients and, again, it is ultimately the patient that will suffer should this proposal become standing regulation.

Sincerely,

Birger Baastrup, D.C., C.C.S.P.

CMS-1385-P-11658-Attach-2.DOC

#11458

Dear Sir or Madam:

Hi, I am Stephanie Sibeto, athletic trainer at Sullivan County high school. I am outreached by Susquehanna Health in Williamsport, PA. I received my B.S. at Lock Haven University and received my Master of Education from Temple University. I worked 14 yrs at the collegiate level and the past 3 years have been at the high school level.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day to day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Stephanie Sibeto, ATC, M.Ed.

Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Sincerely,

Thomas C. Henris, M.D.

Medicare Economic Index (MEI)

Medicare Economic Index (MEI)

Removing the ability for Doctor's of Chiropractic to refer for xrays is simply wrong. As a DC providing physical medicine care for patients, I have seen many things on xrays that preclude me from treating the patient. It is simply unfair and detrimental to patient care to not allow the referral/reimbursement for medicare covered individuals for radiological services.

Instead of limiting our rights, how about letting us do our own xrays and getting paid for them.

Decreased patient safety and inconvenience will be the only noticeable difference seen with the new policy. Please consider the ramifications this rule could have before implementing such a bad policy.

Thank you.

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations. I have observed the unfortunate growth in anesthesiology practices that no longer provide care in hospital settings due to the impact of Medicare payments. My own group remains committed to taking care of the Medicare population in our hospital, but we are finding it increasingly more difficult to recruit new physicians in the face of competition from groups that have largely phased the low Medicare payments out of their practices.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

The potential for fraud and abuse exists when physicians are able to refer Medicare beneficiaries to entities in which they have a financial interest. The situation affecting physical therapy is compounded by Medicare s requirement of a physician referral in order for beneficiaries to receive physical therapy services. Physicians who own practices that provide physical therapy services have an inherent financial incentive to refer their patients to the practices they have invested in and to overutilize those services for financial reasons.

Medicare Economic Index (MEI)

Medicare Economic Index (MEI)

MEI - TECHNICAL CORRECTIONS

Centers for Medicare and Medicaid Services

Department of Health and Human Services

Attention: CMS-1385-P

PO Box 8018

Baltimore, Maryland 21244-8018

Re: "TECHNICAL CORRECTIONS"

The proposed rule dated July 12th contained an item under the technical corrections section calling for the current regulation that permits a beneficiary to be reimbursed by Medicare for an X-ray taken by a non-treating provider and used by a Doctor of Chiropractic to determine a subluxation, be eliminated. I am writing in strong opposition to this proposal.

While subluxation docs not need to be detected by an X-ray, in some cases the patient clinically will require an X-ray to identify a subluxation or to rule out any "red flags," or to also determine diagnosis and treatment options. X-rays may also be required to help determine the need for further diagnostic testing, i.e. MRI or for a referral to the appropriate specialist.

By limiting a Doctor of Chiropractic from referring for an X-ray study, the costs for patient care will go up significantly due to the necessity of a referral to another provider (orthopedist or rheumatologist, etc.) for duplicative evaluation prior to referral to the radiologist. With fixed incomes and limited resources, seniors may choose to forgo X-rays and thus, needed treatment. If treatment is delayed, illnesses that could be life threatening may not be discovered. Simply put, it is the patient that will suffer as result of this proposal.

I strongly urge you to table this proposal. These X-rays, if needed, are integral to the overall treatment plan of Medicare patients and, again, it is ultimately the patient that will suffer should this proposal become standing regulation.

Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Sincerely,

Eddy N. Duncan, M.D.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Date: August 29, 2007

To: Centers for Medicare and Medicaid Services

There is a huge potential for fraud and abuse of physical therapy services when physicians are able to refer Medicare beneficiaries or other patients to entities where they have a financial interest such as physician owned in-house physical therapy clinics. By eliminating physical therapy as a designated health service (DHS) furnished under the in-office ancillary services exception, CMS would reduce the amount of over utilization and abuse of physical therapy services under the Medicare program and enhance quality of care.

I have seen cases of patients continuing to be sent back to physical therapy when owned by the physician when they no longer are benefiting from physical therapy treatment. Often the patient has long been independent with their home program but the physician sends them back to physical therapy because he has a financial interest in keeping the physical therapists in his practice busy. Patient often require multiple physical therapy visits so it is no more convenient for them to receive these visits in their physicians office then in an independent physical therapy clinic.

Thank you for your consideration.

Tiffany Rodman, PT

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

My name is Ray Barile. I am an Athletic Trainer for the St.Louis Blues Hockey Club of the National Hockey League. My players, coaches, staff and management all are affected by the removal of Athletic Trainers from the hospital setting.I see this revision as a step backwards in providing adequate healthcare for all americans.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Raymond Barile, ATC, MS CSCS,LMT

GENERAL

GENERAL

To the Centers for Medicare and Medicaid Services (CMS),

I am writing in regards to the Stark Law involving the in-office ancillary services. I feel the law may be misunderstood and the practices may be misused for financial gains that may or may not be in the best interest of the patients and/or the medical community. With the referring physician being on-sight and involved in the direct financial gains of the facility, there may be instances where the physician may refer services that may otherwise not be ordered. It would seem to me that a physician is almost always refer for physical therapy services if they will be receiving direct financial gains, even though the patient may not require those particular services. These facilities seem to be under regulated and these physicians have a tendency to become abusive with their referrals, again for their own financial gains. These physicians and their facilities need to be more closely regulated, if not unable to operate under these terms where services may be abused. There is not need to have an overseeing physician in the clinic for physical therapy services.

Please take a very good look at the situation that has transpired within these clinics so that the medical community can continue to function with integrity and honesty to better services its patients.

Thank you for your time and your consideration of these comments.

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

My initial training was as a registered nurse. After a few years I went to graduate school and became a certified registered nurse anesthetist. At the age of 36 I went back to Medical School and became an anesthesiologists. I felt that I did not have all the knowledge necessary to take care of extremely ill, complicated patients as a CRNA. I have worked all over the state of Texas in various positions. I, along with the rest of my profession, have become extremely disillusioned by the stress, long hours and increasing acuity level of the patients under our care with decreasing reimbursement! It is the anesthesiologist who keeps patients alive during any procedure! It is a sad state of affairs when the automobile mechanics and the cosmetic dentists make more money per unit of time than those of us who are taking care of the elderly in this country. At the rate things are going I am afraid very few anesthesiologists will be around when I become a senior citizen.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

GENERAL

GENERAL

I am an athletic trainer with over forty years of experience, the last twenty-two serving multiple roles (primarily administrative and business development)in outpatient and inpatient rehabilitation services.
I am writing this letter in response to the proposal Docket ID CMS-1385-P which will limit rehabilitation service providers in hospital outpatient clinics and rehabilitation facilities, specifically licensed athletic trainers.

The question is why is Medicare restricting access of Medicare recipients to degreed professionals who are licensed and/or registered in most states.

As with all other medical professionals, practice parameters for athletic trainers have been established by legislation that has led to guidelines for patient care and treatment. This alone sets the statute/legal guidelines for appropriate treatment of appropriate patients.

It is more than evident that those opposing Medicare reimbursement for athletic training services are doing so only to protect their turf and, of course, income. This is a special interest issue as opposed to a sound clinical issue. Additionally, the rhetorical issue of safety for Medicare recipients is absurd and without either merit or evidence based research.

As a soon to be Medicare recipient, I want my choice. I want the best qualified individual for my specific condition and to insure a return to a lifestyle commensurate with aging in this century, not the 1950s.

Since cost is issue (openly stated or not), please look to other areas to lower Medicare costs. Fraud and abuse remain rampant and relatively unabated. The big cases make the news. The relatively low dollar amount cases go unchecked or are simple ignored. Attack the problem of cost, fraud and abuse, not turf or unsupported issues of appropriate care or safety.

Thank you for your consideration.

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)
Dear Ms. Norwalk:
I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.
When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.
In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.
To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.
Thank you for your consideration of this serious matter.

Geographic Practice Cost Indices (GPCIs)

Geographic Practice Cost Indices (GPCIs)

After ten years of under payment because of CMS's inaccuracy or error in holding Santa Cruz County within Locality 99 and essentially ten years of over payment to the physicians in Locality 99 with lower cost of care GCPIs; it is time for the Dept of Health and Human Services as CMS to remove Santa Cruz County from locality 99.

There has never been a justification for keeping Santa Cruz within Locality 99 except that the remaining counties would receive less money. An amount of money that the formula says that they should receive.

There are multiple other federal programs which support rural or less serveced counties, the GPCI formula should not be used for this purpose as it was designed to give everyone their fair and calculated cost return for providing the care in their particular locality.

I personally favor option 3 if it can be modified to conform to the recommendation of the GAO report, because the entire central coast of California would be corrected not just Santa Cruz.

Thank you for taking action now!

GENERAL

GENERAL

Dear Sir or Madam:

I am currently a Certified Athletic Trainer working in the role of a physcian extender for an orthopadic clinic. My job roles include application of casts & braces, postop care, suture removal, wound checks, and assisting the surgeons with various procedures. I feel that my Bachelors Degree in Athletic Training did a great job at preparing me for this position, and passing my national certification exam reflects that.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Andrea Nelson, ATC

August 20, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 **RE: CMS–1385–P (BACKGROUND, IMPACT)**
Baltimore, MD 21244–8018 **ANESTHESIA SERVICES**
Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS' proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS' proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.

Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers' services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.

Third, CMS' proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments. Additionally, if CMS' proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America's 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency's acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,

Mr Dennis Conroy CRNA

Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.
In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.
To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.
Thank you for your consideration of this serious matter.

Payment For Procedures And Services Provided In ASCs

Payment For Procedures And Services Provided In ASCs

To whom it may concern.

I am a fellowship trained, board certified Pain specialist. I was previously a Program Director of a ACGME Accredited Pain Management Fellowship so I know the difference proper training makes. Lumping me and my similarly trained colleagues into the same category as others who lack our training and expertise is not fair. My practice offers a comprehensive approach to chronic pain which includes injections, medications, physical therapy, acupuncture, nutrition, massage therapy, and psychotherapy. As such the overhead for my practice is higher than someone who calls themselves a "Pain Doctor" who performs injection procedures in someone else's facility. These "wannabe's" just don't meet the quality of care and expertise someone like myself offers.

Your proposal of lumping everyone who performs these procedures is unrealistic. This whole thing is being driven by the economics. The American population is ageing and with age comes chronic pain. Pain Management is a bonafide subspecialty in medicine. It's not the kind of work you take a weekend course in and go out there and hang up your shingle.

I want to be recognized as "09" as an acknowledgement of the extra training and expertise I have acquired that separates me from the wannabe's. My overhead is higher and so I need to be compensated more for my services. If you continue to reduce my reimbursement for my services, I'll be forced to stop offering them to your beneficiaries. Others like myself across America are already following suit.

I understand your wanting to save money. But forcing your beneficiaries to receive inferior care from inferiorly trained wannabe's is penny-wise and pound-foolish. The United States is a first world nation, not a third world nation.

Thank you for your attention.

Sincerely,

Joshua Greenspan M.D.

GENERAL

GENERAL

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations or they are forced to obtain support from their hospital in order to attract anesthesia providors.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Dear Ms. Norwalk

I am writin to strongly support the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I feel we have long been under valued in our services and yet we have been held hostage by hospitals and surgeons who demand we accept medicare patients. These other parties have found medicare reimbursment profitable while anesthesia fees frequently don't cover the cost of a crna. This has meant the we care for and take responsability for medicare patients without any compensation.

Thank you for your consideration in this matter.

Sincerly
Chance Juenger M.D.

Issue Areas/Comments

GENERAL

GENERAL

Dear Sir or Madam:

My name is Meg Schneider and I am a certified Athletic Trainer for the Dalton School in New York, NY. I have a bachelor's degree in sports medicine and I have a master's degree in exercise physiology. I cover the medical coverage for all high school athletes at my school and work very closely with other ATC's who work for high schools through hospitals. My school is fortunate enough to afford an ATC directly through the school. Other schools may not have that luxury and hire ATC's through a hospital or clinical setting. If these ATC's were not available, this would be a great disservice to all high school athletes.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Megan Schneider, MS, ATC

Issue Areas/Comments

GENERAL

GENERAL

Thank you for the opportunity to submit comments on the Physician Self-Referral Provisions of CMS-1385-P entitled Medicare Program; Proposed Revisions to Payment Policies Under the Physician Fee Schedule for Calendar Year 2008. I am a board-certified pathologist and a member of the College of American Pathologists. I practice in [include city, state of your primary practice area] as part of [include a description of your pathology practice, whether you are a solo practitioner or part of a 5-member pathology group and whether you operate an independent laboratory or practice in a hospital or other setting.]

I applaud CMS for undertaking this important initiative to end self-referral abuses in the billing and payment for pathology services. I am aware of arrangements in my practice area that give physician groups a share of the revenues from the pathology services ordered and performed for the group s patients. I believe these arrangements are an abuse of the Stark law prohibition against physician self-referrals and I support revisions to close the loopholes that allow physicians to profit from pathology services.

Specifically I support the expansion of the anti-markup rule to purchased pathology interpretations and the exclusion of anatomic pathology from the in-office ancillary services exception to the Stark law. These revisions to the Medicare reassignment rule and physician self-referral provisions are necessary to eliminate financial self-interest in clinical decision-making. I believe that physicians should not be able to profit from the provision of pathology services unless the physician is capable of personally performing or supervising the service.

Opponents to these proposed changes assert that their captive pathology arrangements enhance patient care. I agree that the Medicare program should ensure that providers furnish care in the best interests of their patients, and, restrictions on physician self-referrals are an imperative program safeguard to ensure that clinical decisions are determined solely on the basis of quality. The proposed changes do not impact the availability or delivery of pathology services and are designed only to remove the financial conflict of interest that compromises the integrity of the Medicare program.

Proposed Elimination of Exemption for Computer-Generated Facsimiles

Proposed Elimination of Exemption for Computer-Generated Facsimiles

To Whom It May Concern:

I am writing on behalf of DuPage Medical Group, Ltd a 250 physician-owned multi-specialty group with 34 office sites in DuPage, Will and Kane Counties in Illinois. Currently we care for about 25% of all DuPage County residents. We provide over one million patient visits on an annual basis.

Recently we began our implementation of an electronic medical record and fully intend to implement an e prescribing solution. While we support the mandate to make electronic prescriptions the standard for the country, we believe that the January 2009 date is too soon. This date would place an undue hardship on providers like us who are still planning for and implementing an EMR system with all of its functionality. Additionally since the facsimile solution would not be a viable interim solution for us, it would further delay our ability to provide our patients with the convenience of electronically delivered prescriptions, since we would have to wait until our e-prescribing functionality was fully operational. We are also concerned that the elimination of the facsimile solution means that it cannot be used as a back-up in the event that the e-prescribing system is not functioning. We believe that computer-generated faxing should still be allowed, even after the final ePrescribing requirement date, in the event of a system failure.

Thank you for your consideration of these comments. Please feel free to contact me if you have any questions regarding this matter. I can be reached at 630-942-7962. My email address is mark.daniels@dupagemd.com

Sincerely,

Mark Daniels, MD

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)
Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

RE: Resource-based PE RVUs for photopheresis (CPT 36522)

For my treatment-refractory cutaneous T-cell lymphoma patients with serious debilitating skin manifestations, extracorporeal photopheresis therapy is highly effective, and enables the patient to return to a more normal, productive life.

Unfortunately, because of the current and proposed reimbursement rates, I continue to be unable to treat these patients in my office, despite the fact that it is more convenient and poses less risk for infection than in a hospital setting. The direct cost for disposable supplies and drugs used for each procedure is more than $1,200; the cost of the procedural kit alone is $1,100. Add to this the cost for a nurse specialist to administer this 3 ½- to 4-hour procedure, and I am faced with the fact that that the current practice expense reimbursement of about $1,320 scarcely covers my direct cost only. There is no compensation for any overhead costs, which include not only office overhead but equipment service costs and the requirement to purchase a back-up photopheresis machine. At the proposed 37 RVUs for practice expense, I could provide this service only at a substantial loss.

Currently, there are only two hospitals that offer photopheresis therapy that I can refer my patients to; both of these hospitals are in the city of Detroit, a minimum of 20 miles for those patients in the closer surrounding suburbs. This creates a significant added burden for patients who require periodic scheduled treatments, who must travel many miles, especially older patients not familiar with the area.

By encouraging physicians to provide photopheresis in their offices, not only would the quality of the patient experience be greatly improved, I assume that Medicare expenses would very likely be reduced as opposed to the hospital-based treatment setting. Therefore, CMS needs to significantly increase the valuation or reimbursement of photopheresis to make it feasible to offer this important treatment in a physician office or clinic.

If you have any questions regarding this important subject, please do not hesitate to contact me.

Sincerely,

George J. Murakawa, M.D., Ph.D.

Issue Areas/Comments

Background

Background

Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under
CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for
Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of
private market rates.
Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007.
However, the value of anesthesia work was not adjusted by this process until this proposed rule.
Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be
reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,
MAJ Robert Ladd CRNA

How can you expect a doctor of chiropractic to properly assess a patient's spine, especially if elderly, without adequate x-rays. If an orthopedist saw a patient with low back pain and did not x-ray the patient, he would be accused of malpractice. This policy of not honoring x-rays taken or ordered by a Chiropractor who has been well-trained in x-ray taking and reading is blatant discrimination!! The ones to suffer by it are the unsuspecting patients. Disgraceful. What bozo introduced this bill?

My Subaru dealership charges me more per hour to work on an inanimate car than Medicare pays me (an anesthesiologist) to care for live (and often very ill) people. THAT'S NOT RIGHT.

Following is a joke circulating the internet. I think the explanation is clear:

--- Original Message -----
Subject: Funny, but how true

Two patients limp into two different medical clinics with the same complaint. Both have trouble walking and appear to require a hip replacement.

The first patient is examined within the hour, is x-rayed the same day and has a time booked for surgery the following week.

The second sees his family doctor after waiting a week for an appointment, then waits eight weeks to see a specialist, then gets an x-ray, which isn't reviewed for another week, and finally has his surgery scheduled for six weeks from then.

Why the different treatment for the two patients?

The first is a Golden Retriever.

The second is a Senior Citizen.

? First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
? Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
? Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,
Roy Karle CRNA MS

Coding--Multiple Procedure Payment Reduction for Mohs Surgery

Coding--Multiple Procedure Payment Reduction for Mohs Surgery

I am writing this letter to express my deep my concern regarding the proposed removal of the Mohs Surgery codes from the MPPR exemption list. I believe this proposed rule change would adversely affect the healthcare of U.S. citizens while increasing costs at the same time

Mohs micrographic surgery is the gold standard (cure rate of 98-99%) among treatments for skin cancer. As a brief review, these are steps involved in the process to treat each skin cancer. The Mohs surgeon removes the obvious skin cancer and the tissue is processed in the lab that is at the office. After it is processed in the lab, the Mohs surgeon examines 100% of the cancer margin. If there is any cancer left, it is carefully mapped and more tissue is removed only where there is still cancer present. This process is repeated until all the cancer has been removed. Once the removal is complete, the area is reconstructed (stitched) or allowed to heal naturally. There is very little overlap between any of the procedures we perform on a single patient. If I treat two skin cancers, it only requires a little extra time if these are located on two different patients. If they are located on the same patient, some time is saved in checking in and checking out the patient but the work required to remove each cancer is more or less the same. Each has to be evaluated and removed in the manner that is best suited for which type of skin cancer it is and where it is located. The Pathology portion of the process has absolutely no overlap at all as each has to be processed and evaluated independently. I allow a very high percentage of areas to heal by secondary intention (heal naturally) because that is the best option for the patient. It also happens to be extremely cost effective. If a reconstruction is performed, it requires the evaluation of the defect as to which way is best, discussing this with the patient., prepping the site for reconstructive surgery, and the setting up of a whole new sterile surgery tray. Frankly, if I referred the patient out to a plastic surgeon for the reconstruction, it would require roughly the same time for them to do all this. However, it would cost at least 3 to 4 times as much as plastic surgeons usually do their reconstructions in the outpatient OR while we do it in the office. The Outpatient OR is a costly environment. There is a plastic surgeon, an anesthesiologist, and the facility which all will submit their claim.

This rule change will result in many patients having their skin cancers treated one at a time as the reduction will make it prohibitive to treat multiple sites on a single patient. More patients will be referred to plastic surgeons for reconstruction as the reduction will make this prohibitive to do in the office in many patients.

There is little work overlap in treating each skin cancer or reconstructing a site after the skin cancer is removed. It will inevitably result in unintended increased costs to the healthcare system. Worst of all, it will have the greatest adverse impact on patients who are the most vulnerable in society seniors with multiple skin cancers with transportation difficulties and transplant patients with multiple aggressive skin cancers.

I realize that we live in a time where reducing healthcare costs is critical. However, Mohs Surgery is part of the solution, not the problem. Not only is the cure rate higher with Mohs surgery, It cost approximately 70-75% less to treat a skin cancer at a Mohs Surgeon s office than it does if the patient is treated by a physician in the outpatient OR. Leaving apart the fact that the proposed rule change conflicts with the well known requirements for exemption, this change if allowed to occur will result in decreased quality of care while increasing the costs at the same time. Thank you for taking time to consider my concerns. Sincerely, Rajiv Kwatra M.D. 1331 North 7th street, suite 290, Phoenix, AZ, 85006, Phone 6022306744

Coding--Multiple Procedure Payment Reduction for Mohs Surgery

Coding--Multiple Procedure Payment Reduction for Mohs Surgery

I am in opposition to the proposed application of the Multiple Procedure Payment Reduction for Mohs Micrographic Surgery (CPT codes 17311 through 17315).

In the practice of Mohs Surgery, there is little efficiency gained when performing more than one Mohs procedure on the same patient in the same day.

Greater than 80% of the work is duplicated for a second procedure. Aspects of the procedure that do not gain efficiency with multiple procedures are:

1. Pre-service positioning. In many instances, the anatomic location of the tumors requires patient re-positioning for each tumor.
2. Pre-Service scrub, dress and wait time. Each lesion must be separately identified, marked and scrubbed. For lesions on separate anatomic locations, the sterile field created for the first procedure must be broken down and then a new field created for the second cancer.
3. Intra-Service work. Each tumor is dealt with as a distinct entity. Each tumor must be separately anesthetized, and excised. Once the tumor enters the pathology portion of the procedure, there is no efficiency gained in performing multiple procedures. Each tumor must be processed and prepared independently. The interpretation of the tissue for residual cancer and tumor mapping are also independent events for each tumor. For two cancers, this portion of the physician work and practice expense is doubled. As this intra-service work comprises approximately 80% of the total amount of work and resources for the procedure, applying a reduction to the code will significantly undervalue the code. Moreover, of the total intra-service time, the laboratory/pathology proportion consumes the majority of the time and resources of the procedure.

The Mohs procedure may also be accompanied by a reconstructive effort by the same surgeon on the same day of service. The reconstruction is covered under a separate code from the Mohs surgery series of codes. When a reconstruction is performed after the Mohs procedure, there is little efficiency gained. The reconstruction stands on its own as a separate surgical procedure. As the patient has been waiting in the waiting room, the Mohs defect reconstruction contains all of the elements of a stand alone procedure.

1. Pre-Service evaluation. Prior to the reconstruction, the patient must be evaluated to determine optimal wound management. The nature of the wound cannot be known until the completion of the Mohs procedure, thus, there is no substantial reduction in the pre-service evaluation of the reconstruction.
2. Pre-service positioning. Given the long time of the Mohs intra-service work, the patient is removed from the operating table and waits in the waiting room during the Mohs intra-service work. Once the Mohs procedure is complete, the patient must be repositioned for reconstruction.
3. Pre-service scrub, dress and wait time. Given the long time of the Mohs intra-service work, the area must be scrubbed and prepared as if it where a new surgical procedure.
4. Intra-service time. The intra-service time and resources for the reconstruction is not reduced by the prior Mohs procedure. The area must be re-anesthetized as any anesthesia from the Mohs procedure is inadequate for the reconstruction. Additionally, separate and additional instrumentation is required for the reconstruction.
5. Post service time. The post service time is not reduced by the Mohs procedure as the post service work is now dictated by the reconstruction.

In summary, given the significant duplication of work and resource utilization when a subsequent procedure is performed in conjunction with Mohs surgery, applying the Multiple Procedure Payment Reduction for Mohs Surgery (CPT 17311- 17315) will significantly undervalue the codes.

I would ask that you reconsider removal of the Mohs Surgery codes from the exempt list and retain their longstanding exemption from the multiple procedure payment reduction.
Sincerely,
Brent Moody, MD

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations. In Utah this has definitely been a big problem for the southern end of the state.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Respectfully submitted,

Barry Bergquist, M.D.

Issue Areas/Comments

GENERAL

GENERAL

Dear Sir or Madam:

My Name is Amanda Little and i am a certified athletic trainer (ATC). I graduated with a bachelors of science from Eastern Illinois University. I have been licensed as an ATC since 2003. I currently work for AthletiCo as an outreach ATC.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Amanda Little, ATC (and/or other credentials)

August 20, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Sincerely,
James Walker, M.D.

Ms. Leslie Norwalk, JD
Acting Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES

Dear Ms. Norwalk:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

GENERAL

GENERAL

Dear Sir or Madam:

My name is Daniel Golden and I am an Athletic Training graduate from Western Illinois University. I am currently working as an Intern for AthletiCo while I await the results of my NATABOC exam.
I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restriet their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Daniel Golden, ATS

Physician Self-Referral Issues

To:Mr. Kerry N. Weems
Administrator - Designate
Centers for Medicare and Medicaid Services
U.S. Department of Health and Human Services
Attention:CMS-1385-P
P.O. Box 8018
Baltimore, MD 21244-8018

I would like to comment on the July 12 proposed 2008 physician fee schedule rule, specifically the issue surrounding physician self-referral and the "in-office ancillary services" exception.

I am a practicing physical therapist in Sioux City Iowa. I recently opened a private practice in an area that was underserved, 8 months ago. I had been working in another city approximately 40 miles from Sioux City for 12 years, during which a large orthopedic group in Sioux City, referred me patients. While there I established a good working relationship with these doctors. Once opening my clinic in Sioux City, this same group which owns there own in house PT facility no longer referred patients to me. They also ended up putting another PT/ortho doctor clinic approximately 3 miles from my clinic 5 months after I opened. It has been quite difficult establishing patients. I continually market the family practice physicians, and other physicians not affiliated with this group to build new relationships and establish patients.
I am not afraid of competition but I would like an equal playing field. I believe it is in the patients best interest for them to recieve care where they want and they are given the opportunity to choose whom and where they are seen. With the current arrangements of the "in-office ancillary services" the patients are not given that option readily without being swayed to stay "in-house."

The "in-office ancillary services" exception is defined so broadly in the regulations that it facilitates the creation of abusive referral arrangements that have affected me directly.
I believe it is in the best interest for the patient that PT services should not be permitted under the in-office ancillary exception.

Thank you Administrator-Designate for your time in this very important issue.

Sincerely,
Blake D. Wagner,PT

Physician Self-Referral Provisions

Physician Self-Referral Provisions

As a physical therapist employed in a Physician owned practice for the last 10 years I can honestly say that therapy services should remain in the In Office Ancillary Services Exemption under the 'Stark' regulations. To remove physical therapy would deprive patients of services that are provided with the highest level of coordination between surgeon and therapist. This direct line of communication and teamwork provides the most comprehensive treatment program the client can receive. The specialization of the therapists coupled with the Board Certifications of the Physicians can not be found in other arenas.

The letter campaign by the American Physical Therapy Association (APTA) is not representative of the entire membership. I am a member in good standing of the APTA I cannot agree with their wishes. I urge you to preserve the current process.

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

As it stands this practice appears not only unethical due to financial gains involved, but also a contributing fator to the increasing health care costs which often leads to uninsured Americans. Insurance companies increase costs by hiring staff to police the abuse that is occurring and therefore past the cost to the consumer. This, coupled with the rising number ofcliams, leads to unaffordable insurance premiums for many. There are no checks and balances regarding physicians who profit from owning thier own therapy facilities. Due to the lack of checks and balances, corruption is promoted and the MD in essence owns the entire chain of medical care. This is indeed the case when the physician is able to own the MRI, pharmacy, x-ray and lab. The entire health care market share is being monoploized. How is it that a MD can no accept lunch or dinner paid for by drug reps, but can make millions of dollars on PT which was ordered by the owner of the therapy clinic?

We would like to think that the oath that all physicians take upon getting licensed would promote quality patient care, strong ethical pratice and the desire to compassionately serve humankind. As we have seen over in England in recent events, where 5 doctots attempted to blow up cars, potentially taking the human lives they vowed to save, some MD's are swayed by elicit behavior. This is obviously an extreme, however can not be disregarded when viewing the deviaiatons that can occur from the oath of conduct taken by phsycians.
Is the system being abused when a doc directs care and gives the uneducated consumer no choice? The fact is that the consumer does not even realize they do have a choice for care when given a PT order by a MD who refers to his own practice.
Being an owner of an outpatient therapy clinic I have seen first hand the gross over utilization of therapy over the past several years. Patients will consistently recieve thearpy whether it is medicall necessary or not. Current and past patients have expressed the displeasure the referring physician has when it is discovered they are not going to their clinic. At times, no further orders have been given dispite my recommendation to continue.
Complaints about increased malpractise, rising and unaffordable health care costs and the inereasing number of uninsured Americans will only continue to rise at this rapid rate as the abuse continues. A check and balanee system must be put in place to address this crisis. By eliminating in office ancillary services is only one way to create such a system.

Resource-Based PE RVUs

Resource-Based PE RVUs

Dear sirs: The T wave alternans study is a complex text that requires about 45 min. to 75 min. of my time to perform. It involves reviewing a pt's entire cardiac hx, controlling the treadmill (or infusion) to maintain a narrow range of heart rate, and then making a complex determination from multiple data sets as to whether the test is negative or not, and whether the data is valid, and then using that data to make a potential life saving decision whether or not to place an ICD. The test often must be repeated one or two times in order to achieve a valid study, and even then, results are often reviewed with colleagues before a final determination is made. The test is performed in a very limited number of patients, I anticipate performing it no more than 4 or five times a month. The test allows us to identify those patients at most risk for sudden death, and serves as a strong negative indicator for ICD implant when negative, thus saving unnecessary ICD implantations, in turn saving a great deal of money. Please consider adjusting reimbursement to reflect the time the test eonsumes, the complexity of its performance and interpretation, and the profound impact it has on patient management. Thanks.

Background

Background

August 20, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am impressed that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is poised to taking steps towards address this issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, primarily due to the significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

The RUC has recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your attention.

Background

Dear Administrator:

As a practicing Nurse Anesthetist I support the Centers for Medicare and Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. This boost would increase our present conversion factor by 15% in 2008.

This increase will give our profession the ability offset cost to provide anesthesia services to the uninsured or underinsured patients. In addition, it will increase the relative anesthesia value of anesthesia that was taken away in 2007.

If this proposal is not enacted Congess will make furthers cut to our reimbursement to conversion factors that were seen in 1992. Is that fair!

In closing I wanted to thank the CMS's acknowledgement that CRNA anesthesia services are undervalued and its proposal to increase the valuation of anesthesia work in a manner that increases Medicare anesthesia payment

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

Thank you for allowing me to let you know that I strongly support the proposal to increase payments for anesthesiology services under the 2008 Physician Fee Schedule. Fortunately and rightly so, CMS has recognized the gross undervaluation of anesthesiology services, and the Agency is addressing this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesiology care, not recognizing the equal value of anesthesiologists services compared to our peers work in other medical specialties. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services has now reached a level ($16.19 per unit), that no longer covers the cost of anesthesiology care for seniors. This creates an unsustainable system forcing anesthesiologists away from areas with a disproportionately high Medicare population.

The RUC recommended that CMS increase the anesthesia conversion factor to rectify a calculated 32 percent work undervaluation a move that would be a major step forward in correcting this long-standing undervaluation of anesthesiology services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients continue to have access to expert anesthesiology medical care, I ask CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

My name is Eric Armstrong. I recently graduated from King's College in Wilkes-Barre, PA with a degree in Athletic Training. I am currently a NATABOC certified Athletic Trainer.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Eric Armstrong, ATC

RE: CMS-1385-P (BACKGROUND, IMPACT)ANESTHESIA SERVICES

Dear Administrator:

As a member of the American Association of Nurse Anesthetists(AANA), I am writing to support the Centers for Medicare & Medicaid Services(CMS) proposal to boost the value of anesthesia work by 32%.

Under CMS's proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008. (72 FR 38122, 7/12/2007) If adopted, CMS's proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons:

First, as the AANA has previously reported to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for
Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for MOST HEALTH CARE SERVICES AT APPROXIMATELY 80% of private market rates, but reimburses for ANESTHESIA SERVICES AT APPROXIMATELY 40% of private market rates.

Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most of the other Part B providers's services were reviewed and adjusted in previous years, and those adjustments took effect in January of 2007.

Third, CMS's proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which has fallen far short of inflationary adjustments. Additionally, if CMS's proposed change is not enacted, and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% BELOW 2006 payment levels, and more than ONE-THIRD BELOW 1992 payment levels (adjusted for inflation).

America's 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically
underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them.

I support CMS's acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,

Amy Streitman, CRNA, MS

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Unfortunately, the current loopholes in the Stark Laws provide an economic incentive that facilitates increased healthcare utilization while, at the same time, sacrificing positive patient outcomes. While in-house physical therapy services seems like a cost-efficient collaborative effort that would provide convenient patient care with improved outcomes. However, the Office of the Inspector General found widespread abuse (millions of dollars in appropriately billed) with no sign of improved outcomes.

Physical therapy is a profession in and of itself and cannot be "ancillary" to another provider. When put in this position due to the current healthcare environment, patient care becomes more expensive because physical therapists are not allowed the autonomy necessary to effectively treat the patient in an efficient manner. Cost-efficient care actually hurts the business in this case by reducing the amount billed and the amounted collected. Furthermore, "ancillary" services are inherently subservient in nature and do not allow for proper collaboration between professions.

Physician-owned physical therapy sevices are create anti-trust issues by not allowing a competitive market within physical therapy. The patient will simply be directed to another part of the office or down the hall instead of being given a referral that could be taken to any licensed physical therapist. Physician-owned physical therapy services create a closed system that actually restricts patient choice and does not allow the patient to take ownership of their healthcare needs.

From a practical standpoint, the physical therapists who work at in-house physician owned physical therapy services do not typically hold board certifieations or prominent positions within the profession. As you can see, this set-up is truly referral for profit and not at all beneficial to the patient.

Physician-owned physical therapy services create a revenue stream coming and going. The patient is referred to the physical therapist which drives physician profit. Then, if the patient does not get better, the physician will make money on the surgery. Following the surgery, the physician will further his/her economic gain with a referral back to physical therapy for post-operative rehabilitation. As you can see, this does not facilitate efficient patient care. It facilitates expensive patient care at the detriment to the patient.

Not only do these set-ups drive up the cost of physical therapy services by placing them in a subservient role and rewarding poor patient outcomes with surgery and more physical therapy, it also increases physician surgical rates. Instead of an independent physical therapist earning a reputation by achieving positive outcomes with conservative care via unbiased critical thinking and true collaboration, the "ancillary service" will treat as directed without true autonomy and feed the orthopedic surgeons surgical juggernaut.

At Harris County Hospital District we are implementing a system to integrate physical therapists into our community health centers. The US Military, Veterans Administration in Salt Lake City, Kaiser Permanente, and the british healthcare system have learned that integrating the physical therapist onto the primary care team as an autonomous practitioner actually improves outcomes and decreases costs. As you can see, this puts the physical therapist in a role to achieve quality patient outcomes and reduce costs. Unfortunately, the current Stark Law facilitate poor patient care and increased healthcare utilization.

I thank you for your time and support in eliminating this loophole and ELIMINATING physical therapy a designated health service (DHS) furnished under the in-office ancillary expeception. Please support legislation that encourages quality patient outcomes in a cost-effective manner. Remember, collaboration results in quality care, but subservient systems with overt economic gain cannot be allowed.

Dear Sir or Madam:

My name is Amanda Youse, and I am a certified athletic trainer currently employed in the occupational setting. I am both a nationally certified ATC and a Pennsylvania State Licensed athletic trainer.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Amanda P. Youse, ATC

GENERAL

GENERAL

My impression is that if anesthesia reimbursement is not addressed, anesthesia providers will have a difficult time continuing service. Because we have no control over patient selection, the long term for anesthesia residencies will be adversely affected. There are multiple other career opportunities available to the best students and call, nights, and weekends/holidays are not necessary. I did not go into anesthesia for money. I thoroughly enjoy what I do. But the long term provision of medical services will be significantly and adversely affected if the anesthesia disparity is not realistically addressed. Thank you for correcting this disservice. Sincerely, Donald M. Lane M.D.

Background

Background

August 20, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,
Terence J Burrows CRNA, MSN

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia paymcnts under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Dear Administrator:

Please support the proposal CMS-1385-P (Background, Impact) for Anesthesia Services.

The proposal would increase (for the first time since 1992!) the work value for anesthesia providers by 32% and increase the anesthesia Conversion Factor by 15% for CRNAs in 2008.

CRNAs provide on the order of 27 million anesthetics per year in the USA in every type of anesthesia setting. And we provide the majority of anesthetics in rural and underserved areas of our nation.

It is very important this proposal be passed so CRNAs can continue to provide the same high quality anesthesia care Americans have benefitted from in the past, and which they continue to expect and deserve.

Thank you for your attention to this vital issue.

And thank you for serving our nation in your vital position.

Coding--Multiple Procedure Payment Reduction for Mohs Surgery

Coding--Multiple Procedure Payment Reduction for Mohs Surgery

As a Mohs micrographic surgeon in Portland, Oregon, I am writing to express my deep concern regarding the planned change in Medicare reimbursement policy that will adversely impact my ability to provide care for my Medicare patients. Mohs micrographic surgery is a common way of treating some of these cancers and is considered the gold standard among treatments for skin cancer, allowing the physician to examine 100% of the cancer margin to insure complete removal of the cancer with loss of as little normal skin as possible. Mohs surgery is an outpatient procedure that utilizes onsite laboratory analysis of excised tissue while the patient waits for the results. The critical component of Mohs surgery includes meticulous removal and microscopic examination of the entire edge and deep margin of the cancer, in which the same physician serves as both surgeon and pathologist. The exemption of the Mohs codes from the MSRR has been maintained by CMS since 1992 and was not questioned during the CMS mandated five-year review of the Mohs codes undertaken last fall or during presentation of the new Mohs codes to the AMA RUC in October, 2006.

I was notified of a planned change in payment policy that in my opinion has the potential to negatively impact the care of my patients and could add significant cost to an already stressed healthcare budget. This planned change would remove Mohs surgery from a long-standing exemption from the multiple surgery reduction rule (MSRR, indicated by CPT modifier -51). The change proposed would eliminate the exemption and decrease reimbursement by 50% for either the Mohs excision or for the associated repair, and for Mohs excision of any additional cancers treated on the same day; such a decrease in reimbursement would not cover the cost of providing the service. If this proposed change is enacted, I will no longer be able to provide the same kind of high-quality, cost-effective services for my patients in need. I will be forced to change the way I deliver care in order to cover our costs of providing this service.

The consequence of applying the multiple surgery reduction rule to the Mohs codes would be a reimbursement reduction to a value less than the cost of providing the service. Therefore, providers will no longer be able to perform more than one Mohs procedure on any patient on a single day. Multiple tumors are commonly diagnosed on one visit. Treatment of only one tumor per day will inconvenience many patients and their friends and families who accompany them for treatment as they will have to be absent from work more frequently for multiple treatments. More importantly, delays in treatment will further increase risk for high-risk patients such as organ transplant patients with multiple squamous cell carcinomas, and for patients with syndromes such as basal cell nevus syndrome. The MSRR would also apply to repairs performed on the same day as Mohs surgery. According to this new proposal, when Mohs surgery is reimbursed less than a reconstructive procedure on the same day, even the first Mohs code will be subject to the multiple surgery reduction rule. Since costs would not be covered, this may require patients to have their Mohs surgery and their reconstruction done on separate days, or to be referred to other physicians for reconstruction, usually plastic, facial plastic, or oculoplastic surgeons, who work primarily in hospitals or ambulatory care centers where costs of care are higher. The result would be that healthcare costs will be higher than they are under the current policy of payment.

I am asking that you reconsider the proposed rule that would no longer exempt the Mohs procedure codes, 17311 and 17313, from the multiple surgical reduction rule. I am concerned primarily about being able to continue to provide the most optimal, cost-effective care for my patients; if this unexpected change is allowed to take effect, that will no longer be possible.

Therapy Standards and Requirements

Therapy Standards and Requirements

Reference the proposed restriction on CERTIFIED ATHLETIC TRAINERS providing care in CLINICS: it has been our experience that using AT's as well as physical therapists reduces utilization and saves money. Athletic trainers use treatment paradigms that emphasize rapid turnaround to home exercise programs and time goals. Physical therapists benefit from a mixed provider group in the clinic setting. In our experience, PT-only clinics have longer treatment plans and slower conversion to self-directed care

Therapy Standards and Requirements

Therapy Standards and Requirements

Dear Individual,

I am an Athletic Training Student from Marietta College in southeast Ohio. I am working towards my Bachelors in Athletic Training and Health Science. I am senior here and hope to go on to further schooling to sharpen my skills.

I am writing you tonight to tell you that I oppose the therapy standards and requirements for the staffing provsions for rehabilitation in hospitals and all facilites proposed by 1385-P.

Not only is this burdening me in my later profession, but my future patients. What am I working towards if one day I can not work at all.

Within the next year I will be a certified, and licensed athletic trainer. My schooling for four+ years will give me that right. I understand that their are other professions that I could have chosen, but not with this spectrum of care. With the new rules you have set in place, my services are being put on the back burner for individuals you have less experience, schooling, and qualifications that I have worked hard for and earned.

So looking into my future at this point in time it seems like a bleak outlook to fulfill my life goals and work with patients in a health care setting, because of you rules and regulations. I would love to request that you revoke these new rules and reinstate either a revised version or and old version that would give me the future that I deserve.

Thanks for you time,
Jessica Moss Athletic Training Student Marietta College

Re: CMS-1385-P; Proposed Physician Fee Schedule and Other Part B Payment Policies for CY2008
Coding Additional Codes from 5-Year Review

Dear Mr. Kuhn:

I am an echocardiographer/vascular technologist working in a clinical practice in northern Ohio. We provide exams for many Medicare patients, as well as the general population. I am writing this letter to state my objections concerning CMS s proposal to discontinue separate payment for the use of color flow Doppler in our cardiac exams.

Color flow Doppler is an important part of many of our procedures, but not all of our procedures. Pericardial effusion studies, stress echocardiography, and pacemaker synchronization exams often do not incorporate color flow Doppler. But, it is an important part of many of our other examinations. Color flow Doppler requires additional expense for equipment and supplies, as well as additional training for physicians and sonographers. Use of color Doppler adds to the time and complexity of exams.

For these reasons, I ask you to refrain from approving the proposed bundling of color flow Doppler into other echocardiography procedures.

Sincerely,

John B. Keith, BS, RVT, RDMS, RT

Physician Self-Referral Provisions

Physician Self-Referral Provisions

To Whom It May Concern,
I am a physical therapist and co-owner of a private practice with another physical therapist. We have had our doors open for nearly 3 years and have had to struggle immensely with physician-owned PT practices. Our office is located in Miami, FL and in my area I only know of 1 out of ~30-40 Ortho MD's that doesn't have their own PT practiee. This not only affects my office but it doesn't allow the patient to make their own decisions on where they are to receive their PT services. Most of the time they are told that if they don't go the physician's in-house PT practice then they cannot guarantee the results they will receive. Of course the patient doesn't want to upset their doctor and therefore end up in-house. There have been many studies by the AMA and CMS that demonstrate the OVER-UTILIZATION and INCORRECT CODING of PT services in physician-owned PT offices versus private practices. This makes it difficult for me to understand as to WHY this self-referral is allowed to go on. In addition, many MD offices will use unlicensed individuals to perform these services. This whole pracice of self-referrals and unlicensed activity needs to STOP, not only to save Medicare money but also to allow patients to make the best desicions regarding their PT care. Thank you

Re: CMS-1385-P
Anesthesia Coding (Part of 5 Year Review)

Dcar Ms. Norwalk,

I am writing to urge your consideration and support of the proposal to inerease anesthesia payments under the 2008 Physician Fee Schedule. When the RBRVS was institutcd, it created a huge payment disparity for anesthesia services, primarily because of a gross undervaluation of anesthesia work relative to other physician services. Today, Medicare payment for anesthesia care stands at just $16.19 per unit. This does not cover the cost of caring for our nation's seniors and forees anesthesiologists to move away from areas and hospitals with disproportionately high Medicare populations.

In an effort to right this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation. This would increase the payment by almost $4 per anesthesia unit and help greatly in correcting the long-standing inequity in anesthesia payment compared to other specialties. I am grateful that the Agency has accepted this recommendation in its proposed rule and I hope you will support full implementation of the RUC's proposal.

It is vital to ensure our senior citizens have access to expert anesthesia care by implementing the increase in the anesthesia conversion factor recommended by the RUC. This proposal recognizes the importance of our specialty in the overall health care of our seniors. It also helps to recognize and respect the tremendous advances our specialty has made in improving the safety of anesthesia for an ever aging population undergoing more complex procedures all the time.

Thank you for your consideration of this critically important matter.

Payment For Procedures And Services Provided In ASCs

Payment For Procedures And Services Provided In ASCs

Pls don't allow Medicare to add add'l fees for surgical patients needing anesthesia...Patients forego treatment needed because they can't afford to make add'l payments for meds etc. This will be an additional burden on our already over burdened aging population. Our senior population needs our help to insure they get proper & pain free care.

Re: CMS-1385-P

Ancsthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To cnsure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

August 20, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:
My name is Tony Benz and I work in Concord, NC as the director of athletic training in Cabarrus County for NOVACARE rehabilitation. I have been in the field of athletic training for 20 years and have worked in many venues of the field ranging from the coverage of middle and high school sports, the coverage of college athletics and the Olympic Games. I have also worked with and for both Orthopedic Surgeons and Physical Therapists and have earned a Masters degree in Health Science.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.
While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.
As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.
The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.
Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.
Sincerely,
Tony M. Benz, ATC, MHs

P.O. Box 8018
Baltimore, MD 21244-8018

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

This proposal takes on greater importance when one recognizes that there continues to be an ever increasing elderly on medicare. Many in this aged population will require surgery at some time and they are best served with the availability of expert anesthesiology care. (I will be in that group next year.)

Thank you for your consideration of this serious matter.

Background

Background

August 20, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved Ameriea. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

I am a urologist who practices in a group setting in a small town, Kalispell, MT. I am writing to comment on the proposed changes to the physician fee schedule rules that were published concerning the Stark self-referral rule and the reassignement and purchased diagnostic test rules.
The changes propesed in these rules will have a serious impact on the way I practice and medicine as it will prohibit the provision of laser for prostate surgery. It is important for us to be able to provide pateints with the most up to date treatment choices, including laser prostatectomy. The service, wtihout a joint venture between the physicians and the providing laser company may not have been possible to bring to a community our size. Please do not limit the services we can provide to our patients and decrease the quality of care we are delivering. These rules go beyond what is necessary to prevent fraud in the Medicare program.

Respectfully,

Amy McKerrow,MD

Re: CMS-1385-P

Dear Mr. Weems:

I would like to thank you for the opportunity to comment on the Proposed Rule CMS-1385-P, Revisions to Payment Policies under the Physician Fee Schedule, and Other Part B Payment Policies for CY 2008 (the Proposed Rule) published in the Federal Register on July 12, 2007 As requested, I have limited my comments to the issue identifiers in the Proposed Rule.
There are approximately 7,000 physicians practicing interventional pain management in the United States I am included in this statistic. As you may know physician offices, along with hospital outpatient departments and ambulatory surgery centers are important sites of service for the delivery of interventional pain services.

I appreciated that effective January 1, 2007, CMS assigned interventional pain and pain management specialties to the all physicians crosswalk. This, however, did not relieve the continued underpayment of interventional pain services and the payment shortfall continues to escalate. After having experienced a severe cut in payment for our services in 2007, interventional pain physicians are facing additional proposed cuts in payment; cuts as much as 7.8% to 19.8% in 2008 alone. This will have a devastating affect on my and all physicians ability to provide interventional pain services to Medicare beneficiaries. I am deeply concerned that the continued underpayment of interventional pain services will discourage physicians from treating Medicare beneficiaries unless they are adequately paid for their practice expenses. I urge CMS to take action to address this continued underpayment to preserve Medicare beneficiaries access.

The current practice expense methodology does not accurately take into account the practice expenses associated with providing interventional pain services. I recommend that CMS modify its practice expense methodology to appropriately recognize the practice expenses of all physicians who provide interventional pain services. Specifically, CMS should treat anesthesiologists who list interventional pain or pain management as their secondary Medicare specialty designation, along with the physicians that list interventional pain or pain management as their primary Medicare specialty designation, as interventional pain physicians for purposes of Medicare rate-setting. This modification is essential to ensure that interventional pain physicians are appropriately reimbursed for the practice expenses they incur.

***

Thank you for the opportunity to comment on the Proposed Rule. My fear is that unless CMS addresses the underpayment for interventional pain services today there is a risk that Medicare beneficiaries will be unfairly lose access to interventional pain physicians who have received the specialized training necessary to safely and effectively treat and manage their complex acute and chronic pain. We strongly recommend that CMS make an adjustment in its payment methodology so that physicians providing interventional pain services are appropriately and fairly paid for providing these services and in doing so preserve patient access.

Sincerely,

Thomas M. Larkin, M.D.

Payment For Procedures And Services Provided In ASCs

Payment For Procedures And Services Provided In ASCs

As a practicing anesthesiologist my most difficult surgical cases are taking care of older sick medicare patients. They frequently are in the poorest baseline health and are having the most invasive medical procedures, therefore making them the riskiest patients to anesthetize. Currently, Medicare undervalues anesthesia services by an estimated 32 percent. Please rectify this by supporting the RUC's reccommendation to boost the anesthesia conversion factor. Thank you for your time and consideration in this most important issue.

Sincerely,

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

I graduated from Merrimack College, North Andover, MA in 2005 with a Bachelor of Science degree in Sports Medicine. I am a Massachusetts licensed Athletic Trainer who recently relocated to California and currently work as the Head Athletic Trainer at Santa Monica High School.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Shauna Grady, ATC

Geographic Practice Cost Indices (GPCIs)

Geographic Practice Cost Indices (GPCIs)

I am writing in regards to the error of holding Santa Cruz, California in locality 99. Due to the high cost of living and doing business in Santa Cruz, there is no justification in designating it locality 99. It is very difficult at this time to find enough physicians to service our elderly population because they go to other locations which reimburse better and it has caused significant hardship to many of the medicare patients.
I favor option 3 if it can be modified to conform to the recommendation of the GAO report, because the entire central coast of California would be corrected not just Santa Cruz. Thank you for taking action now!

CMS-1385-P-11837-Attach-1.DOC

#11837

08/28/2007

Mr. Kerry N. Weems
Administrator-Designate
Centers for Medicare and Medicaid Services
U.S. Department of Health and Human Services
Attn: DMS-1385-P
P.O.Box 8028
Baltimore, MD 21244-8018

Dear Mr. Weems:

I am a practicing physical therapist with over 30 years of clinical experience. I have had the opportunity to practice in the states of Indiana, Kentucky, Virginia and Michigan. I have a wide variety of work experiences within the field of physical therapy, including working in management. Clinically, I have been fortunate to work in various areas of my profession, including rehabilitation with spinal cord, multi-trauma, head trauma, and CVA (stroke) clients, outpatient therapy, orthopedics, manual medicine, inpatient therapy, and home health care. I have always been proud of and appreciated the opportunities and challenges that physical therapy has provided for me. I am especially grateful for the ability to directly affect the quality of life for many of the individuals I have been fortunate enough to work with. Most recently, I am working in a well equipped and comprehensive private practice clinic staffed by 9 qualified and experienced physical therapists and 7 ancillary/support staff employees.

I am writing to you with concerns regarding the Medicare Program: Proposed Revisions to Payment Policies under the Physician Fee Schedule, and Other Part B Payment Policies for CY 2008; Proposed Rule. I am writing to urge you to support that Physical Therapy services be removed from the permitted services under the in-office ancillary exception. I believe this exception has created a legal "loophole" that has resulted in significant abuse, which has resulted in the expansion of physician owned physical therapy services.

I can site an example of what recently occurred in our clinic. One of our therapists had a new client who was referred by an orthopedic specialist for a routine orthopedic diagnosis. This client was thoroughly evaluated by our therapist in a timely manner (we have been able to schedule most of our new client evaluations within 48 hours of receiving a referral). The client was set up for an appointment to begin actual physical therapy/rehabilitation within a short time following his initial evaluation. However, this client returned for a follow up re-evaluation to his orthopedist's office before his next appointment in our clinic. This orthopedic specialist has a physician owned physical therapy practice adjacent to his office. The physician proceeded to tell the client he "wasn't making progress fast enough in physical therapy" and needed to come to his physician owned clinic in order to receive the proper therapy. The client subsequently called our therapist, explaining what the physician had said. Our therapist contacted the physician's practice and explained that the client had only attended one session for an evaluation and

that he was scheduled to begin his actual physical therapy within the next couple of days. The response from the physician's office was that they wanted the client there in their practice. This client subsequently had to travel approximately 30 miles each way to the physician owned practice rather than 10 minutes to a well-qualified physical therapist who had already evaluated him, set up an appropriate & comprehensive treatment program, and was familiar with his case. In my opinion, there was no logical or appropriate reason for this client to have to travel to the physician owned practice. It did not benefit the client in any way---but I am certain it financially benefited the physician. (An interesting aside question---was this client's insurance charged for both evaluations? How appropriate & cost effective was that?)

Unfortunately, incidences like this are becoming increasingly common as more physicians open physical therapy practices. In talking with clients who are being referred by physicians who own a physical therapy practice, most of them indicate that the physicians encourage them to come first of all to their self-owned practice-even if it requires significant travel time and inconvenience to the patient. It seems that only when the clients ask these physicians for a closer, qualified practice or specifically state that they already know of a qualified physical therapy clinic, do their physicians refer them to a clinic outside of the ones that they own. It seems as if there is a large captive referral base for these physician owned PT clinics. I feel this is an abuse of the system and of no significant benefit to the client. One can only assume that this is being done primarily for financial gain.

Physical therapy services are not routinely needed at the time of the patients visit to a physician. In fact, most PT services are scheduled after the initial physician visit-even at physician owned PT clinics. Physical therapists do not assist the physician in his/her diagnosing process and we are not a needed on-site "emergency" service.

We are licensed professionals, most with Master's or Doctorate level degrees, who do not require or need direct physician supervision to provide qualified physical therapy services. Our expertise & practice is outside the scope of a physician's supervision. We are independent professionals and should remain so.

First and foremost, our primary motivation & concern should be to provide professionally excellent & beneficial physical therapy to our clients in a supportive & convenient manner. There is something terribly wrong in the system when the first & foremost reason & motivation for referral is for financial gain. I again urge you to support that Physical Therapy be removed from the in-office ancillary services exception.

Thank you very much for your consideration in this matter.

Sincerely,

L.E.D., PT
Grand Rapids, MI 49504

As a member of the American Association of Nursc Anesthetists (AANA), I write to support the Centers for Medicarc & Medicaid Services (CMS) proposal to boost the valuc of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensurc that Certificd Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to providc Mcdicare beneficiaries with access to ancsthesia services.
This increasc in Medicarc payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for ancsthcsia serviccs, putting at risk thc availability of ancsthesia and other healthcare services for Mcdicarc bcncficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and othcrs have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) eut to Mediеare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthcsia services depends in part on fair Medicare payment for thcm. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,
Erica Perez, CRNA_____

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Sincerely,
Neil J. Axel, M.D.

GENERAL

GENERAL

Dear Sir or Madam:

My name is Kai Kline and I am the Certified and Licensed Athletic Trainer at Clearwater Central Catholic High School and therapist at CORA Rehabilitation Services. I am a recent graduate of the University of Florida's Graduate Athletic Training Program and four year member of the National Athletic Trainer's Association.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Mr. Kai J Kline, MS, ATC, LAT

Physician Self-Referral Provisions

Physician Self-Referral Provisions

August 29, 2007
Thank you for the opportunity to submit comments on the Physician Self-Referral Provisions of CMS-1385-P entitled Medicare Program; Proposed Revisions to Payment Policies Under the Physician Fee Schedule for Calendar Year 2008. I am a board-certified pathologist and a member of the College of American Pathologists. I practice in Vero Beach, Florida as a solo practitioner operating an independent laboratory.

I applaud CMS for undertaking this important initiative to end self-referral abuses in the billing and payment for pathology services. I am aware of arrangements in my practice area that give physician groups a share of the revenues from the pathology services ordered and performed for the group s patients. I believe these arrangements are an abuse of the Stark law prohibition against physician self-referrals and I support revisions to close the loopholes that allow physicians to profit from pathology serviees.

Other physician groups have seen these arrangements and are actively pursuing similar ones. They believe that because they are generating the revenue stream they then have the opportunity to capture the revenue stream with no risk to them or their practice, in the same way their colleagues have.

Spccifically I support the expansion of thc anti-markup rule to purchased pathology interpretations and thc exclusion of anatomic pathology from the in-office ancillary services cxception to the Stark law. These revisions to the Medicare reassignment rule and physician self-referral provisions arc necessary to eliminate financial sclf-interest in clinical decision-making. I believe that physicians should not be able to profit from the provision of pathology services unless the physician is capable of personally performing or supervising the service.

Opponcnts to thcse proposed changes assert that their captive pathology arrangements enhance patient care. This argument is fallacious, because in reality, in the vast majority of these cases, the execution of pathology services by these physician groups is motivated by profit only and not quality. I agree that the Medicare program should ensure that providers furnish care in the best interests of their patients, and, restrictions on physician self-referrals are an imperative program safeguard to ensure that clinical decisions are determined solely on the basis of quality. The proposed changes do not impact the availability or delivery of pathology services and are designed only to remove the financial conflict of interest that compromises the integrity of the Medicare program.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Physician Self-Referral to physical therapy or occupational therapy may be ethically practiced by a few, but for too many it is nothing more than referral for profit. As a health care professional and an educator of future health care professionals, I am very opposed to physician self-referral because, too often, it results in a lack of quality care and over billing to Medicare for unnecessary procedures. Being intimately involved in the education of DPTs in California, I know the depth and breadth of the education physical therapists receive. As an active member of the APTA and the CPTA, I know that physical therapists are practicing evidence-based practice to provide each and every patient with the best-quality of care known, as well as continued research to expand this knowledge. Additionally, physical therapy interventions are critical to restore function and quality of life, as well as to save the patients and the Medicare system from more costly interventions.

I urge you to remove physician self-referral provisions in order to provide the highest quality of care without unnecessary costs depleting the funds and depriving those that really need our assistance.

Respectfully,
Casey Chaney, PhD, PT, OCS, CSCS
Associate Professor of Physical Therapy Education
Board Certified Orthopedic Clinical Specialist

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strong support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. There are multiple factors that make this issue so important. The fact that since RBRVS was implemented anesthesiologists have been significantly underpaid compared with the rest of the medical doctors as well as getting hit with what amounts to cost-of-living penalties. Even the minimum wage has gone up by a larger percentage.

With the rising number of surgical procedures that can be done to help people that are ever sicker, it seems sad that when doctors -anesthesiologists - are being penalized financially when we take care of the older and sicker people.

My children hear me talk with there mother about this situation and they have asked me why people (the government) would treat doctors this way. I have not been able to give them an answer they will accept. I believe they are learning from seeing and hearing this go on. I wonder what choices they will make in the future. I wonder if they will choose medicine (especially anesthesiology) or if they will become dentists or choose some other job.
I hope that I will be able to tell my children (and wife) that this increase went through and that we are appreciated. Therefore, I ask you to please enact this provision to increase the anesthesia conversion factor increase as recommended by the RUC.

Thank you for reading this comment and for supporting the future of anesthesiology in the United States.

Sincerely,

John Bethea

Geographic Practice Cost Indices (GPCIs)

Geographic Practice Cost Indices (GPCIs)

I would strongly urge CMS to update physician localities to resolve the unfair issues related to area 99. Santa Cruz, CA is currently considered area 99 for physician payment and is not a rural area. The discrepancy between San Jose and Santa Cruz is signficant in physician payment--yet the cost of practicing is the same. We have tried for years to convince CMS/Congress/patients that this is grossly unfair--and as a result we have been underpaid for years. Please equalize the playing field and bring Santa Cruz and other misappropriated communities up to the urban payment schedules that they deserve. Thank you

Background

Background

Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES

Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

_ First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
_ Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
_ Third, CMS proposed change in the relative value of anesthesia work would help to correct the
value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation). America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Re: "TECHNICAL CORRECTIONS"

The proposed rule dated July 12th contained an item under the technical corrections section calling for the current regulation that permits a beneficiary to be reimbursed by Medicare for an X-ray taken by a non-treating provider and used by a Doctor of Chiropractic to determine a subluxation, be eliminated. I am writing in strong opposition to this proposal.

While subluxation does not need to be detected by an X-ray, in some cases the patient clinically will require an X-ray to identify a subluxation or to rule out any "red flags," or to also determine diagnosis and treatment options. X-rays may also be required to help determine the need for further diagnostic testing, i.e. MRI or for a referral to the appropriate specialist.

By limiting a Doctor of Chiropractic from referring for an X-ray study, the costs for patient care will go up significantly due to the necessity of a referral to another provider (orthopedist or rheumatologist, etc.) for duplicative evaluation prior to referral to the radiologist. With fixed incomes and limited resources, seniors may choose to forgo X-rays and thus, needed treatment. If treatment is delayed, illnesses that could be life threatening may not be discovered. Simply put, it is the patient that will suffer as result of this proposal.

I strongly urge you to table this proposal. These X-rays, if needed, are integral to the overall treatment plan of Medicare patients and, again, it is ultimately the patient that will suffer should this proposal become standing regulation.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Please see attached document for comments.

CMS-1385-P-11852-Attach-1.PDF

#11852

Comment on File Code CMS-1385-P, due by 5 p.m. Friday August 31, 2007

Submit electronically to: http://www.cms.hhs.gov/eRulemaking

Issue Identifier: PHYSICIAN SELF-REFERRAL PROVISIONS

We represent a number of clients potentially affected by the amended definition of "entity" in the Medicare Physician Fee Schedule (MPFS) Proposed Rule at Section II.M.22. ("Services Furnished 'Under Arrangements'"), 72 Fed. Reg. 38122, 38186-87, 38224 (July 12, 2007). We urge CMS not to adopt this proposed amendment because it is both overbroad and ambiguous. It will lead to an unnecessary increase in hospital costs, disruption of a number of beneficial arrangements, and increased inefficiency in the delivery system and will create a legion of what appear to be unintended consequences.

A. The Proposed Amendment Fails to Recognize the Benefits of Under Arrangements Relationships.

In the commentary to the MPFS Proposed Rule, the agency expressed concern that certain "under arrangements" relationships between physicians and hospitals may lead to over-utilization and abuse. While there may be instances where such concern is warranted, amending the definition of entity in the manner suggested is not the solution.

CMS has historically recognized that "under arrangements" service agreements between hospitals and other providers lower costs, increase access and serve a number of legitimate goals. CMS's sweeping revision of the definition of "entity" under the Stark Law at 42 C.F.R. 411.351 to include both the person or entity that bills for a Designated Health Service ("DHS") and the person or entity that either performs the service or "causes a claim to be presented for Medicare benefits for the DHS" greatly limits the ability of hospitals to obtain services under arrangements. All "under arrangements" service providers would become "entities" under the Stark Law, and all physician owners of such entities would appear to have prohibited ownership interests. This revision would effectively throw out the baby with the bathwater.

In the MPFS Preamble on "Services Furnished 'Under Arrangements,'" CMS fails to discuss or even acknowledge the benefits of the various physician-owned "under arrangements" providers. The agency should investigate the impact of its proposed amendment in terms of the disruption of care, increase in cost and restrictions on access before taking action. Moreover, it seems more appropriate for the agency to consider whether the perceived problem with under arrangements service agreements could be better addressed with a more limited approach or through changes to other CMS regulations such as those governing a hospital's ability to bill for services provided under arrangements.

B. The Proposed Amendment Creates Unnecessary Complexity and Uncertainty.

The existing definition of an "entity" that is considered to be furnishing DHS under the Stark Law is generally limited to "the person or entity to which CMS makes payment for the DHS." 42 C.F.R. §411.351. Under the proposed revision, an "entity" that is considered to be

furnishing DHS would also include a person or entity that has "performed the DHS" or that has "caused a claim to be presented for Medicare benefits for the DHS." 72 Fed. Reg. 38224 (July 12, 2007). While this new three-part definition of "entity" may result in full employment for health lawyers, it is difficult to see how any perceived benefit would outweigh the increase in confusion and complexity in the application of the Stark Law. For instance, under the proposed definition of "entity," a single DHS referral may cascade into three or more separate referrals to "entities," each of which must be separately analyzed. A provider must consider (or more likely pay a lawyer to analyze) the financial relationships between the involved physicians and the entity billing the DHS, the entity performing the DHS, and anyone who plays any role that could somehow be construed as causing the DHS claim to be submitted.

By including the entity that performs the DHS in the definition of entity, the proposed amendment not only eliminates the possibility of any physician ownership in "under arrangement" providers, but it also raises a host of ambiguities as to the circumstances under which a person is deemed to have provided a DHS. For example, if a service is only a DHS by virtue of being billed as a hospital service, is a person that provides such a service in a non-hospital setting an "entity" under the proposed definition? Is a person who provides a component part (i.e., perfusion services) of a service billed by a hospital as an outpatient or inpatient service an "entity" under the proposed definition?

Perhaps the most ambiguous and potentially disruptive aspect of the proposed amendment to the definition of entity is the inclusion of all persons who *cause a claim for DHS to be presented.* Neither the proposed text of the regulation nor the commentary offer a clue as the intended scope of this provision. It could be interpreted to expand the Stark prohibition far beyond anything that Congress envisioned. If so interpreted, the agency lacks the authority to amend the statutory prohibition in a manner inconsistent with Congressional intent. At a minimum, the "caused to be submitted" standard will add complexity to a statute that already has more than its share. Will all vendors of equipment, supplies, devices, drugs and software be deemed to have "caused a claim for DHS to be submitted" by selling goods or services to a hospital which then uses the goods or services in the delivery of inpatient or outpatient hospital services? If simply selling a good or service to a hospital is not enough to "cause a claim for DHS to be submitted," what is the standard? Will all persons who provide a component part of a service billed by a hospital under a prospective inpatient or outpatient payment rate be deemed to have caused the hospital to submit a claim for DHS? If not, what criteria should one use to determine when a component provider might cause a hospital to submit a DHS claim?

The 2001 Stark II Phase I Final Rule adopted a bright line test for the definition of entity: the entity that bills the Program is the entity furnishing the DHS. Now, six years later, after the industry has relied upon the definition in structuring a legion of financial arrangements, CMS has proposed a new definition that fundamentally alters the analysis of the law and raises far more questions than it answers to boot. The proposed definition should be abandoned because it is ambiguous, unworkable and will cause significant disruption in the health care delivery system.

C. MedPAC Proposal is Flawed.

CMS also solicits comments regarding the Medicare Payment Advisory Commission (MedPAC) March 2005 Report to Congress, which recommended that the Secretary "expand the definition of physician ownership in the physician self-referral law to include interests in an entity that derives a substantial proportion of its revenue from a provider of [DHS]." While the MedPAC Report was published after the close of the Stark II Phase II comment period, CMS notes that certain arrangements structured such that referring physicians own leasing, staffing, and similar entities furnish DHS without submitting claims are already prohibited by Stark Law. We generally agree that revising the definition of "entity," as problematic as that is, is more straightforward than MedPAC's recommendation. Expanding the definition of physician ownership to include interests in entities that derive a "substantial proportion of revenue derived from providing DHS" would disrupt many existing, valid relationships that benefit hospitals and the public, including management services joint ventures that manage physician practices or hospital service lines and joint venture building or equipment leasing companies. Simply put, if the proposed revision to the definition of "entity" would disrupt many valid relationships, the MedPAC recommendation would have an even more pernicious effect on the health care delivery system.

Thank you for your consideration of our comments.

Sincerely,

Davis Wright Tremaine LLP

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Dear Sir/ and or Madame: Regarding GCPIs and Locality 99, it is time for the Dept of Health and Human Services as CMS to remove Santa Cruz County from locality 99.

There has never been any further justification for keeping Santa Cruz within Locality 99 except that the remaining counties would receive less money.

There are multiple other federal programs which support rural or less serviced counties, the GPCI formula should not be used for this purpose, as it was designed to give everyone their fair and ealculated cost return for providing the care in their partieular locality.

I personally favor option 3 since it is my belief that Option 3 sets forth a reasonable change for localities in California but that CMS miscalculated the designation of the new payment localities. It appears that Option 3 of the CMS proposed rule - if correctly calculated - would result in the tri-county area (Santa Cruz, Monterey and San Benito) all being bumped up into a new, fairer payment locality.

Sincerely, Alan Buchwald, M.D., Past President, Santa Cruz County Medical Society, Santa Cruz, California 8/29/07

Physician Self-Referral Provisions

Physician Self-Referral Provisions

With respect to the proposed changes to the set in advance requirement relative to percentage compensation arrangements, the proposal to limit such arrangements to "revenues directly resulting from personally performed physicians services" is too restrictive and will cause hospitals and other DHS entities to waste resources restrueturing numerous, legitimate arrangements. First, there are other legitimate percentage compensation arrangements that use a basis other than a percentage of revenuc, sueh as percentage of charges, percentage of collections, percentage of costs, percentage of third party fee schedules, etc. For instance, this change would eliminate the ability of hospitals to bill globally for a service and pay the physician a percent of its charges. Likewise, hospitals could not pay physicians in gain sharing arrangements based upon a percentage of cost savings. Second, limiting the revenues to "physician services" would eliminate a number of legitimate arrangements whereby DHS entities and physicians are trying to align their financial interest. For instance, even if CMS expands the allowable basis of percentage compensation arrangements to more than revenue, such arrangement would still not be allowed because the physician is being compensated for something other than physician services. Likewise, percentage compensation arrangements for administrative tasks such as management services or medical directorships are often used to minimize the potential outlay by the DHS entity in the event that the physician (or group practice) does not perform at the level anticipated. A flat compensation basis puts the DHS entity at risk for paying more for services than such services are often worth (that is, even if there is a front end fair market value, if the assumptions on which the fair market value was based do not bear out over the term of the agreement the physicians may be get paid more than their effort merits or more than the value of the service to the DHS entity (e.g., if a hospital pays physicians to help develop a spine center and despite the best efforts of the parties the spine eenter is not utilized by patients). Third, if CMS' concern is percentage compensation in equipment and space rental situations, a more effective solution would be to prohibit pereentage compensation arrangements under those speeific exceptions. Personally, I have seen very few percentage lease or space rental agreements and when discussed with clients, they usually agree that these arrangements are too risky from an Anti-Kiekback Statute (AKS) perspeetive. On this note, I would also add that many of the proposed changes to the Stark law seem to be in response to either a lack of enforcement of the AKS or a failure of parties to health care transactions to adequately consider the AKS risks. Although some in the health care industry may applaud CMS' efforts to fill sueh gaps, they are typically motivated to do so in an effort to proteet their own historic turfs given the overall disruption of service locations and providers/suppliers of services in the market and, from a pure policy perspective, given the delineation of ageneies with enforcement responsibility, I would caution against blurring the lines between the two statutory authorities and resist the temptation to turn the Stark law into a cure all for bad actors in the health care industry. The health care industry is in a state of evolution and evolution naturally attracts bad actors; however, regulating to the level of bad actors, will likely stifle innovation which is necessary as health care delivery evolves. With some tweaking the current exceptions provide a good floor upon which good actors can experiment, over regulation will stifle such. AKS enforcement activities and guidance will eventually weed out the bad actors (e.g., 04-17 was the beginning of the demise of pod labs).

These comments are personal and do not reflect the opinion of my firm or any client.

Background

Background

Dear Administrator,

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS' proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS' proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers ean continue to provide Medicare beneficiaries with access the anesthesia services.

This increase in Medicare payment in important for several reasons:

? First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare payment Advisory Commission (MedPAC) and others have demonstrated the Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
? Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
? Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, in CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,

Kyle C. Benedetto, RN, BSN, SRNA

Background

Background

Dear Administrator,

I write to encourage you to support CMS-1385-P. Certified Registered Nurse Anesthetists (CRNAs) are an integral part of America's health care system providing approximately 27 million anesthetics annually. This group of anesthesia practicioners continues to provide Americans with an extremely safe and reliable service.

If adopted, CMS' proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare type B providers could continue to provide Medicare beneficiaries with access to safe and readily available anesthesia services.

Unfortunately, reimbursements have fallen below inflationary adjustments for sometime. If this trend continues it will become ever difficult to ensure that these highly skilled practicioners are available to provide the 27 million safe anesthetics annually.

I urge you to support CMS-1385-P.

Thank you for your attention to this situation,

Mike Carpenter, CRNA

Technical Corrections

Technical Corrections

Centers for Medicare and Medicaid Services
Department of Health and Human Services
Attention: CMS-1385-P
PO Box 8018
Baltimore, Maryland 21244-8018

Re: TECHNICAL CORRECTIONS

The proposed rule dated July 12th contained an item under the technical corrections section calling for the current regulation that permits a beneficiary to be reimbursed by Medicare for an X-ray taken by a non-treating provider and used by a Doctor of Chiropractic to determine a subluxation, be eliminated. I am writing in strong opposition to this proposal.

While subluxation does not need to be detected by an X-ray, in some cases the patient clinically will require an X-ray to identify a subluxation or to rule out any 'red flags,' or to also determine diagnosis and treatment options. X-rays may also be required to help determine the need for further diagnostic testing, i.e. MRI or for a referral to the appropriate specialist.

By limiting a Doctor of Chiropractic from referring for an X-ray study, the costs for patient care will go up significantly due to the necessity of a referral to another provider (orthopedist or rheumatologist, etc.) for duplicative evaluation prior to referral to the radiologist. With fixed incomes and limited resources seniors may choose to forgo X-rays and thus needed treatment. If treatment is delayed illnesses that could be life threatening may not be discovered. Simply put, it is the patient that will suffer as result of this proposal.

I strongly urge you to table this proposal. These X-rays, if needed, are integral to the overall treatment plan of Medicare patients and, again, it is ultimately the patient that will suffer should this proposal become standing regulation.

Sincerely,

Dr Jamal Fakhoury Bsc, DC, FACO, PA

CMS-1835-P
Physician Self-Referral Issues.

Subject: Medicare Program; Proposed Revisions to Payment Policies under the Physician Fee Schedule, and Other Part B Payment Policies for CY 2008; Proposed Rule

Submitter: Kenneth S. Call, PT, DPT

Mr. Kerry N. Weems
Administrator – Designate
Centers for Medicare and Medicaid Services
U.S. Department of Health and Human Services

Dear Mr. Weems,

I would like to share with you how my practice has been affected from the problem of physician self-referral. I opened my outpatient physical therapy practice in 1997 in Kennewick, Washington. During this time I have treated many patients and developed many friendships with patients and the community. Often times when these former patients have an injury they return for care.

In the past few years we have had a few physician groups open physical therapy practices in which they have a financial interest. While this was of concern to me I know I have a good reputation in the community and believe that I will be able to continue providing excellent care to the community.

What surprised me was when I was treating the spouse of a former patient and she told me her husband would be having surgery and coming back in for therapy. Following the surgery I did see that this former patient scheduled to come in for therapy and then his name was removed from the schedule. When I asked if he was ok she related to me the fact that the physician had called this patient at home and told them that if they did not go to his therapist he would revoke the referral and discharge the individual as a patient with no further care provided.

While this is just one example of the abusive nature of physician referral for profit I have had several of the other local physical therapists contact me and ask what we can do to fight this problem as they have seen their referrals reduces as well. I have encouraged them to educate their patients that they do have a choice as to where they receive therapy and to continue providing the excellent care they know how as well as to contact CMS with how they have been affected by this same practice by physicians.

It is my hope that CMS will address the physician self-referral law and reduce or eliminate this practice.

Thank you for your time,

Kenneth S. Call, PT, DPT

Technical Corrections

Technical Corrections

Dear Sir or Madam,
This is a technical correction for file code CMS-1385-P.
It has come to my attention that certain lawmakers have proposed to cut Medicare reimbursement of x-rays taken at a radiological facility, when ordered by a doctor of chiropractic.
Although the intent of this proposed rule is unknown, I can assure you that the outcome will be very unfavorable to the senior citizens of this country. I am a third generation chiropractor, and can relate some of the history of this issue with you. Doctors of chiropractic have always been considered "gatekeeper status health care providers from the time of the earliest formation of the state licensing boards of chiropractic to today. The three licensed primary care providers are medical doctors (M.D.), osteopaths (D.O.), and chiropractors (D.C.). All doctorate level programs are similar in duration, course of study, and clinical knowledge. To discriminate against one or prefer one of these groups over another is a personal issue based on philosophy of health, rather than science.
Please consider that you are dealing with doctorate level, gatekeeper status health care providers when creating and/or changing laws that pertain to the profession.
The proposed decision to stop reimbursing Medicare patients for x-rays will not directly affect the doctors of chiropractic - however, it will directly affect the senior citizens on a limited income, and this is why: Chiropractors are not currently reimbursed from Medicare for x-rays taken at our office.
However, it has been our right, (and I maintain that it will always be our right) as licensed primary care providers to refer a Medicare patient for x-rays when needed, and that Medicare will reimburse the radiological clinic for those services.
Any change to cut this policy would only serve to take more money out of seniors' low, fixed incomes, and demonstrate a lack of understanding of the status of doctors of chiropractic as laid out by the state licensing boards of this country.
Thank you for your time and consideration in this matter.
Sincerely,
Dr. Jedidiah T. Smith
Anchorage, Alaska

RE: CMS-1385-P (BACKGROUND, IMPACT)
ANESTHESIA SERVICES

Dear Ms. Norwalk:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS' proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS' proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

- First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
- Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers' services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
- Third, CMS' proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS' proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America's 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency's acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to inerease anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from arcas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

My name is Fran and I am a physical therapy student in NY. I have just recently started school but have worked for the past two years in a physician owned out-patient orthopedic physical therapy clinic as an athletic trainer. My undergraduate degree was in Kinesiology but my focus was in athletic training which led me to my certification four years ago. Unfortunately I feel that the profession of athletic training is in jeopardy and am uncertain about the future of its practice. I take great pride in being an athletic trainer and want it to be known that they are a great addition to the medical profession and need to be secured within the health care realm.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,
Fran

Issue Areas/Comments

Background

Background

Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services. This increase in Medicare payment is important for several reasons.

ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.

ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.

ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,

Gene Tyler McDonald, CRNA

Physician Self-Referral Provisions

Physician Self-Referral Provisions

I am a physical therapist who has been practicing for over 20 years and I have been a business owner of an orthopedic PT clinic for over 10 years. Quality patient care has always been my primary goal and minimizing costs to patients is part of that goal. Within the last 4 years we have had a physician-owned practice open 2 offices within 10 miles of my clinic. We have encouraged our patients to chose where they wanted to attend PT, just as they can chose what pharmacist to fill their medical prescriptions.

Scenario 1 - We had a patient who was very happy with our services but she knew she was going to need surgery to repair her dysfunction. She knew she could return to our clinic after surgery. When she went to the surgeon, who owns a physician-owned PT practice, he told her he would not do the surgery if she returned to our clinic. She was forced [blackmailed] into attending PT at his facility is she wanted to have her surgery done. She was not able to return to our office.

Scenario 2 - we had a patient that we had seen in the past, who had been very pleased with our services. The patient went to the orthopedic surgeon who had a physician-owned PT practice, who recommended continued PT. The MD wanted the patient to attend PT at his facility 'so he could keep better control on what gets done'. Per MD advice, the patient did begin at his PT facility. After 1 month, upon recheck with the MD, the MD ordered continued PT. The patient told him he wanted to return to our facility [the patient preferred the quality at our facility versus the MDs]. The MD told the patient that if he were going to attend PT at our facility, he would discontinue PT. If the patient wanted to continue at his office, he could.

We have seen NUMEROUS cases where the MD [owner of a physician-owned PT practice] strong-armed the patient into attending PT at his facility. The patient was not given a choice. This is certainly not in the financial interest of the patient or any insurance company. We have also had patients return to our facility for the quality care. Despite my being a business owner, I am a physical therapist first and appropriate care is always the most cost-effective. It is ALWAYS less expensive to do the job right the first time than to have to correct mistakes later, whether the mistake is made by a PT, MD or the patient.

There is not a doubt in my mind that you have seen an increase in PT charges since the number of physician-owned PT practices has increased. I certainly hope that you have or will track charges in physician-owned practices versus PT-owned and take action accordingly. Most of these physicians are not looking out for the interest of their patients, but rather the interest of their bank accounts.

Coding--Multiple Procedure Payment Reduction for Mohs Surgery

Coding--Multiple Procedure Payment Reduction for Mohs Surgery

The exemption of Mohs Surgery from the MMPR has resulted in the evolution of skin cancer care from an inpatient procedure with general anesthesia to an outpatient procedure done in physicians offices under local anesthesia. Cure rates are excellent, and functional and cosmetic outcomes have improved with this exemption . Fairness, when looking at the separate nature of Mohs for more than one lesions, or of Mohs and a repair, would dictate that this exemption should continue.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Please take this email seriously. Our livlihood and our ability to continue helping people on a daily basis is in grave danger. Physical Therapists and Physical Therapists ONLY should own and operate PT clinics. Physicians should not have ownership or have the ability to employee PT's just as we should not own physician practices! If the physician truly 'wants the best care for their patients' then all they have to do is create a relationship with a great PT in their area to refer to. It's that easy. Instead they open PT clinics or employ PT's to work for them. They don't attempt to find the best PT to deliver great care, they hire the most inexperienced and most importantly the cheapest PT they can find. Then, they have them see as many patients as possible in a day. This is the best combination for the physican to make money. This ability to allow physicians to own PT's and make money off them gives them unlimited opportunity for patient abuse. Suddenly, most, if not all of their patients need PT. Just because everyone in medicine is experiencing cut backs in reimbursements, why should PT's provide more income to the physician? The physician is already making an income that the PT can't even dream about. I have been a private PT practice owner since 1985. We have gone through many bouts of physician owned practices that have detrimentally effected us. We work very hard to do the best for our patients and keep our physicans who refer to us happy with our care. It is hard work and rewarding. Many years ago we had a thriving practice, very dedicated PT's and were helping many patients. Overnight, a handful of our physicians who referred to us openned their own PT clinic. We lost 40% of our patients in a matter of days. We lost a clinic, a business and in the end, it was the patients who lost the most. It wasn't that we all of a sudden gave bad care. It was pure greed on the part of the physician. Please help us keep our profession in the hands of the Physical Therapist and allow us to continuing helping our patients. Thank you.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

My name is Jessica Dettore, I have been an athletic trainer for the past 5 years. I have worked in the high school setting for the past three years and care for the high school and middle school athletic programs in the prevention and treatment of injuries. I have a Bachelor's degree in Athletic Training and a Masters in Education Administration. I enjoy my job as an athletic trainer because of the rewards you receive getting a player back out onto the field following an injury.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Jessica Dettore ATC, MEd

Therapy Standards and Requirements

Therapy Standards and Requirements

Dear Sir or Madam:

I am an assistant professor at the University of Houston, Department of Health and Human Performance. I have practiced as an athletic trainer and physical therapist in several different settings, including as a 'physician extender,' or in-office ancillary service. I have a doctorate in kinesiology, and I am the author of a textbook on medical pathology that is currently widely used in university athletic training education programs.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting. In particular, I believe that these proposed rules will increase the lack of access to health care for many patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. As I am credentialed as both an athletic trainer and physical therapist, I can assure you the services offered by each profession differ in material ways. Athletic training education, clinical experience, and national certification exam ensure that patients receive quality health care. State laws, hospitals, and medical professionals have deemed athletic trainers as qualified to perform these services. The proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known. It is irresponsible to further restrict their ability to receive those services. The flexibility permitted by current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients that receive the best and most cost-effective treatment available.

CMS seems to have come to these proposed changes without clinical or financial justification. I implore the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Re: CMS 1385-P: 2008 Medicare Fee Schedule
Coding – Multiple Procedure Reduction Rule for Mohs Surgery

Dear Acting Administrator Kuhn:

As President of the American Society for Mohs Surgery, a medical specialty organization representing over 850 Mohs Surgeons, I would like to thank you for the opportunity to comment on the proposed change in the exempt status of Mohs surgery codes 17311 and 17313 from the Multiple Procedure Reduction Rule (MPRR). We are concerned that the proposed rule would represent a significant reversal of CMS's own longstanding exemption of the Mohs codes from the MPRR. This change would result in increased medical costs, increased recurrences of skin cancer, and increased complications following surgery.

Legal and procedural issues regarding Mohs Surgery and the proposed change in the MPRR have been addressed in a joint letter from the American Academy of Dermatology, American Society for Dermatologic Surgery, American College of Mohs Surgery, and the American Society for Mohs Surgery. I understand that a face to face meeting with representatives from these societies is scheduled. The purpose of this communication is to discuss the impact that the proposed rule would have on the treatment of skin cancer, and the resulting increased costs, patient inconvenience, and reversal of prior gains in cure rates and quality measures that would occur.

Exemption of Mohs from the MPRR since 1991 has resulted in an evolution of skin cancer care that has had positive impact on patient outcomes and cost effectiveness. The past 16 years have seen higher cure rates, fewer complications, better functional outcomes, and movement of services out of the O.R. to the physician's office or other outpatient setting, resulting in significant cost savings. Instead of having a skin cancer widely excised in the O.R. under general anesthesia and a skin graft placed, resulting in disfigurement, loss of function and an increased risk of complications, patients are treated by dermatologists who have acquired skills in accurate, margin- controlled excision (MOHS), with a cure rate of 96% to 99%, followed, usually on the same day, with a flap, linear repair, or graft. Dermatologists have enthusiastically acquired great expertise in both Mohs Surgery and the flaps required to achieve the best possible outcome to the surgical cure of skin cancer. This has been enabled by the MPRR exemption for Mohs that has allowed full payment for Mohs and repair of the first lesion on the same day.

The reversal of this rule may encourage separation of the services of extirpation and repair, moving reconstruction back into the hands of other surgical specialists who are accustomed to using general anesthesia and the O.R. to perform their cases. This would result, not in the cost savings anticipated, but

would have the opposite effect, a significant increase in costs. It would also cause inconvenience to our patients, loss of time from work, increased postoperative complications from delay in repair of the Mohs-created surgical defect, and increased risks of general anesthesia and hospital acquired infections.

CMS has suggested that there are efficiencies in performing Mohs surgery on two lesions on the same day. This issue was addressed in 1991, at which time CMS concluded that Mohs surgeries are clearly separate procedures in a series of procedures. In 2006 Mohs codes were changed to 17311 and 17313 to reflect Mohs Surgery performed at different anatomic sites. The technical requirements of the procedure, however, remained the same as the 17304 procedure. Since a large part of the Mohs procedure itself involves pathology services, viz. mapping, creating frozen sections, and interpreting them, and as these pathology services must be performed separately for each separate Mohs case (each separate lesion) , treatment of two lesions on the same patient on the same day results in procedures that are largely separate. Pre- and post- service work is a minimal component of the Mohs procedure. Therefore, the second Mohs procedure performed on the same day should be exempt from the MPRR.

The July 2004 CPT Assistant article also reviewed the rationale behind the MPRR exemption: "The rationale for this policy is that for many surgical procedures some of the work of a procedure is not repeated when two or more procedures are performed. For these procedures the intraservice work is only 50% of the total work, while the other 50% represents pre- and post-service work that overlaps when multiple procedures are performed on the same patient on the same date of service. **For Mohs surgery, however**, greater than 80% of the work is intraservice work that does not overlap when two or more procedures are performed. The pathology portion of Mohs surgery constitutes a large portion of this total and also is not reduced with multiple procedures. The pre-service and post-service work values are small because there is a zero-day global period. Together there is very little overlap or reduction in work when two or more tumors are treated on the same patient on the same day. Therefore, Mohs surgery codes are exempt from the use of modifier 51."

Mohs and the first repair also are distinct and separate procedures. The surgeon achieves very few efficiencies by doing these on the same day. The Mohs procedure must be completed in its entirety before the repair is begun. This requires the surgeon to wait while the frozen tissue sections are being prepared before he can read the sections, determine if the tumor has been cleared, and then begin the repair. Repair requires re-rooming of the patient, repositioning of the patient, re-prepping, re-draping, re-anesthetizing and, in most cases, opening a new pack of sterilized surgical instruments for the repair.

Mohs surgery has been proven to be a cost-effective treatment for skin cancer. The payment policies that have been in place for the past 16 years have resulted in an evolution of excellence in the treatment of skin cancer. Rising costs reflect an epidemic of skin cancer in an aging population; the cost of care does not reflect lack of value. As the epidemic of skin cancer expands, we hope CMS will maintain economic policies that promote excellent, convenient, and cost efficient care which will benefit our patients and our nation as a whole.

In closing, I wish to thank you again for the opportunity to comment on an issue that is critically important to our members and the over 1 million patients with skin cancer whom we serve. Should you require additional information, please do not hesitate to contact Novella Rodgers at execdirasms@aim.com. I appreciate your attention to this important matter.

`Sincerely,

Sharon F. Tiefenbrunn, M.D.

Mohs micrographic surgery: A cost analysis★★★★

Joel Cook, MDa, John A. Zitelli, MDb

Accepted 20 July 1998

Abstract

Background: The incidence of skin cancer is increasing significantly, and many people have declared the increase an epidemic. It was estimated that 900,000 to 1.2 million cases of nonmelanoma skin cancer occurred in the United States in 1994. With increasing pressure to deliver cost-effective medical care, physicians must understand the cost and value of the various methods to treat skin cancer. ***Objective:*** Our purpose was to define the true cost of treating a series of skin cancers with the Mohs micrographic technique and compare our costs with calculated estimates of the costs to treat the same cancers with traditional methods of surgical excision. ***Methods:*** A group of 400 consecutive tumors was selected. The cost of treatment in the reference group included diagnosis, Mohs micrographic surgery, reconstruction (if applicable), follow-up, and the cost to treat disease recurrence. These costs were then compared with traditional methods of surgical excision: excision with permanent section margin control, excision with frozen section margin control, and excision with frozen section margin control in an ambulatory surgical facility. For cost comparisons, it was assumed that all tumors in the comparison groups would be excised with standard surgical margins and the resultant surgical defects would be reconstructed with the simplest method possible. The costs of diagnosis, excision, pathology, reconstruction, and the cost to treat disease recurrence were then calculated and compared with the costs of treating the lesions with Mohs micrographic surgery. ***Results:*** Our calculation of costs documents that Mohs micrographic surgery is similar in cost to office-based traditional surgical excision and less expensive than ambulatory surgical facility–based surgical excision. The average cost of Mohs micrographic surgery was $1243 versus $1167 for excision with permanent section margin control, $1400 for excision in the office with frozen section margin control, and $1973 for excision with frozen section margin control in an ambulatory surgical facility. Analysis based on anatomic location yielded similar results. ***Conclusion:*** Mohs micrographic surgery is a method of surgical excision with high intrinsic value that is cost-effective in comparison to traditional surgical excision. (J Am Acad Dermatol 1998;39:698-703.)

Background

Background

August 20, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,

John Masserant, CRNA, MS

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

2

CMS-1385-P-11890-Attach-1.DOC

#11890

29 August, 2007

Dear Sir or Madam:

My name is Doug MacKay; I am a Certified Athletic Trainer, Emergency Medical Technician, and Special Needs Instructor for the Evans County (Claxton, GA) school system. I also have 14 years' previous experience in the Industrial Health setting.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Douglas J. MacKay, M.Ed., ATC/L, EMT-I

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

I am Tim Speicher, the Director of the Human Movement and Sports Science Program at Sacred Heart University in Fairfield, CT. My comments and opinions are NOT representative of the University or its officials, but are solely mine alone. However, based on my role in ensuring the best opportunities for our students and those patients they will provide care to in the future; I am deeply concerned that the proposed regulations will unduly burden allied health care professional preparation programs which are already stretched to meet the market demand for health care professionals and also unfairly limit access to quaility medical care that Certified Athletic Trainers provide.

I am a Certified Athletic Trainer (ATC) and I am also licensed as an allied health care professional in the State of Connecticut. I hold an MS and CSCS certification and I am currently a PhD student at the Univ. of Connecticut.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients as well as the patients of my future athletic training students.

Athletic trainers are recognized by the American Medical Association as qualified to perform physical medicine and rehabilitation services, which is not the same as physical therapy. The nationally accredited education, clinical experience, and the national Board of Certification certification exam of the ATC ensure that patients receive quality health care. State law and hospital medical professionals have deemed the ATC qualified to perform physical medicine and rehabilitation services and these proposed regulations attempt to circumvent these accepted practices and standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. Further restricting access to quality health care provided by ATCs, particularly in rural America will have detrimental effects on the health care delivery system. The current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

I have not seen evidence that CMS has come to these proposed changes with clinical or financial justification, therefore, I strongly encourage CMS to consider the recommendations of those professionals that are tasked with overseeing and providing the day-to-day health care needs of their patients. I respectfully request that CMS withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Tim Speicher, ATC, LAT, CSCS

Dr. Les Dutko, Ed.D, LAT, ATC

Dear Sir or Madam:

My name is Dr. Les Dutko and I m currently a Corporate/Occupational Athletic Trainer in which my athletes are workers in the workplace, in which I prevent, evaluate, treat, and rehabilitate work related injuries; saving the workers, pain, suffering, and anxiety while the corporations savings are endless. In addition, I m currently a National Faculty Distance Learning Professor for the United States Sports Academy who resides in Martinsburg, West Virginia with my wife and 3 children.
My career involves working as a Nationally Certified (ATC) and Licensed Athletic Trainer (LAT) in the traditional setting as a high school ATC/LAT and in the non-traditional setting as a co-founder of a free standing sports medicine clinic situated on the campus of our local hospital. In these capacities I have worked with athletes of all sports and the physically active of all ages and skill levels in preventing, evaluating, treating, and rehabilitating injuries of all types and severity. In addition, I have been published in Sports Medicine, Fitness and Exercise, and Wrestling USA, and have taught Health/Physical Education for 25 years in the public school system at the high school level and have coached and played several sports, including Football, Wrestling, Track and Field, Soccer, and Baseball.

I have earned degrees from Virginia Polytechnic Institute, West Virginia University, and The United States Sports Academy and hold my ATC from the National Athletic Trainers Association Board of Certification and my LAT from the Board of Medicine of Virginia.

My career goals are to continue to travel internationally and teach sports medicine as I recently taught "Seminar in Sports Medicine" to a group of coaches/athletes in Bangkok, Thailand via The United States Sports Academy and Thailand Sports Authority. In addition, I'm interested in teaching sports medicine at a University/Sports University, while performing duties as a Corporate/Occupational Athletic Trainer and to perform Athletic Training services in a clinic setting.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

August 29, 2007

Dear Sir or Madam:

My name is Michael Maciejewski and I am a Certified Athletic Trainer (ATC) with over 10 years of allied health clinical experience. I have earned two advanced degrees; the first being a Bachelors of Science in Sports Medicine from Central Michigan University, and the second is a Masters of Science in Exercise Science from Northern Michigan University. At this time I am taking course work towards a second Masters degree.

I am currently employed by Marquette General Hospital (MGH) in Marquette, Michigan. MGH is the only Level II trauma center in the Upper Peninsula of Michigan. I work in the outpatient physical therapy department providing physical rehabilitation services to a variety of patients with musculoskeletal dysfunctions and injuries. Along with direct patient care, I also provide Athletic Training/Sports Rehabilitation services to a local junior "A" hockey team. MGH also provides this Athletic Training service to a variety of other youth athletic venues in the greater Marquette area. I have worked with individuals who suffer from every day overuse musculoskeletal injuries, workman's compensation injuries, joint replacements, motor vehicle injuries, as well as, athletic injuries (at ALL levels: youth, to professionals, to week end warriors).

My profession allows me to work with a variety of other allied health care providers such as: physicians, physician assistants, physical therapists, occupational therapists, exercise physiologists, research scientists, and nurses. I take my role as an allied health care practitioner very seriously and with great pride and dedication to the patients and individuals I serve. However, now I have great concern that my ability to provide this care that improves the livelihood of many individuals, may be in jeopardy.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

MGH also provides this Athletic Training service to a variety of other youth athletic venues in the greater Marquette area. I have worked with individuals who suffer from every day overuse musculoskeletal injuries, workman's compensation injuries, joint replacements, motor vehicle injuries, as well as, athletic injuries (at ALL levels: youth, to professionals, to week end warriors).

My profession allows me to work with a variety of other allied health care providers such as: physicians, physician assistants, physical therapists, occupational therapists, exercise physiologists, research scientists, and nurses. I take my role as an allied health care practitioner very seriously and with great pride and dedication to the patients and individuals I serve. However, now I have great concern that my ability to provide this care that improves the livelihood of many individuals, may be in jeopardy.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Michael J. Maciejewski, MS, ATC

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

RE: CMS-1385-P (Background, Impact)
Anesthesia Services

Dear CMS,

As a practicing Certified Registered Nurse Anesthetist (CRNA) and member of the American Association of Nurse Anesthetists (AANA). I strongly support the Centers for Medicare and Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under this proposed rule, Medicare would increase the anesthesia conversion factor by 15% in 2008 compared with current levels. If adopted, CMS's proposal would help to ensure that CRNAs' as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

- First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
- Second, the proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers' services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
- Third, CMS' proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS's proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America's 36,000 CRNA's provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency's acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boots Medicare payment.

Sincerely

Jerry J. Micho CRNA, MS, MSN

Re: "TECHNICAL CORRECTIONS"

The proposed rule dated July 12th contained an item under the technical corrections section calling for the current regulation that permits a beneficiary to be reimbursed by Medicare for an X-ray taken by a non-treating provider and used by a Doctor of Chiropractic to determine a subluxation, be eliminated. I am writing in strong opposition to this proposal.

While subluxation does not need to be detected by an X-ray, in some cases the patient clinically will require an X-ray to identify a subluxation or to rule out any "red flags," or to also determine diagnosis and treatment options. X-rays may also be required to help determine the need for further diagnostic testing, i.e. MRI or for a referral to the appropriate specialist.

By limiting a Doctor of Chiropractic from referring for an X-ray study, the costs for patient care will go up significantly due to the necessity of a referral to another provider (orthopedist or rheumatologist, etc.) for duplicative evaluation prior to referral to the radiologist. With fixed incomes and limited resources, seniors may choose to forgo X-rays and thus, needed treatment. If treatment is delayed, illnesses that could be life threatening may not be discovered. Simply put, it is the patient that will suffer as result of this proposal.

I strongly urge you to table this proposal. These X-rays, if needed, are integral to the overall treatment plan of Medicare patients and, again, it is ultimately the patient that will suffer should this proposal become standing regulation.

Sincerely,

Ray Fowler, DC, FACO, DACRB

Background

Background

August 29, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES

Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

? First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
? Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
? Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,

Jana W Hough, CRNA

Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Background

Background

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

_ First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.

_ Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.

_ Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

As a working CRNA it is becoming a very unattractive area for future students to take as a career path due to constant cuts and decreasing reimbursement. When you spend four hours putting all of your knowledge and compassion into saving someones loved one only to struggle with the paper work to collect a very small fee you feel betrayed. When a guy comes to my house to work on my air conditioner for three hours and I MUST PAY $95 and hour (no discount) it is very disheartening. Please vote for a fair anesthesia fee schedule. Anesthesia is what allows surgeons to perform all the wonderful procedures they do. With good anesthesia most of todays fancy and life saving operations would only be a dream.

Sincerely yours,
Michael Gund CRNA

Subject: CMS-1385-P: Medicare Program; Proposed Revisions to Payment Policies Under the Physician Fee Schedule, and Other Part B Payment Policies for CY 2008; Proposed Elimination of the E-Prescribing Exemption for Computer-Generated Facsimile Transmissions

Deleted: S

Formatted: Indent: Left: 0"

To Whom it May Concern:

Deleted: Dear Sir/Madam

The Rite Aid Corporation is writing to provide our comments on several provisions of the proposed 2008 CMS Physician Fee Schedule regulation. Rite Aid is one of the nation's largest drug store chains, operating approximately 5,100 pharmacies in 31 states and the District of Columbia. We appreciate the opportunity to comment on proposed rules affecting reimbursement of Part B drugs and the potential elimination of the NCPDP SCRIPT standard exemption for computer-generated facsimile transmissions.

Proposed Regulation Does Not Increase Part B Drug Supplying or Dispensing Fees

Medicare payment policies should be designed to ensure that beneficiaries have access to Part B covered drugs. Every year, millions of Medicare beneficiaries choose to receive their Part B drugs from their community retail pharmacies. Despite the reliance beneficiaries have on community retail pharmacies, many aspects of current Part B reimbursement policies create economic and administrative challenges for pharmacies to serve Medicare beneficiaries.

In this regard, the Rite Aid Corporation is concerned that the proposed rule does not increase supply or dispensing fees for Part B drugs in 2008. These fees have not been increased in two years, and increases are needed in 2008 just so these payments keep pace with increases in basic pharmacy operating costs as well as medical inflation.

These increases are also needed to help offset potentially insufficient reimbursement for drug products dispensed under the Part B drug ASP-based methodology, as well as to compensate pharmacies for the additional administrative costs incurred in submitting Medicare Part B claims.

Since 2006, the Part B drug supplying fees have remained at $24 for the first Part B oral drug prescription dispensed for a 30-day supply and $16 for each additional such prescription supply. Medicare pays a one-time $50 fee for the first Medicare Part B immunosuppressive prescription after a transplant. For inhalation drugs, the fees are $57 for an initial 30-day supply and $33 for a subsequent 30-day supply and $66 for a subsequent 90-day supply.

At the same time that these fees have remained stagnant, pharmacists' and pharmacy staffs' salaries continue to increase. According to the Bureau of Labor Statistics, the average (mean) pharmacist salary increased from $88,650 ($42.62 per hour) to $93,500 ($44.95 per hour) from May 2005 to May 2006. That is a 5.5 percent increase. For pharmacy technicians, the increase was $25,350 ($12.19 per hour) to $26,510 ($12.75 per hour). That would be a 4.6 percent increase. Those changes do not account for changes in benefit costs or professional insurance that are traditionally provided to pharmacists by pharmacy employers. These amounts also do not account for pharmacist salary increases through the present time.

CMS will also receive comments that a recent study by the Lewin Group sponsored by the Transplant Pharmacy Coalition finds that the average cost of dispensing a Part B oral immunosuppressant prescription is $30, well above the current payment rates. Moreover, this amount is the average pharmacy cost for supplying each Part B prescription. That means that CMS should eliminate the tiered reimbursement rate (i.e., one rate for the first prescription in a month and a lower rate for subsequent prescriptions in a month), and establish a higher rate for all Part B prescriptions, as well as increase the rate for the initial transplant prescription. In addition, the final regulation should include a provision for these fees to increase automatically each year to keep pace with pharmacy costs of supplying these prescriptions.

Deleted: Plus

Deleted: , arguing that

Deleted: another

We also believe that the fees should be increased because an ASP-based system may not reimburse pharmacies adequately for Part B drug products, and pharmacies incur higher costs to process Part B drug claims over and above the costs to process other third-party administered claims. These costs are described below:

ASP-based system may not compensate adequately for dispensed drug products: Pharmacies may be negatively impacted by the ASP-based Part B drug reimbursement system, which bases reimbursement for a drug on the HCPCS code and not the drug's NDC number. In certain cases, HCPCS codes reimburse every product, whether brand or generic, listed under a particular code at the same reimbursement amount.

Formatted: Font: Bold

This has especially become a problem with Xoponex solution, which is known as levalbutetol, a brand name version of albuterol. A recent coverage determination made by CMS and DME MACs reimburses pharmacies for Xoponex at a blended ASP based on the prices for both Xopenex and albuterol. This results in a reimbursement for Xoponex which is below pharmacies costs of purchasing Xoponex, given that albuterol has much lower costs and has a higher overall percentage of albuterol sales.

We urge that the payment policies for Xoponex be revised such that pharmacies are reimbursed appropriately for their costs of dispensing Xoponex when prescribed, and when the physician will not change the prescription to generic albuterol inhalation solution.

No On-Line Claims Adjudication: Unlike almost every other third party prescription plan, pharmacies cannot adjudicate Part B claims in an online, real time manner. As a result, eligibility determination and claims processing in Medicare Part B are exceptionally burdensome. For example, pharmacies do not know at the point of service whether a Medicare beneficiary has already met their Part B deductible for the year.

Formatted: Font: Bold

We also don't know whether the individual has had a Medicare covered transplant for which Medicare will pay for the Part B drug. Coordination of benefits is also an issue as many individuals have additional private or public sector prescription drug coverage that wraps around Part B. Unlike in other third party benefit programs, pharmacies often are not presented with sufficient information by the beneficiary at the point of sale to successfully achieve COB. This additional paperwork results in higher costs for the pharmacy to fill and bill a Medicare prescription.

Deleted: All t

Deleted: additional

Even after "clean claims" are submitted to the DMERC, Medicare Part B has a higher rejection rate than traditional third party prescription plans because of the lack of an online claims adjudication system. As a result, pharmacies incur significant amounts of "bad debt" in Medicare Part B as compared to other third parties.

Delays in payment: Medicare Part B takes more time to pay pharmacies than traditional third party payers, tying up the pharmacies' cash flow for extended periods of time. This is especially a problem in the case of expensive immunosuppressive drugs. Because of the higher number of claim rejections in Medicare Part B and the longer time it takes to pay Medicare claims on average, a pharmacy may have dispensed several expensive Part B drugs to a Medicare beneficiary before the pharmacy gets any assurance that it will be reimbursed for the initial Part B claim submitted.

Formatted: Font: Bold

Deleted: true

Rite Aid urges CMS to consider the unique challenges community retail pharmacies face in filling Part B prescriptions. Medicare beneficiaries' access to their local pharmacy must be protected by implementing policies that maximize economic and administrative efficiencies in serving Part B patients. For that reason, we urge an increase in both the Part B supplying and dispensing fees for 2008.

Modify Proposed Elimination of NCPDP SCRIPT Standard Exemption for Computer-Generated Faxes

We support the proposed rule's elimination of the NCPDP SCRIPT standard exemption for computer-generated prescription faxes, with modifications. We have included some suggestions on how to make the proposal more workable for physicians and pharmacists, and better for patient care.

Deleted: However, we

Narrow Elimination of Exemption: Rite Aid asks that CMS continue to take a step-wise approach to implementation of e-prescribing regulatory requirements. Rather than remove the exemption for all electronically generated faxed prescriptions, as the proposed regulation would do, we ask that CMS narrow the exemption to eliminate the exemption for prescribers that have software or an application that has the ability to generate NCPDP SCRIPT transactions. These prescribers and dispensers can convert to true electronic prescribing quickly without changing their workflow and without significant expense. That is because any required upgrade should be included in the costs that the prescriber has already paid.

The costs for other prescribers could be significant, however, if CMS were to completely eliminate the fax exemption. Some prescribers and dispensers do not currently have the functionality to engage in true e-prescribing. To force them to adopt this functionality would be disruptive to their workflow and may require them to expend significant time and money toward such adoption. We believe that most of them would revert to paper and oral communications for prescriptions, potentially reducing some of the gains made toward the adoption of true e-prescribing. This could also impair patient care as a computer generated faxed or e-prescription is generally always easier to read than a hand written prescription. Moreover, a computer-generated faxed prescription or e-Rx also reduces the potential for transcription errors when a pharmacist takes an oral prescription over the phone. Patient safety is generally enhanced with computer-generated faxed prescriptions or e-Rxs.

For prescribers and dispensers who move to adopt true e-prescribing after the effective date of the proposed rule, we ask that CMS allow a transition period of one year after they adopt the necessary technology, application, system, or software. This would allow for workflow changes, training, and the resolution of any technical glitches that might occur.

Proposed Rule Could Increase Diversion of Controlled Substances: Current DEA regulations prohibit the e-prescribing of a prescription for a controlled substance. This prohibition acts as a tremendous barrier to prescriber adoption of e-prescribing. As currently written, CMS' proposed rule would exacerbate the problems caused by this prohibition.

If prescribers could use neither electronic prescribing (because of DEA regulations) nor computer-generated prescription faxes (because of the CMS proposed rule) for controlled substance prescriptions, then many prescribers would have to revert to using traditional fax machines or paper and oral prescriptions for controlled substances. This could increase diversion in the prescribing of controlled substances because e-Rxs and computer generated faxed prescriptions are harder to forge and less subject to diversion than paper or oral prescriptions.

For these reasons, until such time that DEA amends its regulations to allow for the electronic prescribing of controlled substances, we believe that prescribers and dispensers need to retain the ability to use computer-generated faxes to send and receive prescriptions for controlled substances.

Formatted: Font: Bold

Deleted: and dispensers

Deleted: or dispenser

Deleted: and dispenser

Deleted: s could,

Deleted: however,

Deleted: completely

Formatted: Font: Bold

Pharmacies Cannot Enforce Requirements: CMS cannot hold pharmacies responsible for enforcing the requirements of the rule on prescribers. For example, there is no way for a pharmacy to know whether the fax received by the pharmacy was generated by a physician's computer system that complies with the NCPDP SCRIPT standard versus a computer that does not. Nationwide, physicians transmit hundreds of thousands communications every day to pharmacies. This number continues to grow as prescription volumes increase.

Formatted: Font: Bold

To require pharmacies to know if a prescriber has sent a communication in a SCRIPT-compliant manner could reverse many of the gains made in the adoption of electronic connectivity. Accordingly, CMS cannot allow for the recoupment of prescription claims after pharmacies filled them in good faith only to find out, after the fact, that the prescription violated the CMS regulation. Community pharmacies should not be penalized for prescriber non-compliance.

Concerns about Liability on Pharmacies: Prescriptions transmitted before the compliance deadline but filled or refilled after the compliance deadline should not be subject to the rule. We ask that CMS clarify this point. Otherwise, pharmacies would be forced to obtain new prescriptions for patients after the rule's effective date. Finally, we ask that CMS advise states that the dispensing of a prescription transmitted in a noncompliant manner should not be considered a violation of either federal or state false claims acts.

Formatted: Font: Bold

The proposed rule is designed to foster the adoption of true e-prescribing, not to increase the potential legal liability of pharmacies. However, we are concerned that additional litigation against pharmacies could be encouraged by allowing the dispensing of a prescription transmitted in a noncompliant manner to be deemed fraud and abuse. This could increase Medicare program participation costs for pharmacies and could potentially discourage pharmacy participation in the program.

We thank you for the opportunity to submit comments on proposed rules affecting Medicare Part B oral and inhalation drug reimbursement and the potential elimination of the NCPDP Script standard exemption for computer generated prescription faxes. We support CMS' proposal to foster further adoption of true e-prescribing, and we urge CMS to move forward with the proposed rule, incorporating the recommendations we have provided above. For further information, I can be reached at 703-888-0859 or jcoster@riteaid.com. Thank you.

Sincerely,

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Samuel L. Goodloe,M.D.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

I have been working as a physical therapist for 10 years in the outpatient orthopedic setting. In the last few years the number of physician owned physical therapy clinics have increased significantly in my region. Recently it has come to my attention that many of these physicians order physical therapy for their patients but tell them they have to be treated at their facility. It is a patients right to choose but many times the patient feels intimidated and "follows doctor's orders".

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of training our future anesthesiologist. General practice anesthesiologists are being forced away from areas with disproportionately high Medicare populations, and this is placing undue burden on academic centers who have a difficult time attracting top anesthesia trainers when they can make so much more in private practice.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. Particularly as it relates to medicare patients, I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Organization : American Association of Nurse Anesthetists

Category : Other Health Care Provider

Issue Areas/Comments

Background

Background

As a member of the American Association of Nurse Anesthetists (AANA), I support the CMS proposal to boost the value of anesthesia work by 32%. Under this proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) The adoption of this CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important. First, as AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the MedPAC and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of market rates, but reimburses for anesthesia services at approximately 40% of private market rates. Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers' services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule. Third, CMS' proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS' proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America's 36,000 CRNAs provide some 27 million anesthetics annually in the US, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healtheare delivery in the US depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency's acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,

Laura A Cohen, CRNA, BS,

Organization : **SportsWorks**

Category : **Hospital**

Issue Areas/Comments

GENERAL

GENERAL

Dear Sir or Madam:

My name is Ty Butler. I have a Masters in Public Administration with an emphasis in Healthcare Administration and hold a license as an Athletic Trainer in the state of Tennessee. I am employed in a rural hospital in Western Tennessee.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.
While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.
As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.
The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.
Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.
Sincerely,
Ty Butler, MPA, ATC/L

Therapy Standards and Requirements

Therapy Standards and Requirements

Dear Sir or Madam:

I am a Licensed Athletic Trainer practicing in Wisconsin. My current role serves as the hospital/industrial outreach industrial rehabilitation coordinator.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam insure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their abilities to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day to day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Daniel Trampf LAT, CSCS
Industrial Rehabilitation Coordinator

Issue Areas/Comments

GENERAL

GENERAL

Dear to Whom It May Concern,

I am Kurt Wile, a senior Athletic Training student at a small college in southeast Ohio named Marietta College. As I am a senior student in an Athletic Training Program I will be taking the NATA Board of Certification Exam in the spring to become a Certified Athletic Trainer. I will soon be looking for employment in the field of Health Care as I will be a Health Care Professional. Employment, whether it be in a Athletic Training position or in the clinical atmosphere working with Physical Therapists and other such Health Care Professionals, will be my greatest concern come the summer of 2008. Due to my future in this field, I am writing today to voiee my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P. While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As a future Athletic Trainer, I will be qualified to perform physical medicine and rehabilitation services, which is not the same as physical therapy or occupational therapy. My education, clinical experience, and future certification will ensure that I will be qualified to treat any patient with quality health care. The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Of more concern to myself and my fellow classmates at Marietta College and other colleges across the United States of America is the potential to be denied from the workplace in the future due to these changes by the CMS. I feel that this change will hurt my future after working hard in a very expensive private school for four years. A tuition of approximately $33,000 per year over four year adds up to a large sum of money I will eventually have to pay back this money and if there are not jobs out there to make money and to help payback my loans.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely, Kurt Wile ATS

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Comments to CMS

Please accept these comments, respectfully submitted, on

the July 12 physician fee schedule rule, specifically the issue surrounding physician self-referral and the in-office ancillary services exception.

From: Steve Allen, M.S.,P.T.

I am a physical therapist and co-own a business with my wife who is also a physical therapist. She has been in practice for over twenty five years and I have been in practice since 1991. In addition, I have seventeen years of teaching in medical school and physical therapy school. Our practice is primarily very small offices in small, somewhat rural, towns.

Although we are encountering physician owned physical therapy services (POPTS) only in our larger cities of Valdosta and Tallahassee (other towns are suspected of have a more disguised arrangements), the POPTS affect the level of services in all our communities.

1. We are frequently told by our former patients in our Quincy, Florida office, that Tallahassee physician (I will be happy to identify if appropriate) tells patients they need to come to his office for physical therapy because he has equipment that other clinics do not have. This is not true and is only a ploy to increase his revenue while patients suffer by having to drive from small out-lying towns into Tallahassee traffic costing the patients time and money.

2. In Marianna, Florida, Dr. (I will be happy to identify if appropriate) uses a similar plan and convinces patients that they need to drive from other towns for therapy which financially benefits Dr. Gilmore. According to the local newspaper in Jackson County, Florida, Dr. Gilmore has already been under investigation by government agencies and has lost his privileges at that Jackson County hospital and now does all his surgeries in Panama City, Florida.

3. Dr. (I will be happy to identify if appropriate) in Thomasville, Georgia operates a clinic and refers patients to his own business but does not even have a licensed physical therapist on staff.

4. We deal with orthopedic surgeons form all over South Georgia and north Florida. Most of those who are not in a referral for profit situation, write specific orders such a 2X/week for 3 weeks or 3X/week for 6 weeks, for example. They expect results in that time or less, or they expect to have a good case presented as to why more visits are needed. It is my understanding that information already gathered by CMS indicates increased utilization by physicians referring with a financial incentive.

5. Patients should have the right to choose their most convenient and highest quality care option. Allowing patients to be bullied and influenced by greedy physicians for financial is not in the best interest of the American public nor the interest of CMS.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:
I have been a certified athletic trainer since 2005. Before obtaining my national certification I received my four year Bachelor of Science degree in Athletic Training and passed the national certification exam for athletic training. I am also currently a semester away from receiving my Master of Science degree in Exercise Science. Through my education I have received extensive training, both in the classroom and through clinical experience, in injury prevention, recognition, treatment, and rehabilitation. I am currently working as an athletic trainer and physician extender in an orthopaedic clinic where I work closely with physicians and physical therapists and see an extensive population of patients with a wide array of injuries and conditions.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.
While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.
As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

see attachment

CMS-1385-P-11931-Attach-1.DOC

#11931

RE: Physician self-referral rules

Dear Sir,

I am an urologist practicing in Florence, Alabama. I am concerned about some proposed changes in self-referral laws proposed by CMS. I understand the reasons for trying to minimize conflicts of interest regarding self-referral for financial gain, however I think the proposed rules are unlikely to reduce utilization and thus the cost of delivering urologic care.

As an urologist, I see the benefits of joint ventures making useful technology such a lithotripsy, available to Medicare and Medicaid patients. I believe that having physicians make this technology available promotes the proper availability of new medical technology and does not promote over utilization or increase the cost of health care.

I will discuss the anti-physician ownership proposals in the 2008 proposed Physician Fee Schedule which I believe will be detrimental to Medicare and Medicaid patients and physicians without the assumed benefit of reducing the cost of delivering health care.

Burden of proof

I understand this provision to force the physician to bear the burden of proving that a referral did not violate any existing anti-self referral laws, Stark laws. This seems nearly impossible for a physician's office to accomplish even if they the unlimited time and resources to dedicate to arguing with the government. As you are aware, doctors and their office staff have very limited time to argue about denial of payment, especially something that can be as ambiguous as self referral for supposed unnecessary evaluation or treatment. When there are concerns that laws that CMS has proposed are being broken, CMS should bear the burden of proving self referral arrangements are illegal, not the physician.

Per Click Payments

The proposal to eliminate time based or unit-of-service payment for space and equipment leases appears to go against what Congress has already deemed to be a proper and fair method of payment. Per click payments are necessary to make it worth the risk for joint ventures to risk providing expensive technology to rural areas. The hospitals in rural areas many times cannot afford to risk investing in expensive technology when lower than expected usage might result in a loss to the hospital. Allowing joint ventures to spread the risk by providing technology to multiple regional hospitals seems to me the best option to provide treatments such as lithotripsy to the most patients at least cost.

Stand in the Shoes

As I understand the implications of this proposal, if a physician referred a patient to a hospital owned Ambulatory Surgery Center (ASC), then this would be considered a violation if the service provided at the ASC was part of physician owned joint venture. This would force physicians to treat their patients in a different ASC to allow them to treat their patients, very likely causing more ASCs to be built. I believe that in the end this would cause increased costs for Medicare.

Services Furnished Under Arrangements

The proposed changes to the Stark rules regarding services furnished under arrangements are to prevent physician owned joint ventures from performing diagnostic Designated Health Services (DHS). Unfortunately it appears that the new rules will also prohibit therapeutic services also. In urology this would include laser prostate procedures for voiding problems and cryotherapy for localized cancers. Even though I currently do not perform either of these treatments I believe that they are becoming better and better and eventually may become the best way to treat certain conditions. Hospitals can be reluctant to purchase expensive alternative treatment technology when they already are getting paid to treat the condition the old way. By allowing physicians, through joint venture arrangements, to take the risk of purchasing expensive new technology and offering the new treatments to patients at the hospital, I believe this is one of the best ways to offer Medicare and Medicaid patients access to new technology. These arrangements allow the new technology to rotate to numerous regional hospitals. Each hospital does not need to buy technology that they cannot afford due to inadequate volume to cover the costs. I am not aware that data suggests that therapeutic technologies such as lithotripsy owned by physician joint ventures are being over utilized. I share CMS's concern that physician owned diagnostic equipment is being over utilized by some physicians, thus driving up cost without apparent benefit. I believe that the vast majority of physicians are unwilling to perform potentially risky therapeutic procedures when there is not clear cut indications and potential for a lawsuit. With diagnostic procedures there is essentially no risk and ordering an unnecessary test can easily be justified as practicing defensive medicine to prevent being sued.

Lumping diagnostic testing and therapeutic procedures into a rule that is really trying to reign in ordering unnecessary diagnostic tests will limit patient access to proven beneficial therapeutic technology. I ask CMS to separate therapeutic joint ventures from diagnostic imaging which I would agree is being abused. I do not believe there is sufficient evidence to show that therapeutic technology is being abused and needs to be curtailed. Physicians, who know what is best for their patients, should be allowed to offer the best technology to their patients. Placing restrictions on this arrangement I believe would only increase costs in the long run.

Sincerely,

GENERAL

GENERAL

I am a urologist in a group practice, and our patients have come to depend a great deal on the convenience and personlaized care offered through our offices. We offer a wide range of services, and it is very worrisome that our Medicare beneficiaries might have to resort to highly expensive and burdensome hassles for treatment of conditions such as prostate cancer. Our treatment centers continually receive high patient-satisfaction marks, and we worry that the proposed changes could impact this.

Background

Background

Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018
Baltimore, MD 21244 8018
August 20, 2007
RE: CMS 1385 P (BACKGROUND, IMPACT)
ANESTHESIA SERVICES
Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

? First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.

? Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.

? Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,

Dana Marshall, CRNA

Therapy Standards and Requirements

Therapy Standards and Requirements

Dear Sir or Madam:

My name is Steven C. Hicks. I am Certified Athletic Trainer working for Guthrie Sports Medicine in Sayre, Pennsylvania. I am not only contracted to provide Athletic Training Services but also work in the clinical setting at Robert Packer Hospital. Before the change in law I was able to see patients in the clinical setting and was very successful in doing so. I was trained at Slippery Rock University where I received my Bachelors of Science degree and then received my Master s Degree from Ohio University both with the specialization in Athletic Training. Every day at Athens High School I treat injured student athletes, which allows them to return to sports and also saves Medicare/Medicaid/ and the Insurance companies a lot of money.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As a certified athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Steven C. Hicks, MS, ATC

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to urge the CMS to support the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. The job of an anesthesiologist is extremely important. Without qualified, competent anesthesiologists, patient care will suffer. It is imperative that the Medicare payments be increased so that the anesthesiologists can be more fairly compensated for their work of helping ensure the patient safely make it through surgery. The areas that are more densely populated with Medicare patients are increasingly finding it more difficult to provide the care of the highly trained anesthesiologist. Please pass the CMS-1385-P to help ensure the high level of care that the patients deserve.

Thank you for your cooperation in this matter.

Sincerely,

Ursula A. Bethea

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

I am the Head Athletic Trainer for the Suffolk Longhorns at Suffolk County Community College in Brentwood NY.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Nicholas Chiofalo, ATC
Head Athletic Trainer
Suffolk County Community College

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Studies have already confirmed that thousands of fraudulent charges are paid out every year to physician owned practices. In my region, there is presently a push from a large physician group to start and expand their own therapy. What is concerning is that the primary motivation for opening their own therapy is to increase their revenues, not to improve patient care. The system as it is now allows physicians to do just that. Physicians can increase the number of their referrals and enjoy financial gains. The ability for physicians to self refer provides an ideal environment for fraud and abuse. I would hope in a time when our Medicare system is struggling, controlling fraud would be a priority. I appreciate your diligence in correcting this matter

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

My name is Aimee Holley and I am a certified and licensed athletic trainer in Ohio. I graduated from an athletic training program at Grand Valley State University and have been practicing as a certified athletic trainer since February 2005. I work at an all girls high school, St. Ursula Academy, in Toledo, OH. I am responsible for the health care concerns of the athletes, which include but is not limited to prevention, evaluation, treatment, education, and rehabilitation. Many athletes will come to me asking for specific exercises to help them get back to play quicker and safer. As an athletic trainer, I am qualified to do this whether it is in a high school setting, clinic, or college. The injuries are the same and we as professionals can adapt to meet the needs of others.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

Background

Background

August 20, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,

Issue Areas/Comments

GENERAL

GENERAL

To whom it may concern,

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

James S. Day, M.D.

GENERAL

GENERAL

Dear Sir or Madam:

I am a Certified Athletic Trainer in a secondary school. I am the first person my athletes after they get hurt. I am the the one that helps calm the parents and athletes down after an incident and help them seek the appropriate medical care that they need. When injuries are bad enough I am also the one that immoblizes before advanced medical personal arrive. MD's, PT'S etc are not their when injuries occur. They see athletes after we do. Certified Athletic Trainers are the first responders in life threatening incidents. If we were not present more athletes would have fatalies in athletic competions. Also athletes could suffer more serious injuries because they were not properly taken care of immediately after the injury. Also I am available on campus so that an athlete can Rehabilitate an injury properly. Realistically athletes can only see a PT 2-3 time a week when they can't the quality time that they actually need. ATC's can meet with athletes 5-7 times a week and actually know the athlete better as they see them more often and know them personally.
I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Thank you for the opportunity to submit comments on the Physician Self-Referral Provisions of CMS-1385-P entitled Medicare Program; Proposed Revisions to Payment Policies Under the Physician Fee Schedule for Calendar Year 2008. I am a board-certified pathologist and a member of the College of American Pathologists. I practice in Crystal River, Florida, as part of a 5-member pathology group, located at a hospital and in an independent laboratory.

I applaud CMS for undertaking this important initiative to end self-referral abuses in the billing and payment for pathology services. I am aware of arrangements in my practice area that give physician groups a share of the revenues from the pathology services ordered and performed for the group s patients. I believe these arrangements arc an abuse of the Stark law prohibition against physician self-referrals and I support revisions to close the loopholes that allow physicians to profit from pathology services.

Spccifically I support the expansion of the anti-markup rule to purehased pathology interpretations and the exclusion of anatomic pathology from the in-office ancillary services exception to the Stark law. These revisions to the Medicare reassignment rule and physieian self-referral provisions are necessary to eliminate financial self-interest in clinical decision-making. I believe that physicians should not be able to profit from the provision of pathology services unless the physician is capablc of personally pcrforming or supervising the service.

Opponcnts to thcse proposcd changes assert that their captive pathology arrangements enhance patient care. I agree that the Medicare program should ensure that providcrs furnish care in the best interests of their patients, and, restrictions on physician self-referrals are an imperative program safeguard to ensure that clinical decisions are determined solely on the basis of quality. The proposed changes do not impact the availability or delivery of pathology services and are designed only to remove the financial conflict of interest that compromises the integrity of the Medicare program. The financial incentives currently being exploited at the clinical level not only is morally reprehensible, but also pose a risk for patient safety if biopsies are generated solely for financial gain.

Sincerely,

Dr. Fernando Esclopis

CMS-1385-P-11951-Attach-1.DOC

#11951

August 29, 2007

Centers for Medicare and Medicaid Services (CMS)
Centers for Medicare & Medicaid Services
7500 Security Boulevard
Baltimore, Maryland 21244-1850

Dear Sir or Madam:

My name is Dr. John M. Hauth and I currently serve as the Program Director and Chairperson of the CAATE-accredited Athletic Training Education Program at East Stroudsburg University of Pennsylvania. In addition, I am also certified by the national Board of Certification® in athletic training and credentialed to practice as an athletic trainer in Pennsylvania through the State Board of Medicine. I have worked as an athletic trainer and rehabilitation specialist in secondary schools, colleges and universities, outpatient physical therapy settings and sports medicine centers.

While my primary role today is as a teacher-scholar and researcher, I continue to practice as an athletic trainer and share my expertise in rehabilitation with colleagues and friends in medicine, physical therapy, clinical exercise physiology, physical education and other related professions. My twenty-five years in practice have further strengthened my belief that patients in need of physical medicine and rehabilitation services are best cared for when a team of qualified individuals work together to deliver evidence-based practices.

This is why I am writing you today to express my tremendous concern regarding the proposed changes in 1385-P. In recent years we have seen explosive growth in health care spending and substantial changes and shifts in health insurance. The major problem with affordable health insurance and access to affordable and competent health care is the continued increase of health care in the United States. With health care costs projected to rise over $4 trillion by 2015, it is perplexing that the Centers for Medicare and Medicaid Services would continue to make decisions that restrict qualified health care practitioners like athletic trainers, clinical exercise physiologists and others from assisting in a health care system that is clearly in crisis. It would be prudent at this time for CMS to take a step back and examine how they can appropriately engage other qualified health care providers in the fight to save our health care system.

In short, I am writing to oppose the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P. Again, this decision is another uninformed action that will continue to drive the cost of health care in America up while ignoring the education and qualifications of several health care

providers that could undoubtedly help maintain the standard of care Americans desire and deserve. Additionally, I am concerned that the proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting. As a practitioner who has cared for a diverse population, I am confident that this decision will harm patients and further weaken our fragile health care system.

Athletic trainers and other health care providers restricted by the proposed changes in 1385-P have the education and training to perform physical medicine and rehabilitation services to a variety of patients. This is not the same as physical therapy which certainly holds a very important place in the health care; but not the only place. The education, clinical experience and national certification examination for athletic trainers ensures that patients will receive competent and quality care. State laws and an array of hospital medical professionals have recognized and sanctioned our qualifications to perform these services and these proposed regulations attempt to circumvent those standards. It is hard to see how CMS believes that this will best serve the patient-consumer.

CMS is certainly aware of the statistics shared earlier in this letter and the lack of access and workforce shortage in the physical medicine and rehabilitation industry. If CMS is truly concerned with delivering the highest standard in health care to the American public, they will withdraw these proposed changes and seek ways to improve upon the flexible standard of staffing in hospitals and other rehabilitation facilities. In today's health care environment, this is the only way we can ensure patient's the ability to receive the best treatment while containing health care costs.

My research suggests that CMS has come to these proposed changes without clinical or financial justification and therefore, I respectfully request that CMS delay making any decisions regarding 1385-P or physical medicine and rehabilitation until they have fully investigated how to integrated qualified health care providers more fully into the flexible guidelines that currently exist. On behalf of my faculty and the 200 future practitioners I am preparing for the health care industry, I request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Dr. John M. Hauth, ATC

Re: TECHNICAL CORRECTIONS

The proposed rule dated July 12th contained an item under the technical corrections section calling for the current regulation that permits a beneficiary to be reimbursed by Medicare for an X-ray taken by a non-treating provider and used by a Doctor of Chiropractic to determine a subluxation, be eliminated. I am writing in strong opposition to this proposal.

While subluxation does not need to be detected by an X-ray, in some cases the patient clinically will require an X-ray to identify a subluxation or to rule out any "red flags," or to also determine diagnosis and treatment options. X-rays may also be required to help determine the need for further diagnostic testing, i.e. MRI or for a referral to the appropriate specialist.

By limiting a Doctor of Chiropractic from referring for an X-ray study, the costs for patient care will go up significantly due to the necessity of a referral to another provider (orthopedist or rheumatologist, etc.) for duplicative evaluation prior to referral to the radiologist. With fixed incomes and limited resources seniors may choose to forgo X-rays and thus needed treatment. If treatment is delayed illnesses that could be life threatening may not be discovered. Simply put, it is the patient that will suffer as result of this proposal.

I strongly urge you to table this proposal. These X-rays, if needed, are integral to the overall treatment plan of Medicare patients and, again, it is ultimately the patient that will suffer should this proposal become standing regulation.

Sincerely,

Dr. Brian K. Dahmer

Background

Background

August 29, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES

Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.

First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.

Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.

Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

CMS-1385-P-11955-Attach-1.TXT

11955

I am writing to comment on the July 12 proposed 2008 physician fee schedule and to express my concerns for the current practice of physician in-office self-referral for physical therapy services. As a young man, I knew that I would pursue a career in healthcare because of my desire to help people achieve their highest level of functioning. I initially began my studies wanting to be a physician, but following a summer job at a hospital in Camden, AR, I knew that physical therapy was the career choice for me. This occupation allows me to spend hours with my patients learning every aspect of their movement and their physical deficits and then create a treatment plan that is customized for them. I completed my PT degree at the University of Pittsburgh and later a graduate degree in PT from the University of Florida.

Over the past 15 years as a therapist, I have had the great opportunity to work in the field of orthopedics, sports, neurology, pediatrics, long term care, administration, home health, and even eight years as a faculty member in academia. I have seen many great changes in the field of physical therapy but I have also seen the tremendous abuse of the profession from physician-owned practices. In these practices, patients who may not require physical therapy services are issued an order for therapy because of the financial incentive to the physician. In my local area, I have seen therapist-owned practices close because physicians directed their referrals to their own practice.

In the clinic where I work, I have patients tell me that they would have came to my clinic earlier since it was closer to their home, but their physician told them they had to use services at the physician-owned practice. The patient stated that the therapy was performed in a small treatment room, unlike my large gym space that more closely matched the patient's needs. Many of my employees have once worked in physician-owned practices. One of which told me that the physician would tell them how many units to bill, whether or not they had actually done so. The current rule allows physicians to increase their profits by often providing Medicare patients a lesser quality of services.

I currently work with over 50 physical therapists who treat a variety of diagnoses. Ironically, it is the physical therapist who often derives the diagnosis since the referral was made for pain or simply for a "PT eval." I am proud to work in a profession that stresses a comprehensive evaluation of the patient and a Code of Ethics that helps build a reputable practice. I ask that you listen to the physical therapists who are negatively affected by the current in-office ancillary services provided by physicians. There is no logical or rational reason why a physician should provide in-office PT services except for profit. Unfortunately, this situation does not provide the best utilization of services for the Medicare patient. Please correct and close this loophole and provide Medicare beneficiaries with non-compromised physical therapy services. Thank you for considering my comments on this important issue.

Background

Background

August 20, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,
Tania Derington, CRNA

Re: CMS-1385-P
Anesthesia Coding (Part of 5 year review)

Dear Ms. Norwalk:

I am writing to thank the CMS for reviewing the payment schedule for anesthesia services. For many years it has been grossly undervalued and your proposed increase will help to bring the Medicare payment more into line with other payers.

Our current payment is only $15.96 per unit, this is about one third of the rate of most private payers. The situation in my group is probably not unlike most other anesthesia groups - about one third of our patients are covered by Medicare and they represent only about 12 percent of our income. Given that they are often the most complicated and high risk patients you can understand why many in the field consider leaving Medicare entirely.

The RUC has recommended an increase of nearly $4.00 per anesthesia unit. I am pleased the Agency accepted this recommendation and I would urge you to support full implementation of the RUC's recommendations. This will go a long way in ensuring continued access to quality anesthesia care for Medicare patients.

Thank you for considering this important issue.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

My name is Scott Kimbel and I am an ATC or Certified Athletic Trainer working at a large urban school district in central Pennsylvania. I have been practicing Athletic Training for 11 years and am also a certified Physical Education and Health teacher in the state of Pennsylvania. I received my bachelor's in Sports Medicine from Messiah College in Pennsylvania.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Scott P. Kimbel ATC
Head Athletic Trainer

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

GENERAL

GENERAL

Dear Sir or Madam:

My name is James Bond and I am a certified athletic trainer and a physical therapist assistant. I am currently employed at the Rehab Group of Morristown,a privately owned physical therapy clinic. I am also getting my doctorate as a physical therapist. Due to issues that Medicare have with trained professionals such as athletic trainers, I had to go back to school to get my associates degree to be recognized as a health professional. I find this disturbing because I am more trained with my bachelors degree in athletic training than the training and assoeiates degree I received as a physical therapist assistant (PTA). My job setting consists of seeing orthopedic patients with many types of problems which the physical therapist in my clinic would rather me treat the orthopedic patients because I get better and quicker results than he does. Based on the shortage of your definition of "qualified personnel" and the quality of care, there is no reason a company should be trying to take away qualified HEALTH PROFESSIONALS such as ATHLETIC TRAINERS. As an athletic trainer, I hold a bachelors degree which is 2 more years of training and education than a PTA's associates degree. Not only are athletic trainers in many states nationally licensed but also state licensed, which is more than physical therapists and physical therapist assistants. Athletic trainers are also health professionals which must possess and pass a health professional licensing exam, as do other health professions.

Based on my qualifications and education as an athletic trainer I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P. While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

RE: CMS-1385-P (BACKGROUND, IMPACT)
ANESTHESIA SERVICE

Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boast the value of anesthia work by 32%. Under CMS' proposed rule Meidcare would increase the anesthesia conversion factor by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS' proposal would help to insure tha Certified registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Meidcare beneficiaries with access to anesthesia services.

This is important for many reasons:

1. Medicare currently under-reimburses for anesthesia services, putting the availabilty of anesthesia services for Medicare recipients at risks. With only a 40% of private market rates reimbursement for anesthesia services compared to 80% for other Medicare Part B services.

2. The proposed rule reviews and adjust anesthesia services for 2008, while most other services have already been reviewed and adjusted since jnuary of this year.

3. This propsed adjustment would change the relative value of anesthesia work whch would help to correct the value which have slipped behind inflationary adjustments.

If the propsed change does not occur, or not enacted by Congress, the average 12-unit anesthesia service will be 17% below 2006 payment levels and more than 33% below 1992 levels (adjusted for inflation).

There are 36,00 CRNA's providing anesthsia in every setting requiring anesthesia services. We are the predominant providers of anesthesia in most of the rural and medically underserved areas of the USA. The continued availability of anesthesia to these medicare recipients is dependent in part on adequate reimbursement of these services. I support the agency's acknowledgement of of the undervalue of anesthesia's reimbursement and its proposal to increase the valuation of anesthesia work that boosts Medicare payments.

GENERAL

GENERAL

Dear Sir or Madam:

I am a certified athletic trainer employed by Louisana College. I am an assistant professor teaching in the Athletic Training Educational Program. I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Janet Passman, PhD, ATC

Background

Background

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.

ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.

ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,
Pamela Allred CRNA

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Coding--Multiple Procedure Payment Reduction for Mohs Surgery

Coding--Multiple Procedure Payment Reduction for Mohs Surgery

August 29, 2007

Thomas W. McGovern, MD
5223 West Hamilton Road S
Fort Wayne, IN 46814-9415

The Honorable Herbert Kuhn
Acting Administrator
Centers for Medicare and Medicaid Services
Department of Health and Human Services
Washington, DC 20201
FAX (202) 690-6262

Re: CMS 1385-P: 2008 Medicare Fee Schedule
Coding Multiple Procedure Payment Reduction for Mohs Surgery

Dear Acting Administrator Kuhn:

As the only fellowship-trained Mohs surgeon within a 90-minute to two-hour drive in any direction from Fort Wayne, I am profoundly concerned about the proposed change to the Multiple Procedure Payment Reduction for Mohs Surgery. I appreciate the opportunity to offer comment on section II.E.2 (P-122) of the 2008 Medicare Fee Schedule Proposed Rule.

The proposal reverses a 16 year-old policy of the Centers for Medicare and Medicaid Services (CMS) that the Mohs codes should be exempt from the Multiple Procedure Reduction Rule (MPRR). Because Mohs surgery includes both surgery and pathology services, no efficiency is gained by performing multiple procedures on each patient. The proposed rule contradicts the Relative Value Update Committee s (RUC) policy regarding procedures that qualify for exemption from the MPRR.

This proposal will directly impact my patients access to care, since I will need to reduce surgery to one cancer per patient per day. I cannot cover overhead with a 50% reduction in reimbursement. About 20% of my patients have more than one cancer treated at a time, and many of them travel over an hour to see me or are driven by transportation service providers from nursing homes. I will more likely send patients to other surgeons for repairs after Mohs surgery, since I will not be adequately reimbursed for that aspect of my patients care. During the past several weeks, many of my Medicare patients have expressed their extreme disappointment with the proposed rule.

On behalf of my patients, I ask that you reconsider this proposed rule and provide a permanent exemption for Mohs codes 17311 and 17313.

Thank you for your consideration.

Sincerely,

Thomas W. McGovern, MD

Mr. Kerry N. Weems
Administrator-Designate
Centers for Medicare and Medicaid Services
US Dept. of Health and Human Services
Attn: CMS-1385-P
PO Box 8018
Baltimore, MD 21244-8018

Attention: CMS-1385-P

Dear Mr. Weems,

Subject: Medicare Program; Proposed Revisions to Payment Policies under the Physician Fee Schedule, and Other Part B Payment Policies for CY 2008; Proposed Rule

I am a physical therapist in private practice in the Portland, Oregon area. I have been a practicing Physical Therapist for 20 years and have worked in a variety of practice settings such as hospitals, outpatient clinics associated with hospitals, and private practice. As a private practitioner, being aware and involved with issues that impact my profession and practice are very important.

I have been involved in various capacities in the American Physical Therapy Association (APTA) and its Oregon chapter activities. The issue of physician self-referral is a major topic nationally and locally, and personally it impacts my practice, both as a clinician and business owner. I support eliminating physical therapy as a designated health service (DHS) furnished under the in-office ancillary services exception. I believe this would accomplish the following:

- eliminate the potential for fraud and abuse in arrangements where there is financial interest,
- reduce cost by preventing financial incentive to over-utilize the referral to physical therapy, and
- Improve care by sending patients to the physical therapist who is best qualified to handle the patient's needs.
- Restore fair competition of physical therapy services

The unique nature of the physician owned physical therapy practice has the tendency to encourage a fraudulent relationship. The physicians directly benefit from generating referrals. This sort of design will encourage referral to physical therapy, even if it is not medically necessary. The temptation to refer to physical therapy more frequently and the potential to continue physical therapy beyond what is necessary would be difficult to ignore when there is financial gain involved. While every Physical Therapist has the obligation to treat what is only medically necessary, an employee of a referring physician may fear for their job should they reject unnecessary referrals

Like many other services physicians employ in their office, physical therapy in a physician owned practice is used as a means for additional income. This sort of arrangement has the potential to create over utilization of physical therapy services, by its design. For example, a physician owned practice in my community schedules their physical therapist to see an average of 25-30 patients per day. In my practice I see 11-12 patients per day spending 30 to 45 minutes of one-on-one care. After twenty years of practice, I find this schedule essential to provide the quality of care needed to treat and educate in an adequate manner.

Physician owned physical therapy practices impact on patient care and can limit their ability to access the best services for the patient's individual needs. I used to receive referrals from a spinal diagnostic physician in our local community. Being a specialist, this physician relies on primary care physicians' referrals for his business. In this particular example the primary care physician group that referred to the specialist owned their own physical therapy clinic. The spinal diagnostic physician did not see good outcomes with this physician owned physical therapy clinic and decided to refer patients to my clinic, where I demonstrated better results. This physician was warned by the physicians that referred to him that if he did not refer to their physical therapy clinic that it would affect referrals to his practice. Given this dilemma he felt forced to refer physical therapy to his referrer's clinic despite his desire to refer to my clinic, which produced better outcomes for his patients.

Since Physicians are patients' primary access to musculoskeletal disorders, the referral for profit relationship creates an unfair competitive environment.

Physicians who have Physical therapy in their clinic will boast better care because the communication between therapist and physician is more convenient. This is a myth since a phone call from any location to the physician's office is just as efficient. If a patient's condition deteriorates when I see them in my clinic, I have always been able to get that patient in the same day to see their physician. Furthermore, the physician's physical therapy may be geographically inconvenient for the patient having them drive many miles out of their way to go to therapy when they can be seen at a physical therapy clinic near their home or work.

Most patients are not aware they have a choice in choosing their physical therapist, and physicians who employ physical therapists would not benefit by disclosing this to their patients. The temptation to refer to physical therapy more frequently and the potential to continue physical therapy beyond what is medically necessary would be difficult to ignore when there is financial gain involved. This is one area of healthcare that controlling costs and improving quality care CMS could impact immediately. **I strongly urge CMS to remove physical therapy as DHS permissible under the in-office ancillary exception of the federal physician self-referral laws.**

Sincerely,

Noel M. Tenoso, PT, OCS

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Herb Kuhn
Acting Deputy Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
Attention: CMS 1385 P
P.O. Box 8018
Baltimore, MD 21244 8018

Dear Mr. Kuhn:

I am a urologist who practices in a 12 man single specialty group (Urology) in Akron, Ohio. A large portion of my practice involves the care of Medicare patients especially men with prostate disease. I am writing to comment on the proposed changes to the physician fee schedule rules that were published on July 12, 2007 that concern the Stark self-referral rule and the reassignment and purchased diagnostic test rules.

The changes proposed in these rules will have a serious impact on the way I practice urology and will not lead to the best medical practices. With respect to the in-office ancillary services exception, the definition should not be limited in any way. It is important for patient care for urologists to have the ability to provide pathology services in their own offices. It is equally important to allow urologists to work with radiation oncologists in a variety of ways to provide radiation therapy to patients. We also provide x-ray (CT Scan and ultrasound) diagnostic services that allow rapid, convenient and accurate care, that might be limited if the definition of an in-office ancillary service was limited to those tests and services that are needed to immediately diagnose or treat a patient. Many of my patients know that I am actively involved with where they go to have their treatment and testing. It is my concern that many of my patients who currently have there treatment and testing under my guidance will have to be turned over to hospitals, insurance company run facilities and most importantly: everyone BUT their doctor.

The sweeping changes to the Stark regulations and the reassignment and purchased diagnostic test rules go far beyond what is necessary to protect the Medicare program from fraud and abuse. The rules should be revised to only prohibit those specific arrangements that are not beneficial to patient care.

Thank you for your consideration,

Bradford Moss

Background

Background

As a member of AANA, I write to support the CMS proposal to boost the value of anesthesia work by 32%. If adopted CMS proposal would help to ensure that CRNAs as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services. CRNAs provide some 27 million anesthetics/year in the US, mostly in rural and medically underserved America. Medicare patients depend on our services. I support the agency's acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare Anesthesia payment.
Sincerely,
Ann McHale-Sass, CRNA, ARNP

CMS-1385-P-11990-Attach-1.DOC

#11990

August 29, 2007

Dear Sir or Madam:

Hello. My name is Kelly Kimmel and I've been a Certified Athletic Trainer for 6 years. After working in both collegiate and clinic-secondary school settings, I am now working full time at my church. Though I am not practicing athletic training full time, I do assist other athletic trainers when coverage help is needed. The reason I write is that I believe it is fundamental for you to hear from each of us who represent our profession of athletic training, especially from one who has experience in a clinical setting.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Thank you for taking the time to consider what withdrawing the proposed changes will do for the health and well-being of yourself or someone you love.

Sincerely,

Kelly Kimmel, ATC

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

My name is Ian Petersen and I work for a rehabilitation program called WCS Physical Therapy. I am a Certified Athletic Trainer who helps people get back to work. When Physical Therapists are done with their scripts they will then send their patients to me. Physical Therapists usually work with the patients for one to two hours while I work with the patients for four hours. I give them more advanced flexibility, strength, and stability exercises to allow them to get a smoother transition to work. I also assist some of their patients when necessary. Our company is located in the Chicago, Illinois area and we make quality health care possible with Physical Therapists and Athletic Trainers working together.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

Coding--Multiple Procedure Payment Reduction for Mohs Surgery

Coding--Multiple Procedure Payment Reduction for Mohs Surgery

Over a million Americans per year are diagnosed with skin cancer, and over the last ten years the rate of new skin cancer diagnoses is growing by what many would call epidemic proportions. Mohs micrographic surgery is a common way of treating some of these cancers and is considered the gold standard among treatments for skin cancer, allowing the physician to examine 100% of the cancer margin to insure complete removal of the cancer with loss of as little normal skin as possible. It also provides the patient with the highest cure rate of any treatment for skin cancer. Mohs surgery is an outpatient procedure that utilizes onsite laboratory analysis of excised tissue while the patient waits for the results.

The consequence of applying the multiple surgery reduction rule to the Mohs codes would be a reimbursement reduction to a value less than the cost of providing the service. Therefore, providers will no longer be able to perform more than one Mohs procedure on any patient on a single day. Multiple tumors are commonly diagnosed on one visit, occurring in 10% of my referral practice population. Treatment of only one tumor per day will inconvenience many patients and their friends and families who accompany them for treatment. It will also inconvenience employers when workers are absent from work more frequently for multiple treatments. More importantly, delays in treatment will further increase risk for high-risk patients such as organ transplant patients with multiple squamous cell carcinomas, and for patients with syndromes such as basal cell nevus syndrome. In addition to its application to multiple cancers treated on the same day, the MSRR would apply to repairs performed on the same day as Mohs surgery. According to this new proposal, when Mohs surgery is reimbursed less than a reconstructive procedure on the same day, even the first Mohs code will be subject to the multiple surgery reduction rule. Since costs would not be covered, this may require patients to have their Mohs surgery and their reconstruction done on separate days, or to be referred to other physicians for reconstruction, usually plastic, facial plastic, or oculoplastic surgeons, who work primarily in hospitals or ambulatory care centers where costs of care are higher. The result would be that healthcare costs (ESPECIALLY for MEDICARE) will be higher than they are under the current policy of payment.

I am one of only two skin cancer surgeons in the state of West Virginia with specialized fellowship training to perform this procedure. We are the only West Virginia members of the American College of Mohs Surgery. I have removed approximately 1200 cancers from patients since July 2006 alone using Mohs micrographic surgery. My patients come to me from up to 200 miles away. This rule may require us to limit the number of cancers treated per patient and require more waiting and repeat visits. My Medicare patients, who make up 50% or more of my population will be hit hardest.

I greatly appreciate your assistance in this important matter.

GENERAL

GENERAL

Overall physicains need to be involved in the delivery of services and have the ability to see a fair compensation that allows all areas of medicine to participate. We should bc ablc to dcliver these services in all venues. Limitations in a lot of communities are going to have an adverse impact on less costly and often duplicatcd scrvices cspecially if provided in more costly settings ,ie hospitals or facilities that are purely for profit. Limitng our ehoices are going to be counterproductivc and ultimately more expensive.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Living in a small community we have been able to offer a full time service for lithotripsy in an a heavy stone burden poulation. This is a service that otherwise would not bc cmployed other than on an occasional basis which causes both an increase in proceedures to stabilize a patient and to increase lost time as well as increased hospitalization for pain control. By having a joint venture we have provided an efficient and timely service. We do not need to return to these more costly mcthods and unduc burdens on the patient and thei families.

Resource-Based PE RVUs

Resource-Based PE RVUs

Thc sustainable growth formula must be changed to a more equitable and sutainable method. We can no longer continue to stabilize this method and have physicain continue to absorb losses for seeing Medicare patients. This is especially true when ancillary services are growing at a rapid rate providing egregious profits to pcople on the periphery of medical care.

Background

Background

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS' proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS' proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons:
First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demostrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers' services had been reviewed and adjusted in previous years, effective January, 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
Third, CMS' proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS' proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America's 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency's acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Coding-- Additional Codes From 5-Year Review

Coding-- Additional Codes From 5-Year Review

To CMS:
I am a Pediatric Cardiologist and Director of the Echocardiography Laboratory at Children s Memorial Hospital. I am writing this letter because it has recently come to my attention that CMS is proposing a change to eliminate CPT code 93325 and bundle this code into other CPT codes. In my opinion, this change is being pursued without following the appropriate process and as a result the usual specialty societies (i.e. the American College of Cardiology, American Heart Association and American Society of Echocardiography) have not had an opportunity to poll their membership and assess the proposed change in a careful, systematic manner.

Color flow Doppler is an integral part of all echocardiograms performed to assess patients with congenital and non-congenital heart disease. This technique is used in conjunction with other imaging to define structural and physiologie abnormalities, as well as a guide for positioning the cursor to perform other Doppler modalitics. It involves sonographer time for performance and physieian time for interpretation. I am concerned that this change will adversely impact access to care of patients with congenital heart disease. Programs such as Children's Memorial Hospital, care for patients with the resources to afford private insurance but also for those with Medicaid or no coverage at all. This change will reduce reimbursement for congenital cardiac services across all payor groups and therefore will reduce current resources which allow us to support programs that provide this much-needed care to our patients. Our children s hospitals and academic programs arc already challenged with respect to resources and this change will only make matters worse.

I am requesting that CMH withdraw the proposed change with respect to bundling CPT 93325 with other echocardiography codes until an appropriate review of all related issues can be performed, with the prescribed process and timeframe, in order to achieve the most appropriate solution.

Thank you for your consideration.
Sincerely,

Luciana Young, MD, FAAP, FACC, FASE
Director, Echocardiography Laboratory
Children's Memorial Hospital
Associate Professor, Pediatrics
Northwestern University Feinberg School of Medicine

RE: Docket #1385-P Therapy Standards and Requirements, Physician Self-Referral Provisions

BRIEF INTRO ABOUT SELF: I work at the Dallas VA Medical Center as a Registered Kinesiotherapist. I have a B.S. in Kinesiology with certification in Kinesiotherapy. I have been a therapist for seven years.

I am writing today to voice my opposition to the proposed therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and other facilities proposed in Federal Register issue #1385-P. As a Kinesiotherapist, I would be excluded from providing physical medicine and rehabilitation services under these rules.

I am concerned that these proposed rules will create additional lack of access to quality health care for my patients. This is particularly important because my colleagues and I work with many wounded Veterans, an increasing number of whom are expected to receive services in the private market. These Medicare rules will have a detrimental effect on all commercial-pay patients because Medicare dictates much of health care business practices.

I believe these proposed changes to the Hospital Conditions of Participation have not received the proper and usual vetting. CMS has offered no reports as to why these changes are necessary. There have not been any reports that address the serious economic impact on Kinesiotherapists, projected increases in Medicare costs or patient quality, safety or access. What is driving these significant changes? Who is demanding these?

As a Kinesiotherapist, I am qualified to perform physical medicine and rehabilitation services. My education, clinical experience, and Registered status insure that my patients receive quality health care. Hospital and other facility medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards and accepted practices.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the health care industry. It is irresponsible for CMS to further restrict PMR services and specialized professionals.

It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to reconsider these proposed rules. Leave medical judgments and staffing decisions to the professionals. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,
Parisa Mazandarani, RKT

I write to support the CMS proposal to boost the value of anesthesia work by 32%. Under CMS's proposed rule Medicare would increase the anesthesia conversion factor by 15% in 2008 compared w/current levels. (72 FR 38122, 7/12/2007). If adopted, this would help to ensure that CRNAs as Medicare Part B providers can continue to provide Medicare with cost-effective, high quality anesthesia service.

Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Physician self-referral to physical therapy services ultimately hinders the growth of the profession. As a new graduate of the University of Southern California's Doctor of Physical Therapy program, I have been taught the latest and greatest research affecting our profession, and more importantly, our patients. I know that when a patient is referred to me, I use evidence-based treatments that I learned at USC to get them back on their feet to be a functioning member of society. Not only do I use the knowledge that I earned at USC, but I am an active member in the American Physical Therapy Association which keeps me up to date with the research. I want my patients to know that they are receiving quality care, and to hold physical therapists in high regard. Physician self-referral does not allow those physical therapists to practice with evidence-based practice. Often, they are under the strict supervision of physicians who do not quite understand the practice of physical therapy. I am aware of several physician-owned clinics that practice with only physical therapy assistants performing the treatment, and billing under one physical therapist's license number. This image of physical therapy ruins the profession, as it does not emulate quality care. In America, we are given the freedom of choice; physician self-referal does not allow patients the freedom to choose a quality physical therapy clinic that uses research-proven interventions. I urge you to reconsider the physician self-referral provision in the hopes that you have the patients' interests at heart.

Sincerely,
Karen Hwang, PT, DPT

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

I am requesting Medicare law maker to reconsider bundling the payment policy for color flow in Echo. Color flow Doppler is important in evaluating valvular regurgitation and cardiac shunting. It is necessary in every Echo exam; therefore, taking up more time and effort for technicians as well as interpreting physicians. It also cost more to use Ultrasound with good color Doppler. Cutting the reimbursement for Color Doppler would mean less quality in patient care. Thank you for reconsider not to bundle the Color flow Doppler reimbursement.

GENERAL

GENERAL

Dear Sir or Madam:

I am a certified athletic trainer working in the college setting, and I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Mary McLendon, ATC, NCTMB

CMS-1385-P-12017-Attach-1.DOC

#12017

Dear Sir or Madam:

My name is Brad Pierce and I am currently a 21 year old fourth year student at Marietta College seeking a B.S. in Athletic Training. I am also employed by Marietta Memorial Hospital where I work in the Orthopedic Outpatient Physical Therapy Department as a Rehab Aide. When I first heard of the proposed changes to 1385-P and the impact that it would have on my position as an athletic trainer in a clinical setting I was immediately concern. Upon my graduation from Marietta College I had planned on working as an athletic trainer in a clinical setting for a year before moving onto graduate school. The changes, if passed, could limit my career as a athletic trainer along with countless others just like me.

I am writing concerning the recent proposed changes to staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P. I would at this time like to state my opposition to these proposed changes due to the restriction of medical access that it could cause to patients I will see in the future.

As a future athletic trainer I will be more than qualified to perform physical medicine and rehabilitation services, which you know is not he same as physical therapy. The clinical experience I have gained, the preparation for the national licensure exam, and four years of education make me more than qualified to provide quality care to my patients.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the healthcare field today. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas just like Marietta, Ohio, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Brad Pierce

Administrator-Designate
Center for Medicare and Medicaid Services
US Dept. of Health and Human Services

Attn: CMS-1385-P
PO Box 8018
Baltimore, MD 21244-8018

Mr Weems,

My name is Matthew Seabrook, and I am a physical therapist with nearly fifteen years of experience. I own a private outpatient practice, Dresher Physical Therapy, in the northern suburbs of Philadelphia.

I am writing to urge CMS to remove physical therapy as a designated health service permissible under the in-office ancillary exception of the federal physician self-referral laws.

To not do so is to continue to passively allow unethical self-referral behavior, waste of health care resources, and abuse of the best interest of Medicare beneficiaries.

I have seen countless instances of physicians abusing the self-referral loophole that exists in the Stark Law just to capture additonal revenue in their offices. Clearly it is more appropriate and equally convenient for patients to receive services in an independendent physical therapy office than in their physician's office due to the repetitive nature of rehab services.

Thank you for consideration of my comments.

Sincerely,

GENERAL

GENERAL

As the Founding President of the Society for Geriatric Anesthesia, I, and my colleagues, recognize that the amount of care provided to older patients will increase substantially for the foreseeable future. Their anesthetic care is considerably more complicated and difficult than for their younger, healthier counterparts. These patients are at high risk for perioperative complications and present with multiple co-morbid disease processes that require complex geriatric expertise. I strongly believe that one of the reasons anesthesiologists show little interest in older patients is because they are being asked to care for the sickest patients while being paid poorly for this more difficult care. It is a basic human response to feel that if nobody values our service, why show an interest? In fact, we do care, and we (anesthesiologists) take great pride in what we can accomplish toward helping older patients through the stress of surgery. But the low value CMS places on anesthetic care in comparison to other medical specialties is demoralizing to me - and I am one of the strongest proponents of geriatric anesthesia in the country!

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

Re: CMS-1385-P Anesthesia Services

Dear Administrator:

As a member of the American Association of Nurse Anesthetists(AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS' proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS' proposal would help to
ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services. This increase in Medicare payment is important for several reasons.
1. First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for
Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
2. Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers' services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
3. Third, CMS' proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments. Additionally, if CMS' proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be
reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America's 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency's acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,

Guy Picard, CRNA, MSN

GENERAL

GENERAL

Dear Sir or Madam:

I am a graduate assistant at University of Toledo, and a certified athletic trainer. I work at the local high school in relation with physical therapy clinic.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilitics proposed in 1385-P.

Whilc I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that thcsc proposcd rulcs will crcate additional lack of access to quality health care for my patients.

As an athlctic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical expcrience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to pcrform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Shiho Goto, ATC/L

Physician Self-Referral Provisions

Physician Self-Referral Provisions

As a physical therapist I disagree with any legislation limiting access to physical, occupational, or speech therapy services where physician self-referral is provided. I don't believe the data is present to constitute a financial relationship between a therapist and physician creating overutilization of services. Referral and treatment options should be left up to referring physicians including what practitioners the physician may refer to. The quality and quantity of services in physician self-referral practices is currently governed appropriately by legislation enacted in the past several years and further legislation would only hinder access to services provided to Medicare beneficiaries. Thank you for your concern. Again, I am opposed to any further legislation limiting access to physician self-referral therapy services.

RE: Physician Self-referral issues

Dear Mr. Weems:

I am a physical therapist who has worked in private practice in Wisconsin for 17 years. I would like to comment on the July 12th proposed 2008 physician fee schedule rule, specifically the issue surrounding physician self-referral and the in-office ancillary services exception.

At Freedom Physical Therapy our staff is very well educated with experienced therapists who provide exceptional care. With declining reimbursement and limited visits with both Medicare and other insurers it has become increasingly difficult financially, for us to provide the high level of patient care our patients have experienced in the past. To further compound the problem, we now have physician groups reaping the financial rewards of referring patients to therapy practices they own instead of independently non physician owned therapy practices that often provide superior and more cost-effective care. This loophole is possible due to the in-office ancillary services exception to the Stark Law, as physical therapy is currently considered a designated health service (DHS) . In some cases, PT s are not even treating these patients, but instead by PTA s and ATC s under the physician s direction. This is often unethical and needs to stop, so patients do not suffer from receiving unlicensed physical therapy skills.

Generally speaking, physical therapy services are provided on a multiple treatment basis. With that said, it is no more convenient for the patient to receive PT services 2-3 times per week in the physician s office than to attend an independent physical therapy location. Furthermore, physician-direct supervision is not necessary to administer physical therapy services. In fact, an increasing number of physician-owned physical therapy clinics are using the reassignment of benefits laws to collect payment in order to circumvent incident-to requirements.

Thank you for your consideration of my thoughts and comments. I hope these comments have helped to highlight the abusive-nature of physician-owned physical therapy services and support PT services removal from permitted services under the in-office ancillary exception.

Sincerely----------A Concerned Physical Therapist in zip code 53213

Physician Self-Referral Provisions

Physician Self-Referral Provisions

I am a physical therapist with 15 years of experience and lately I have found it troubling the emergence of physician owned rehab clinics. Earlier in my career they were just small rooms in a single Dr. s office. No real threat to competition there. I also see it being acceptable in a rural setting where there may be only a Dr s office for miles around and he is able to provide rehab services to his patients. But the emerging trends that I have seen and have experienced first hand in several cities are the large inter-disciplinary group practices and/or orthopedic groups that provide rehab services. Many times these groups have several clinics in a geographic area not just one central office.

These arrangements not only can affect the quality of care received by Medicare beneficiaries but also stifle competition in the market place. The private practice I work for has been devastated when the large orthopedic group opened up there own rehab facility. Our hand therapy business has been cut in half if not more. We also have past patients who tell us when they have returned to us for another illness that required rehabilitation their doctor wanted to send them to their own clinic so they could keep a closer eye on them . This is even after the patient has told them they wanted to return to our clinic.

The potential for fraud and abuse can be found in any type of practice whether it is privately owned, corporate owned or physician owned. But its hard argue for physician owned practices because they hold all the cards when it comes to patient referrals.

Thank you for your time.

Background

Background

Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

? First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
? Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
? Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

GENERAL

GENERAL

Dear Sir or Madam:

My name is Rochelle Lauret, and I work as a Certified Ahtletic Trainer for the Orthopedic Institute doing out reach to O'Gorman High School in Sioux Falls, SD. I have my masters degree in Sports Medicine and have been a working ATC since 1990. I also have a certification in the area of strength and conditioning.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Rochelle M. Lauret, MS ATC CSCS

Re: CMS-1385-P

Dear Mrs. Norwlk:

I am writing to express my support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule.

Today. Medicare payment for Anesthesia services stands at just $16.19 per unit. This is less than 50% of the ujnit value in absolute terms as compared to the unit value in 1990, not taking into account inflation.

The RUC has recommended that CMS increase the anesthesia conversion factor to offset a calculated 32% work undervaluation. I am pleased that the Agency accepted this small increase in its proposed rule.

Medicare patients require expert Anesthesiology care, and this small increase will ensure that there are still a few Anesthesiologists who are willing to take care of the Medicare population.

Thank you for your consideration of this serious matter.

Cliff Friesen M.D.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

My name is Clint Sanders and I am an athletic trainer in the state of Tennessee. I am currently employed by STAR Physical Therapy, LLC of Nashville, TN as a clinical athletic trainer and in a community outreach setting to area high school athletes, where I have been employed the last 5 years. I was educated at the University of Tennessee, where I received a BS in Exercise Science and MS in Human Performance and Sports Studies. During my time at UT I also spent five years obtaining clinical instruction in athletic training with the UT Men s Athletic Department. I have been a practicing athletic trainer for six years and I have spent many years caring for people the Tennessee, from the most talented athletes to the youngest of children and eldest of adults in my community.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P. While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

In addition, I question the following statement from the Federal Register (Vol.72, No.133) that notes CMS considers education and training the main qualifications for assuring skilled treatment for Medicare beneficiaries: We are seeking comment on appropriate grandfathering provisions relating to qualifications of therapists and assistants to assure that skilled therapists and assistants with comparable and appropriate education and training treat Medicare beneficiaries in all settings. p. 72

I am concerned that this language seems to imply that comparable education and training are the important factors for determining qualification of providers of physical medicine and rehabilitation services, yet athletic trainers, who are required to have significant educational background and training in physical medicine and rehabilitation in order to become nationally certified, are not deemed to be comparable to any of those professions that CMS proposes to include in this grandfathering provision. This inequity by CMS is not justified, given the many similarities of the educational and training backgrounds of PTs, OTs, and ATs.

As an athletic trainer, I am highly qualified to perform physical medicine and rehabilitation services. These services are regulated by the State of Tennessee, where I am licensed to practice as an athletic trainer under the direction of the highly qualified physicians in my state. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. Since, State law and hospital medical professionals have deemed me qualified to perform these services, I am extremely concerned that these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Clint Sanders, MS, LAT, ATC

Background

Background

I am a provider of predominantly Medicare patients. I am concerned for their access to appropriate anesthesia services. As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

RE: CMS-1385-P (BACKGROUND, IMPACT)
ANESTHESIA SERVICES
Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to sup for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia wor CMS' proposed rule Medicare would increase the anesthesia conversion factor (CF) by compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS' proposal wou ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B provi to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

°
First, as the AANA has previously stated to CMS, Medicare currently under-reimburses anesthesia services, putting at risk the availability of anesthesia and other health Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) others have demonstrated that Medicare Part B reimburses for most services at approx 80% of private market rates, but reimburses for anesthesia services at approximately private market rates.

°
Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Pa providers' services had been reviewed and adjusted in previous years, effective Janu However, the value of anesthesia work was not adjusted by this process until this pr

°
Third, CMS' proposed change in the relative value of anesthesia work would help to c value of anesthesia services which have long slipped behind inflationary adjustments

Additionally, if CMS' proposed change is not enacted and if Congress fails to revers growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in reimbursed at a rate about 17% below 2006 payment levels, and more than a third belo levels (adjusted for inflation).

America's 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in requiring anesthesia services, and are the predominant anesthesia providers to rural underserved America. Medicare patients and healthcare delivery in the U.S. depend on availability of anesthesia services depends in part on fair Medicare payment for the agency's acknowledgement that anesthesia payments have been undervalued, and its pro the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment

Sincerely,

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

I am writing in regards to in-office ancillary service arrangements that have impacted the delivery of quality Physical and Occupational Therapy.

The in-office ancillary services exception has created a loophole which has resulted in many physician-owned arrangements that provide substandard physical and occupational services. Physicians are in a position to refer Medicare beneficiaries to in-office physical and occupational services in which they have a financial interest. There is an inherent financial incentive to overutilize services under the in-office ancillary services exception.

Additionally, therapy treatments tend to be repetitive in nature and often follow a "cook book" approach rather than identify the individual needs of a patient's particular deficits. Unfortunately, I've even heard patients reporting that their physicians have "better trained therapists" to provide services. (In actuality, I am 1 of 2 certified orthopedic specialists in the county, the other does not work for the physicians.)I have doubts the that indiviualized treatment plans are even addressed or exist.

I have often worked with patients who informed me that their individual physician never mentioned an individual's right to choose their therapy provider; rather, they were simply advised to go schedule therapy "down the hall." Patient's are often mislead into believing their care will be more closely followed by the physician since they tend to reside in the same building.

Finally, I do not feel that the actual therapist working for a referring physician could actually strive to be a strong patient advocate. If the PT finds a "serious" problem either overlooked by the physician or determined to be "not really a problem" by the physician, could the PT really speak out or recommend the patient seek a second opinion or specialist appointment? No, I'm certain there would be a fear of losing their job. (I have actually known PTs in facilities who are afraid of confronting there referring "BOSS" doctors.)

Thank you for considering these comments and eliminating this in-office ancillary services .

Sincerely,

Mark Wise, PT, OCS

TRHCA-- Section 201: Therapy CapS

TRHCA-- Section 201: Therapy CapS

Dear Sir or Madam:
I am writing this letter to express my concern with respect to the Medicare Therapy Cap on outpatient physical therapy services which ultimately impacts the ability to advance these elder patients to their maximal physical abilities and functional independence. This "cap" limits the financial allotment of therapy on Medicare patients and dramatically affects the ability to achieve maximal functional independence for these older patients in the community. You must certainly understand that everyone heals at a different pace and everyone's individual needs and goals from therapy differ to such a great extent that maintaining the cap will only force people into "cook book" treatment approaches which may leave them in a "handicapped" state. For example, perhaps Mrs. Smith and Mr. Brown both have knee replacement surgery and are released on the same day from the hospital, they start outpatient PT after 3-4 home therapy visits for 1 week. However, Mr. Brown complains of pain in his leg and the PT discovers a blood clot and Mr. Brown needs to return to the hospital. He returns 1 week later with some regression in his mobility and strength while Mrs. Smith continues to progress. Perhaps Mr. Brown "catches up" after some time; however, he unfortunately has to climb a flight of 13 steps to get to his bed at night or use his commode; however, he has limited strength and endurace which allows him to only complete 5 steps. Oh, and now Mr. Brown has reached his cap. Now what? Do you want to tell Mr. Brown too bad but your insurance will only allow you get half way up your stairs? Certainly not! Put an end to the cap and continue to monitor for abuse and exhuberant treatment; but please do not let the Mr. Brown's of the world be stuck half way up the stairs. Would you allow a surgeon to perform an intense open hear surgery but awaken Mr. Brown and inform him that he would have to pay out of pocket for the surgeon to close the wound?

Thank you for considering these comments.

Sincerely,

Mark B. Wise, PT, OCS

Physician Self-Referral Provisions

Physician Self-Referral Provisions

I am writing to implorc CMS to remove physical therapy from the 'in-office ancillary services' exception to the federal physician self-referral laws.

As a physical therapist I personally know physicians and physical therapists who work in a self-referral environment. In my experience these profcssional associations have been established for the financial benefit of the physician resulting in overutilization of physical therapy services by those physicians and compromised patient care. Some examples are as follows:

I know of physicians who cmploy athletic trainers to carry out care instead of physical therapists. Although they do not have the equivalent training or skill level to providc carc at the same standard as a physical therapist, they are cheaper to hire.

I havc observed physicians who have a financial interest in therapy refer their patients to therapy more often and for longer periods of time than those who do not have a financial interest.

I havc seen several patients who went to a physician who had a physician owned physical therapy practice and they felt pressured to utilize their therapy service although they did not feel they received the same level of care as compared to an independent clinic.

I am aware of a physician owned practice in which the therapist quit and another therapist had not been hired. The physician isntructed the patient to delay getting care for weeks until a new therapist was hired in spite of the patient's request to begin treatment immediately.

Physicians who refer to independent clinics refer to clinics where their patients are seen by experienced clinicians who provide the best care for their patients and obtain the best results. This breeds competition among therapists at these clinics to achieve a high level of skill, obtain excellent outcomes in the fewest number of visits and provide outstanding patient service. This is in contrast to several physicians who opened physician owned therapy clinics and hired newly graduated or inexperienced therapists. They hired the cheapest labor at the expense of their patients.

In conclusion, for the protection of the public, physician financial interests in physical therapy needs to be eliminated and I respectfully request you remove physical therapy from the 'in-office ancillary services' exeeption to the federal physician self-referral laws.

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation's seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation—a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC's recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Issue Areas/Comments

Background

Background

reimbursement for anesthesia services is woefully inadequate. If not corrected to bring it to levels that other specialities have been granted, the quality and quantity of providers is bound to suffer. Already hospitals are finding it necessary to augment the income of anesthesia practices in order to maintain coverage and the situation will only get worse. Anesthesia care is so scarse these days that less vigilant providers are used too often. Patients must never suffer because a more proficient provider was not available to do their anesthesia. Anesthesia is one of the few times that people must give full control for life or death over to a stranger. We all deserve proficient, vigilent care while we are at the mercy of a complete stranger in a cold, sterile room.

Payment For Procedures And Services Provided In ASCs

Payment For Procedures And Services Provided In ASCs

As we all know the move to ASCs is both cost efficient and patient friendly. However reimbursement for implants is poor or nonexistant. To continue the positive effects of the use of ASCs reimbursement must be made equal to the reimbursement of inpatient facilities. ASCs provide equal if not better care and patients are not exposed to resistant bacteria and rampent bureaucracy.

Therapy Standards and Requirements

Therapy Standards and Requirements

Dear Sir or Madam:
I am a Physical Therapist practicing in a rural setting. I have been practicing for the past 15 years in both hospital and non-hospital settings. Currently, I am the Assistant Director of Rehab services for Missouri Delta Medical Center. Being in a rural setting, staffing has been an ongoing issue. Qualified Professionals are desperately needed especially as our patient population continues to grow.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.
While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.
My colleagues, athletic trainers, are highly qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. Their education, clinical experience, and national certification exam ensure that patients receive quality health care. State law and hospital medical professionals have deemed them qualified to perform these services and these proposed regulations attempt to circumvent those standards.
The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.
Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.
Sincerely,
Scott A. Heeb P.T. MO101392

Background

Background

Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,

Brent Ledford CRNA

GENERAL

GENERAL

I implore that the reimbursement increase for anesthesiologists should be increased. Anesthesiologists have maintained the highest safety standards, far exceeding the safety standards of our safe commercial aviation industry. For many years our hard work has not been rewarded or recognized. Since most of the surgeries occur in individuals older than 50 years old, these patients come to the operating room with many, many medical issues, i.e diabetes, heart disease, pulmonary disease, renal failure.The average patient that is coming to the operating room is older and sicker. This translates into complicated anesthetic management, greater risk, and lengthier procedures. As an example, we are seeing more and more 90 year old patients having surgery. Personally, I was involved in the care of a 92 year old lady undergoing her third heart bypass surgery--she left the hospital after 8 days and did well in her recovery.

In addition, surgical techniques are getting more complicated and involved. New techniques like robotic heart surgery or prostate surgery presents new challenges to our field that we must face. These procedures are longer and present their own challenges that were not present five or ten years ago. As a specialty we have grown in our skill, versatility, and knowledge.

Anesthesia is an evolving specialty that grows in the scope of knowledge and resources that the anesthesiologists must have at hand every day in the OR. We as physicians are working harder and longer because our patient population is sicker, older, and undergoing longer and more complicated surgical procedures.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

The original in-office exception was created to allow certain testing to take place at the time of, or incident to, a patient visit, without leaving the doctor s office. Congress assumed that such testing only involved simple examinations, such as laboratory tests on body fluids and x-ray tests to evaluate the status of fractures. Importantly these excepted tests would be necessary at the time of the office visit for contemporaneous decision making. Congress believed that the exception would be necessary for patient convenience and speed of treatment and, because of its narrow scope, the possibility of inappropriate financial gain would be limited.

Application of the in-office exception beyond its intended scope has increased over time and now represents the majority of its use. Specifically, advanced imaging tests, such as CT, MRI, and cardiac nuclear testing have become commonly billed under the in-office exception and the very use of the term in-office has become stretched to an unrecognizable extent. The advanced imaging tests clearly lie outside of Congress intentions because they are almost never performed the same day as the office visit. So in reality the argument that these tests are necessary to assist the physician at the time of the visit is spurious. These expensive machines are not kept empty in the chance that a scan may be suddenly necessary. Rather the imaging tests are scheduled, sometimes several weeks in advance. The term in-office now encompasses numerous creative arrangements, some legal, but generally designed to flout the intent of the in-office exception. Comments from CMS in the 2008 Proposed Rule recognize this development. Financial conflict of interest now exists as the primary unifying characteristic of these arrangements. Physicians generate more revenue by ordering more tests. If they also provide professional component services, they may have a second conflict of interest because they can interpret the imaging tests in a way that justifies additional surgeries or interventional procedures on their patients. In other words, they can function as judge, jury and executioner.

This contained patient encounter, whereby the treating physician orders the test, performs it and gets paid for it, precludes other providers from competing on the basis of quality and service, and limits the incentive for the self-referring physician to focus on quality and service. In general patients imaged in a self-referred arrangement are not made aware of the fact that their options may be limited in this fashion. What is more, patients do not have a way of knowing that better options may exist in their community.

CMS might consider some of the following recommendations to refine the in-office ancillary exception for imaging services;
a. Modality-specific
i. no exception for CT, MRI, nuclear medicine, including PET and PET/CT
ii. exception for urgent/emergent, subject to audit
b. Time-specific no exception if different date of service from patient encounter, subject to audit
c. Quality Assurance technical component reimbursement only to accredited imaging centers/equipment
d. Non-specialist physicians concern about use of specialized services diminished if above proposals enacted

I appreciate the opportunity to submit comments and hope that CMS will take the steps necessary to modify the physician self referral prohibitions and ability to mark-up services to ensure appropriate utilization of imaging services .

Background

Background

Dear CMS Administrator:

I am requesting that you finalize the proposal to increase the value of anesthesia work by 32% and to increase the anesthesia conversion factor up 25% in 2008. I have been a nurse anesthetist for the past 19 years. Congress has made it easier every year for more people to join the ranks of medicaid and we have many more people turning medicare age yearly. Our anesthesia reimbursement has been increased from time to time only to be decreased later. The anesthesia rates have always been extremely undervalued. Anesthesia providers have one of the lowest rates of reimbursement campared to all other types of providers. The amount we get paid to provide these services to both medicaid and medicare patients has reached a ridiculous low level. It is generally not enough to even cover our overhead. It is basically one fifth of a normal billing charge. The safety of the patient during a surgery is literally in our hands yet we receive very little for our service and expertise. Large hospitals, like the one I practice at, take the majority of the medicare and medicaid patients from our community while more of those with insurance are being sent by their own doctors to the physician owned surgical centers and physician owned hospitals. Congress has done nothing to stop this unethical practice. We are the centers open 24/7 who take care of everyone irregardless of their ability to pay. As nurse anesthetists we are also the predominant anestheaia providers to rural and medically underserved America. The hospital still does fairly well with their reimbursement but the anesthesia services really take a financial hit. The day will come when we will not be able to cover these services and will be forced to go to the private hospitals or surical centers in order to provide for our own families. I support the agency's acknowledgment that anesthesia payments need to be increased. Thank you for your help in this critical need.

Sincerly,
Darrell Jenkins

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Therapy Standards and Requirements

Therapy Standards and Requirements

I am an Athletic Trainer and Physical Therapist with 19 and 15 years of experience respectively and I currently work in a private practice setting. I have also worked in the hospital and corporate settings. The fact that I have worked in both professions and in many settings gives me reason to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in1385-P.

Working in both fields I have noticed the lack of access and workforce shortages to fill therapy positions throughout the industry. The Athletic Trainer is a very viable option in the rehabilitation arena to help maintain access to healthcare for many beneficiaries. I have worked with many rehab professionals over the years including PTA s. PTA s are recognized as qualified providers but yet they have 2 years of training. An Athletic Trainer on the other hand has at least a baccalaureate degree and most have post-baccalaureate degrees and are trained to evaluate and treat patients and provide rehabilitation if needed. Yet in the PT field they are considered non licensed personnel but yet again many Athletic trainers are licensed in their respective states. Many states do not even recognize the PTA as a licensed provider. Do not get me wrong the PTA has a place but so does the Athletic Trainer if not more so.

Given my experience and the fact that I have worked in various settings with various healthcare workers and knowing what each professional is capable of doing, I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Thank you for your time.

Background

Background

August 20, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018

RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES

Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to
ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for
Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.

ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007.
However, the value of anesthesia work was not adjusted by this process until this proposed rule.

ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically
underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,
John Bour CRNA

Issue Areas/Comments

Resource-Based PE RVUs

Resource-Based PE RVUs

Dear Mr. Weems:

I would like to thank you for the opportunity to comment on the Proposed Rule CMS-1385-P, Revisions to Payment Policies under the Physician Fee Schedule, and Other Part B Payment Policies for CY 2008 (the Proposed Rule) published in the Federal Register on July 12, 2007 As requested, I have limited my comments to the issue identifiers in the Proposed Rule.
There are approximately 7,000 physicians practicing interventional pain management in the United States I am included in this statistic. As you may know physician offices, along with hospital outpatient departments and ambulatory surgery centers are important sites of service for the delivery of interventional pain services.

I appreciated that effective January 1, 2007, CMS assigned interventional pain and pain management specialties to the all physicians crosswalk. This, however, did not relieve the continued underpayment of interventional pain services and the payment shortfall continues to escalate. After having experienced a severe cut in payment for our services in 2007, interventional pain physicians are facing additional proposed cuts in payment; cuts as much as 7.8% to 19.8% in 2008 alone. This will have a devastating affect on my and all physicians ability to provide interventional pain services to Medicare beneficiaries. I am deeply concerned that the continued underpayment of interventional pain services will discourage physicians from treating Medicare beneficiaries unless they are adequately paid for their practice expenses. I urge CMS to take action to address this continued underpayment to preserve Medicare beneficiaries access.

The current practice expense methodology does not accurately take into account the practice expenses associated with providing interventional pain services. I recommend that CMS modify its practice expense methodology to appropriately recognize the practice expenses of all physicians who provide interventional pain services. Specifically, CMS should treat anesthesiologists who list interventional pain or pain management as their secondary Medicare specialty designation, along with the physicians that list interventional pain or pain management as their primary Medicare specialty designation, as interventional pain physicians for purposes of Medicare rate-setting. This modification is essential to ensure that interventional pain physicians are appropriately reimbursed for the practice expenses they incur.

RESOURCE-BASED PE RVUs

I. CMS should treat anesthesiologists who have listed interventional pain or pain management as their secondary specialty designation on their Medicare enrollment forms as interventional pain physicians for purposes of Medicare rate-setting.
II. CMS Should Develop a National Policy on Compounded Medications Used in Spinal Drug Delivery Systems
III. CMS Should Incorporate the Updated Practice Expenses Data from Physician Practice Survey in Future Rule-Making
IV CMS Should Work Collaboratively with Congress to Fix the SGR Formula so that Patient Access will be preserved.

Thank you for the opportunity to comment on the Proposed Rule. My fear is that unless CMS addresses the underpayment for interventional pain services today there is a risk that Medicare beneficiaries will be unfairly lose access to interventional pain physicians who have received the specialized training necessary to safely and effectively treat and manage their complex acute and chronic pain. We strongly recommend that CMS make an adjustment in its payment methodology so that physicians providing intervention pain services are appropriately and fairly paid for providing these services and in doing so preserve patient access.

Sincerely,
Shawn G. Dunn, M.D.

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

Benjamin Pringle here, originally from Boston, MA and graduate of Northeastern University with a Bachelors of Science in Athletic Training. I am a Certified Athletic Trainer and a Strength and Conditioning Specialist now Interning with the Portland Trailblazers as an additional assistant athletic trainer, strength coach and equipment manager.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.
While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.
As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Athletic Trainers are some of the most versatile and well rounded health care professionals in this country. We combine the general skills of a physical therapist, strength and conditioning coaches, first responders, risk management professionals and act as a general extension of orthopedic, internal medicine as well as many other medical doctors. To restrict the practice of Athletic Trainers from what our education allows us to perform is not only hurting an up and coming profession but mostly taking away from patients in need more options and access to the health care that they need. The general health care system in this country is far from perfect and should be working together to become stronger as a team of professionals to improve patient care.

Sincerely,
Benjamin J Pringle, ATC, CSCS

Geographic Practice Cost Indices (GPCIs)

Geographic Practice Cost Indices (GPCIs)

We have lost and can not recruit physicians to our community due to area 99 reimbursement rates as compared to our cost of living. Median home prices are over $800k. Staffs here are paid up to 30% higher than many other parts of the country. When our staff members are offered higher paying jobs at local hospitals, they generally take the jobs. The lack of independent physicians in the community is allowing the proliferation of large practice foundations. This is bad for patients with unique diseases and trauma/ER patients. Santa Cruz County needs to be lifted out of area 99. It has hurt our ability to provide timely medical care and permit adequate access to care as we struggle to recruit new physicians to our community. Medicare rates in our community have affected our insurance contracts in a negative way as well. Many of our colleagues have picked up and moved into other communities in the bay area, some of which pay up to 25% higher reimbursement rates. The remaining physicians are working overtime to keep up with patient demand. Many suffer burnout or ignore their families. This needs to be solved soon.
thank you

Technical Corrections

Technical Corrections

Do NOT eliminate patient reimbursement for x-rays taken by a radiologist requested by a non-treating physician and then used by a doctor of chiropractic(chiropractor). If approved this proposal would reverse a long-standing policy. This could severely decrease the chiropractic profession's ability to care for Medicare patients. X-rays, when needed, are important in chiropractic assessment of Medicare patients, and if approved Medicare patients may suffer by this proposed change in coverage, by requiring unnecessary and additional visits to their medical providers, significantly driving up costs of patient care. The proposed change would specifically eliminate Medicare reimbursement in connection with the referral of a patient by a doctor of chiropractic to a radiologist or other non-treating physician for x-rays. X-rays are often taken to rule out contraindications to care or determine appropriat treatment plan of action and determine necessity for other diagnostic testing such as MRI. I urge you to eliminate the proposal to eliminate patient reimbursement for x-rays taken by a radiologist requested by a non-treating physician and then used by a doctor of chiropractic. Thank you. Background

Background

Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018
Baltimore, MD 21244 8018
August 20, 2007
RE: CMS 1385 P (BACKGROUND, IMPACT)
ANESTHESIA SERVICES
Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

? First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.

? Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.

? Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,

Tyler Daniels, CRNA

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES

Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.

First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

One of the areas affected by the undervaluation of anesthesia services is the use of regional anesthesia (epidural and other nerve block infusions) for pain management after surgery. Typically, this kind of pain management requires two, three or more days of continuous management to maintain postoperative pain at tolerable levels. This kind of pain management is particularly needed for major surgeries such as lung resections or major abdominal surgery. The lack of regional pain management not only increases pain levels, but also increases the rate of complications after surgery because patients cannot breathe as well or cannot get out of bed as early because of pain.

Large anesthesia groups typically subsidize the costs of postoperative pain management. Smaller community hospitals or individually practicing anesthesiologists, however, cannot afford to offer these essential services.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

My name is Jim Lovell. I am employed as an athletic trainer. I hold a Master's degree, and am certified by the NATABOC as an athletic trainer, licensed by the state of Georgia. I also hold EMT credentials and licensure.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Jim Lovell, M.Ed., ATC, EMT

This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Sincerely,

Wei Chao, MD

RE: Medicare Program; Proposed Revisions to Payment Policies under the Physician Fee Schedule, and Other Part B Payment Policies for CY 2008; Proposed Rule

PHYSICIAN SELF-REFERRAL ISSUES

Dear Mr. Weems:

The following comments are on behalf of the Minnesota Chapter of the American Physical Therapy Association (MN APTA). I currently practice in a Physical Therapist-owned private practice, having practiced for 28 years, and I serve as the Vice President of the Board of MN APTA.

As a physical therapist practitioner and as an Association member, I wish to comment on the July 12 proposed 2008 physician fee schedule rule, and in particular the issue surrounding physician self-referral and the "in-office ancillary services" exception. I support the removal of physical therapy as a designated health service (DHS) permissible under the in-office ancillary exception of the federal physician self-referral laws.

I believe that a conflict of interest exists whenever physicians are permitted to refer to, and profit from physical therapy services in which they have a financial interest. In these arrangements physicians seek income beyond the fee for their own services and enter into arrangements that amount to voluntary, or avoidable, conflicts of interest. These types of arrangements are being marketed to physicians as "passive revenue streams." The physical therapist's services are distinct from the medical services and are not pertinent to the patients visit to the physician.

Since Stark II the number of physician-owned and chiropractic-owned physical therapy practices has rapidly increased in this state. I have personally suffered from physicians who had previously referred patient to my practice, hire physical therapists to work for them. I have lost 30% of my practice and closed one office due to physicians opening their own physical therapy clinic. Again, previous to the physician opening its physical therapy clinic, my services were of acceptable cost effectiveness and quality to those physicians. In essence, one day my services were worthy of a referral, and then the next day they were not.

As a professional association MN APTA opposes allowing one profession to control the marketplace of another profession. We do not believe that patients are well-served when avoidable conflicts of interest exist. Our concern is that physician self-referral is a cost-driver in healthcare and that it can lead to over utilization in the forms of unnecessary referrals, excessive durations or frequencies of treatment, and unnecessary procedures and equipment. We are also concerned about under utilization in the forms of denial or restriction of physical therapy. This has been reported to occur when the therapy might eliminate the need for other high cost services, such as imaging or surgery, from which the physician profits. Finally, MN APTA has concerns over the limited choice that the Medicare beneficiary might have in physical therapists. Beneficiaries have reported that they feel pressured to discontinue the relationships they have with their own physical therapist in order to receive the physical therapy that they need.

Physician self-referral is being defended as allowing physicians a "greater role" in the physical therapy services provided to patients. However the trend in Minnesota has been for physician-owned physical therapy clinics to take advantage of the reassignment of benefits laws to collect payment in order to circumvent the "incident to" requirements. Either way, the physician is controlling demand and access to services and at the same time is profiting from that control.

MN APTA strongly supports any efforts to eliminate abusive financing arrangements under the Stark law that are contrary to the best interest of the Medicare beneficiary. MN ATPA strongly urges the CMS to remove physical therapy as a designated health service (DHS) permissible under the in-office ancillary exception of the federal physician self-referral laws.

Finally, in our state there are other physical therapist-owned practices that have suffered measurable and significant losses in the number of patients who are referred to them, specifically from those physicians who employ their own physical therapists. In a survey of our members done early in 2005, 30% of respondents indicated that their clinics had been adversely affected by physician self-referral. Since then, the number has increased, although we cannot accurately report the severity of the impact.

On behalf on myself and MN ATPA, thank you for your consideration of our comments.

Craig Johnson, PT

Issue Areas/Comments

GENERAL

GENERAL

Dear Sir or Madam:

My name is Corey S. Tremble and I am a certified and licensed athletic trainer at the University of South Florida. I am currently attending graduate school and serve as a graduate assistant here at the university. Upon hearing and reading about this issue, I feel as though it is my duty to comment on this matter.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Corey S. Tremble, ATC, LAT, CSCS

Impact

Impact

The overall patient population is older, and the co-morbidities are increasing in complexity. This extends to the community hospital setting in addition to the tertiary care centers. We give the utmost attention to the depth of care needed for these patients. The responsibility for safely providing anesthesia continues to deepen. Increasing payments for anesthesia services would thus be a small recognition of the efforts put forth for the anesthesia care team.

Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Medicare Telehealth Services

Medicare Telehealth Services

North Carolina Division of Mental Health, Developmental Disabilities, and Substance Abuse Services.

Comment on Proposed Rule Changes to the Physician Payment Schedule.

File Code: CMS-1385-P

Issue Identifier: Medicare Telehealth Services.

The proposed additions to the telehealth services covered by Medicare includes a regulatory impact analysis by CMS. This analysis states the following: 'To date, Medicare expenditures for telehealth services have been extremely low. For instance, in CY 2006, the total Medicare payment amount for telehealth services (including the originating site facility fee) was approximately $2 million. Moreover, previous additions to the list of Medicare telehealth services have not resulted in a significant increase in Medicare program expenditures.'

If the intent of CMS analysis is to provide a rationale to make reductions in Medicare payment for telehealth services in the future, the North Carolina Division of Mental Health, Developmental Disabilities, and Substance Abuse Services (NC DMH/DD/SAS) offers the following comment.

The NC DMH/DD/SAS system has recently begun telepsychiatry pilot projects in ten localities across the state. Our intent is to further expand the provision of telepsychiatry services in the near future. North Carolina has many rural areas to which we are hoping to bring increased availability of mental health, developmental disability, and substance abuse (mh/dd/sa) services via telepsychiatry.

In numerous areas of the state, there are shortages of mh/dd/sa service professionals (e.g., psychiatrists, child psychiatrists, etc.). Telepsychiatry will help ensure that needed mh/dd/sa expertise is accessible in areas that suffer from a lack mh/dd/sa professionals.

We urge CMS to continue to fund a wide variety of telehealth services via Medicare and Medicaid coverage. Thank you for the opportunity to comment on the proposed rules changes.

Coding-- Additional Codes From 5-Year Review

Coding-- Additional Codes From 5-Year Review

Thank you for the opportunity to comment on this important issue. I want to give you my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this concern.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,
Jack Neary MS, CRNA

Issue Areas/Comments

GENERAL

GENERAL

This proposal to eliminate payment for x-ray services which are referred by a chiropractor is outrageous. Chiropractors are licensed in all 50 states. The scope of practice includes taking and reading x-rays. It's bad enought that chiropractors as a profession have historically not been reimbursed for these services that they are licensed to perform. Ths has increased the cost of health care and made it inconvenient for millions of Medicare beneficiaries.
Wake up and smell the coffee. Chiropractic care is effective and cost effective. Requiring a Medicare patient to be referred back to their primary physician and only then to be referred to a diagnostic facility for a simple x-ray is a waste of time, a waste of gasoline and a waste of tax payer dollars. What is the point of Medicare coverage for chiropractic services when Medicare handcuffs the chiropractor from conducting his or her practice in the manner he or she is licensed to do so?

GENERAL

Dear Sir or Madam: I currently am working at a Hospital Outpatient Physical Therapy Clinic where I have been employed for 13 years. Prior to this position I was the Head Athletic Trainer at Northern Illinois University. I have over 20 years experience in providing quality healthcare to an active population of people. I graduated from an approved major in Sports Medicine/Athletic Training, became certified by our National Athletic Trainers Association Board of Certification, and obtained a Masters Degree to improve my skills and knowledge. I am greatly concerned about your potential decisions regarding rehabilitation in hospitals. I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P. While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients. As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards. The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility. Sincerely, Mike Braid, MSEd, ATC

August 20, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

PO Box 8018

Baltimore, Maryland 21244-8018

Re: "TECHNICAL CORRECTIONS"

The proposed rule dated July 12th contained an item under the technical corrections section calling for the current regulation that permits a beneficiary to be reimbursed by Medicare for an X-ray taken by a non-treating provider and used by a Doctor of Chiropractic to determine a subluxation, be eliminated. I am writing in strong opposition to this proposal.

While subluxation does not need to be detected by an X-ray, in some cases the patient clinically will require an X-ray to identify a subluxation or to rule out any "red flags," or to also determine diagnosis and treatment options. X-rays may also be required to help determine the need for further diagnostic testing, i.e. MRI or for a referral to the appropriate specialist.

By limiting a Doctor of Chiropractic from referring for an X-ray study, the costs for patient care will go up significantly due to the necessity of a referral to another provider (orthopedist or rheumatologist, etc.) for duplicative evaluation prior to referral to the radiologist. With fixed incomes and limited resources, seniors may choose to forgo X-rays and thus, needed treatment. If treatment is delayed, illnesses that could be life threatening may not be discovered. Simply put, it is the patient that will suffer as result of this proposal.

I strongly urge you to table this proposal. These X-rays, if needed, are integral to the overall treatment plan of Medicare patients and, again, it is ultimately the patient that will suffer should this proposal become standing regulation.

GENERAL

GENERAL

Dear Sir or Madam:
I am a Certified Athletic Trainer working at a small community hospital in Michigan. I work closely with Doctors, Physical Therapist, and Nursing professionals. I hold a B.S. in Sports Medicine, and am a Nationally Certified Athletic Trainer.

I am writing today to voice my opposition to the standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not recieved the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As a Certified Athletic Trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experence, and national certification exam ensure that my patients recieve quality health care. State law and hospital medical professionals have deemed me quite qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throught the industry. It is irresponsible for CMS, which is suppose to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to recieve those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients recieve the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification,I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilition facility.

Sincerely,

Steven J. Gardner, ATC

Submitter : **Mr. Chad Adams** **Date: 08/30/2007**

GENERAL

GENERAL

BRIEF INTRO ABOUT SELF:
My name is Chad Adams. I work for the North Florida/ South Georgia Veterans Health System in Lake City, Florida as a registered kinsiotherapist and a registered orthopedic technologist. I completed my undergraduate degree in 1993 form Slippery Rock University; currently I am pursuing a Masters of Health Sconce degree at Florida Gulf Coast University.

I am writing today to voice my opposition to the proposed therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and other facilities proposed in Federal Register issue #1385-P. As a Kinesiotherapist, I would be excluded from providing physical medicine and rehabilitation services under these rules.

I am concerned that these proposed rules will create additional lack of access to quality health care for my patients. This is particularly important because my colleagues and I work with many wounded Veterans, an increasing number of whom are expected to receive services in the private market. These Medicare rules will have a detrimental effect on all commercial-pay patients because Medicare dictates much of health care business practices.

I believe these proposed changes to the Hospital Conditions of Participation have not received the proper and usual vetting. CMS has offered no reports as to why these changes are necessary. There have not been any reports that address the serious economic impact on Kinesiotherapists, projected increases in Medicare costs or patient quality, safety or access. What is driving these significant changes? Who is demanding these?

As a Kinesiotherapist, I am qualified to perform physical medicine and rehabilitation services. My education, clinical experience, and registered status insure that my patients receive quality health care. Hospital and other facility medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards and accepted practices.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the health care industry. It is irresponsible for CMS to further restrict PMR services and specialized professionals.

It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to reconsider these proposed rules. Leave medical judgments and staffing decisions to the professionals. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,
Chad A. Adams, RKT

P.O. Box 8018
Baltimore, MD 21244-8018

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to signifieant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Mark N Malinowski, DO

I am writing regarding the proposal to potentially limit the ability of an orthopedic surgeon to have physical therapists working in the surgeon office providing therapy to patients. The physical therapists must work under the direction of a physician. I know that some physical therapists are seeking more independence in this regard, that would be unwise and very costly for the health care system. They do not have adequate training to be independent care providers. Moreover the best care for the patient is went the "team" of the surgeon, therapist and patient are all working in harmony. This requires input and review by the surgeon. Also it is far more convenient for the patient to go to one location and see both the surgeon and the therapist.

CAP Issues

CAP Issues

August 30, 2007

Thank you for the opportunity to submit comments on the Physician Self-Referral Provisions of CMS-1385-P entitled Medicare Program; Proposed Revisions to Payment Policies Under the Physician Fee Schedule for Calendar Year 2008. I am a board-certified pathologist and a member of the College of American Pathologists. I practice in Knoxville, Tennessee as part of a twelve Pathologist group and an independent anatomic pathology lab which covers two large city hospitals, a children s hospital, six small community hospitals, and three surgery centers along with an outpatient pathology service.

I applaud CMS for undertaking this important initiative to end self-referral abuses in the billing and payment for pathology services. I am aware of abusive pathology service arrangements in my practice area that give physician groups (non-pathologists) a share of the revenues from the pathology services ordered and performed for the group s patients. I believe these arrangements are an abuse of the Stark law prohibition against physician self-referrals and I support revisions to close the loopholes that allow physicians to profit from pathology services which will lead to over utilization of services and an increase in medical care costs.

Specifically I support the expansion of the anti-markup rule to purchased pathology interpretations and the exclusion of anatomic pathology from the in-office ancillary services exception to the Stark law. These revisions to the Medicare reassignment rule and physician self-referral provisions are necessary to eliminate financial self-interest in clinical decision-making. I believe that physicians should not be able to profit from the provision of anatomic pathology services unless the physician is capable of personally performing or supervising the service. The original in-office ancillary services exception to the Stark law was never meant or developed to allow the practice of building anatomic pathology labs by urologists, gastroenterologists, dermatologists, or OB-GYN doctor groups; referring all of their office biopsies to the in-office lab; hiring pathologists to sign out the biopsies for below market fees; billing Medicare a marked up global fee (technical and professional); and pocketing a big profit. These arrangements are designed to increase the groups revenues and can lead to over utilization of services. There are several groups of physicians engaged in this practice of forming a loose merger or corporation (joint venture essentially) in order to comply with the in-office ancillary services exception to the Stark law for the sole purpose of building these anatomic lab profit centers. The anatomic lab is built in one of the groups office locations usually near the contracted pathologists offices. This process is occurring now and will proliferate at a very fast rate if CMS doesn t act now to stop this abusive arrangement. I also feel that it is somewhat unethical and may not be totally following the exception guidelines.

Opponents to these proposed changes assert that their captive pathology arrangements enhance patient care. I agree that the Medicare program should ensure that providers furnish care in the best interests of their patients, and , restrictions on physician self-referrals are an imperative program safeguard to ensure that clinical decisions are determined solely on the basis of quality and not solely based on profit. The proposed changes do not impact the availability or delivery of anatomic pathology services and are designed only to remove the financial conflict of interest that compromises the integrity of the Medicare program.

Sincerely,
Gary L. Cooper M.D.
Pathologist

RE: CMS-1385-P (Background, Impact) Anesthtesia Services

Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

" First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
" Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
" Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,

Carol A. Mackin CRNA

Coding--Multiple Procedure
Payment Reduction for Mohs
Surgery

Coding--Multiple Procedure Payment Reduction for Mohs Surgery

August 30, 2007

Mr. Terrence Kay
Director, Division of Practitioner and Ambulatory Care
Centers for Medicare & Medicaid Services
7500 Security Boulevard
Baltimore, MD 21244-1850

RE: Proposed change to payment policy for Mohs micrographic surgery

Dear Mr. Kay:

The Cancer Research and Prevention Foundation (CRPF) is writing today to register concern about the proposed change to the payment policy concerning Mohs micrographic surgery. This planned change would remove Mohs surgery from a longstanding exemption from the multiple surgery reduction rule (MSRR, indicated by CPT modifier -51). CRPF believes that this change could be detrimental to both providers and patients seeking to diagnose and treat skin cancer.

Over a million Americans are diagnosed with skin cancer each year. Mohs surgery is the gold standard among skin cancer treatments for the deadliest forms of the disease. This unique and effective procedure has the highest cure rate for any treatment for skin cancer. Changes in the code could affect the way physicians treat the patients and out of pocket expenses for the patient, forcing each party to make treatment decisions based on cost as opposed to quality of the medical care and procedure.

We urge you to reconsider the proposed changes. Please do not hesitate to contact me with questions.

Sincerely,

Lisa Hughes
Senior Director, Policy and Advocacy

Physician Self-Referral Provisions

Physician Self-Referral Provisions

August 30, 2007
Dear Sir or Madam:
My name is John Cottone, EdD, ATC. I have been a practicing athletic trainer and teacher for 30 years. I am currently the department chair in the Department of Kinesiology at the State University of New York at Cortland. I have been preparing students for the field of athletic training throughout my entire professional career.
I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.
While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.
As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.
The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.
Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.
Sincerely,
John Cottone, EdD, ATC-Chair
Department of Kinesiology
Program Director for Athletic Training

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

This comment is to let you know of my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. That the CMS has recognized the gross undervaluation of anesthesia services is long overdue. I and my Anesthesiologist colleagues are grateful that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, a huge payment disparity for anesthesia care was created, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This is less than the Medicare paymentwhen I went into practice in 1982. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency aceepted this reeommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have aceess to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for considering this topic.

Sincerely,
Thomas M. Warrren, M.D.

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule.

As a Registered Nurse for the past 27 years, I have watched since the beginning of DRGs and I have seen the effects on health care. I do not work in anesthesiology, but even from the outside of that practice field, the huge strides that have been made in improving patient safety, in increased efficiency of practices, and in overall better care of patients are obvious. Yet, compensation for anesthesia services has lagged considerably.

From the beginning, RBRVS created a huge payment disparity for anesthesia care. Anesthesia was significantly undervalued. It should be recognized that most of the new procedures available and the increased ability to improve the health of senior citizens through surgical procedures (that would not have even been considered on the elderly 20 years ago) have been dependent upon vastly improved anesthesia services. Yet payment remains at a low enough level that on complex cases anesthesiology departments can LOSE MONEY saving the lives of the elderly!

Medicare payment for anesthesia services now sits at LESS than what I pay my mechanic to work on my car. (Note: the mechanic has the benefit of working on my car while it is turned OFF. Anesthesiologists must "keep the car running" during surgical procedures, and often on extremely frail elderly.) The amount paid does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

The CMS needs to increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would serve as a major step forward in correcting the long-standing undervaluation of anesthesia services.

I support full implementation of the RUC s recommendation to increase unit valuation of anesthesia care.

To ensure that the practice of anesthesia be available to all senior citizens, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Technical Corrections

Technical Corrections

MEI-------RE:CMS Proposes Changes to Chiropractic X-Ray Reimbursement
I am ABSOLUTELY opposed, as are many patients that I have discussed this issue with, i.e. eliminating the current regulation that permits a beneficiary to be reimbursed by Medicare for an X-ray taken by a non-treating provider and used by a D.C. to determine a subluxation.
This proposed change hurts ALL Chiropractic PATIENTS & DOCTORS.
It is BAD enough that I have slaved for over 20 years without a penny EVER of reimbursement for ANY and EVERY X-ray I have taken ...literally many thousands ...and I have discounted every one at my OWN expense to help the defenseless ELDERLY! AT least show some RESPECT and DECENCY for the many millions of ELDERLY patients,if not for the many thousands of Chiropractic doctors.
I strongly urge you to TABLE this proposal !!!

This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

My Name is Jumpei Harada, currently serving as an assistant athletic trainer at Columbia University.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of aceess to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of acccss and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Jumpei Harada, MS, ATC

RE: CMS 1385 P (BACKGROUND, IMPACT)
ANESTHESIA SERVICES

Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Physician referal to self-owned Physical therapy practice is clearly conflict of interest. The argument that the PT is unable to assess and treat without the direct intervention of the MD demeans and undermines the value of PT as a whole and is blatently untrue. In private non-physician owned practice we are driven by the successful patient outcome. We are able to draw from a wide spectrum of interventions not limited to those that the physician may be aware of. As a practitioner I accept the responsibility inherent to my position to evaluate symptomology and report back to the referring MD, or in the case of self-referral,advise an MD of record if the symptoms fall outside the scope of my practice. I personally have intervened on numerous occasions when medical diagnosis did not match symptoms, recommending alternatives directly to the MD which in turn have impacted the patients care directly , and in more than one occasion saving a life. If the MD directly paid my salary, I may have chosen differenly, being wary of insulting him or other repercussions to my position.Clearly not all MDs would be aggrevated, but, when egos are involved anything can happen.The patients are served best by an open market system that requires we treat them well and with their best interests in mind, not by the thought that the doctor knows best about therapy. Poll the graduating classes of MDs regarding their eduеation in rehab.It is minimal at best. PTs specialize in rehabilitation and should be respected as the professionals we are. We respect the MDs for their knowledge, but our ability to provide private practice options for the patients is being crushed by MDs seeing dollar signs in owning their own practice and referring strictly to their clinics, often telling patients that they will not treat them if they don't see their own therapy or that other therapists not under their direct supervision "will likely hurt them".

I ask that Physician owned private Physical Therapy practice be seen for what it is, a conflict of interest which is really just another way for Doctors to generate incomc,not to provide the best of services to their patients.As the reimbursments in other areas decline, they continue to search for income options, driving the rest of us out of business.

National Athletic
Trainers' Association

August 29, 2007

Dear Sir or Madam:

My name is William Elmblad and I am a Certified Athletic Trainer (ATC) employed at Marquette General Health Systems, located in Marquette, Michigan. MGHS is the only Level II trauma center in the Upper Peninsula of Michigan. I have 15 years of allied health clinical experience at MGHS. I have a Bachelors degree in Physical and Health Education from Saginaw Valley State University and been certified as an Athletic Trainer since 1992.

I currently continue to work at MGHS in the outpatient physical therapy department providing physical rehabilitation to a variety of patients with musculoskeletal dysfunctions and injuries. Along with direct patient care I also provide Athletic Training services to an area high school. Also, MGHS provides Athletic Training services to many youth athletic venues in Marquette and the surrounding area.

My profession allows me to work with a variety of other allied health care providers such as: physicians, physician assistants, physical therapy, occupational therapist, exercise physiologist, and nurses. I approach my role as an allied health care provider with great compassion and dedication to my patients and to my profession I serve. However, I'm concern that my ability to provide this care that improves the livelihood of many individuals, may be in jeopardy.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provision for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

William Elmblad, ATC

Re: CMS 1385-P: 2008 Medicare Fee Schedule – 2. PE Proposals for CY 2008
b. RUC Recommendations for Direct PE Inputs and Other PE Input Issues
(x) Supply and Equipment Items Needing Specialty Input,

Dear Acting Administrator Kuhn:
On behalf of the members of the American Academy of Dermatology (AAD) we are submitting comment to you on the 2008 Medicare Fee Schedule: Proposed Rule regarding the explicit request for information on Tables 5 Supply Items Needing Specialty Input and 6 Equipment Items Needing Specialty Input.

CPT 36522 Extracorporeal Photopheresis
Please be advised that the Academy responded to the CMS request for data related to CPT 36522 Extracorporeal Photopheresis listed in the 2007 Medicare Fee Schedule: Proposed Rule. However, we are providing updated information as requested.

Table 5 Supply Items Needing Specialty Input

SC088 Fistula set, dialysis, 17 g
This is not a supply item used in photopheresis procedures. The supply item that should be listed instead is **"fistula needle, dialysis, 17g"** (quantity used = 2 per procedure). However, there does not seem to be a supply item currently in the CMS Medical Supply database with a description that approximates this specialized needle, (which is also used routinely in chronic renal dialysis procedures).

Fistula needle, dialysis, 17g"
The price at which 17g fistula needles are widely available for physician office-based providers is approximately **$1.62** per needle (x 2 = $3.24). This price was secured from Baxter Healthcare, whose price list for large quantity price for 250 twin packs or 500 single needles is $810.00. That price list as provided by the manufacturer is attached (See Baxter-Fistula needle_17g_ID & Pricing_08 23 07 MS Excel file attached).

Additional Extracorporeal Photopheresis Supplies clarification:

SA024 Kit, photopheresis procedure:
The current average kit ASP price is **$976.39**,
not $858. This value was calculated and supplied by Therakos, which is the sole manufacturer of the device. A contact at Therakos to confirm this information is Monica Martyak.

SJ075 Methoxsalen, 10ml vial:
The current ASP price is **$59.48**, not $49.50. Again this information supplied by the manufacturer Therakos.

Table 6 Equipment Items Needing Specialty Input
CPT 36522 Extracorporeal Photopheresis

EQ206 **Plasma pheresis machine w/UV light source**
This device has been improperly identified. It does *not* include a "UV light source." The machine is also very distinct in design and important functional features from a conventional device used to perform plasma pheresis procedures. We recommend that this item be re-designated as a **"plasma pheresis machine, photopheresis."**

Photopheresis light assembly
This is a separate piece of equipment that has an Average Selling Price (ASP) **of** $1,616.65.
The **Photopheresis light assembly** including the UV bulbs has an average useful life of 187 procedures (cost per procedure = $8.65). This information is supplied by Therakos.

Note: As with UV-A and UV-B bulb replacement costs for photo chemotherapy (CPT 96910-96912-96913) the cost of light source replacement exceeds the usual parameters for medical supplies and needs to be factored into the medical equipment cost on an ongoing basis.

CPT 96904 Whole body photography

Camera mount, floor
Cross slide attachment
These are listed as products of Manfrotto which is a Registered Trademark of Bogen Photo Corporation with additional information available from http://www.bogenimaging.us/jsp/index.jsp

Dermoscopy attachments (CPT 96904)
The current market for digital Dermoscopy includes two varieties of relatively simple and cheap attachments which can convert a consumer digital camera into a digital dermoscope. A coupling adapter acts as a fastener between the camera and an ordinary dermoscope, whereas a dermoscopy attachment includes the dermoscope optics and light source and can be attached directly to the camera. Other options for digital dermoscopy include complete dermoscopy systems that use a hand-held video camera linked directly to a computer. These systems differ from each other in whether or not they are calibrated as well as the quality of the camera and software interface.

Pricing information on dermoscopy attachments is available from **3Gen, LLC**
31521 Rancho Viejo Road, Suite 104 • San Juan Capistrano, CA 92675 email: info@3GenLLC.com • www.3GenLLC.com Tel 949.481.6384

Camera Lens, macro, 35-70mm (CPT 96904)
Standard camera equipment manufactured by Canon, Contax, Nikon, Sony, etc. with price ranging from $50 (used) to $250-$600 (new)

Dermal imaging software (CPT 96904)
Canfield Scientific is recognized as primary source of this type of software. Attached is pricing information on Mirror Body Mapping software designed to assist in location and monitoring of lesions. (See attached 082907 Dermal Imaging Software pricing.pdf)

We hope the information supplied is helpful. If you have any questions regarding these items and the related information, please feel free to contact: Norma L. Border at nborder@aad.org or 847 240 1814.

Best regards,

Brett Coldiron MD

Brett Coldiron, M.D. Chair

GENERAL

GENERAL

Dear Sir or Madam:

My name is Douglas Wardy, and I am a certified athletic trainer with the University of South Florida football team. I am currently pursuing my master's degree while working as a graduate assistant with the team.
I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

Whilc I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that thesc proposcd rules will create additional lack of access to quality health care for my patients.

As an athlctic traincr, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical cxperiencc, and national certification exam ensure that my patients receive quality hcalth care. State law and hospital medical professionals have deemed mc qualified to perform these services and these proposed regulations attempt to circumvent those standards.

Thc lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, espccially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilitics arc pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS scems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the rccommendations of those professionals that are tasked with overseeing the day-to-day health carc needs of their patients. I respectfully request that you withdraw thc proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Douglas Wardy, ATC/LAT

Physician Self-Referral Provisions

Physician Self-Referral Provisions

I am a physical therapist in Redmond, Washington and wanted to voice my opposition to physician owned physical therapy clinics. The CMS should remove physical therapy from the in-office ancillary services exception to the federal physician self-referral laws.

I believe that it is in the best interest of the patient to not have a referral for profit by their attending physician. As a physical therapist I have seen the referral of post-op patients significantly decrease to independent PT practices and are almost exclusively referred to the physician owned clinic.

By eliminating physical therapy as a designated health service (DHS) furnished under the in-office ancillary services exception, CMS would reduce a significant amount of programmatic abuse, overutlization of physical therapy services under the Medicare program, and enhance the quality of patient care.

Sincerely

Joe Banach, DPT,CSCS

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Re: TECHNICAL CORRECTIONS

The proposed rule dated July 12th contained an item under the technical corrections section calling for the current regulation that permits a beneficiary to be reimbursed by Medicare for an X-ray taken by a non-treating provider and used by a Doctor of Chiropractic to determine a subluxation, be eliminated. I am writing in strong opposition to this proposal.

While subluxation does not need to be detected by an X-ray, in some cases the patient clinically will require an X-ray to identify a subluxation or to rule out any "red flags," or to also determine diagnosis and treatment options. X-rays may also be required to help determine the need for further diagnostic testing, i.e. MRI or for a referral to the appropriate specialist.

By limiting a Doctor of Chiropractic from referring for an X-ray study, the costs for patient care will go up significantly due to the neeessity of a referral to another provider (orthopedist or rheumatologist, etc.) for duplicative evaluation prior to referral to the radiologist. With fixed incomes and limited resources seniors may ehoose to forgo X-rays and thus needed treatment. If treatment is delayed illnesses that could be life threatening may not be discovered. Simply put, it is the patient that will suffer as result of this proposal.

I strongly urge you to table this proposal. These X-rays, if needed, are integral to the overall treatment plan of Medicare patients and, again, it is ultimately the patient that will suffer should this proposal beeome standing regulation.

Sincerely,

michael bishop, d.c.

Re: Proposed Revisions to Payment Policies Under the Physician Fee Schedule, and Other Part B Payment Policies for CY 2008; Proposed Revisions to the Payment Policies for Ambulance Services Under the Ambulance Fee Schedule for CY 2008; and the Proposed Elimination of the E-Prescribing Exemption for Computer-Generated Facsimile Transmissions (CMS-1385-P)

Dear Mr. Kuhn:
Cytyc Corporation appreciates the opportunity to comment on the Centers for Medicare & Medicaid Services' ("CMS") Medicare Physician Fee Schedule proposed rule for fiscal year 2008, published in the Federal Register on July 12, 2007 (CMS-1385-P, Federal Register, Vol. 72, No. 133).

Cytyc Corporation, a medical device company, provides therapeutic and screening technologies for multiple areas of health and is particularly focused in women's health. In the area of therapeutics, Cytyc manufactures the MammoSite Radiation Therapy System (RTS) the most widely used method of breast brachytherapy to treat breast cancer. Additionally, Cytyc manufactures the ThinPrep Pap Test, the most widely used cervical cancer screening test. As an industry leader in women's health, Cytyc is focused on ensuring that issues impacting women's health and certain cancer therapies and diagnostics are given appropriate consideration in the formation of federal health care and reimbursement policy.

2008 Update of the Conversion Factor and the Sustainable Growth Rate
The proposed rule indicates that payment rates for physicians' services will be reduced by 9.9% for 2008. Such a drastic reduction will impact continued provider participation in the Medicare program. At a time where the number of Medicare beneficiaries is growing substantially, access to providers and services is crucial. We acknowledge annual review of the conversion factor according to the sustainable growth rate (SGR) formula is required by law. Nonetheless, CMS must recognize that the reductions under the SGR system forecasted for 2008 and subsequent years will limit provider participation. Cytyc does not support the proposed 9.9% reduction and recommends that CMS replace the Sustainable Growth Rate in 2008 with an alternate annual update system that more accurately reflect actual increases in physician practice costs.

Clinical Laboratory Issues
Cytyc offers diagnostic testing for cervical cancer with the ThinPrep test which has been shown to increase the detection of pre-cancerous cells, and Cellient™ Automated Cell Block System which can aid the pathologist with more diagnostically useful cell blocks. Payment for many of the diagnostic tests for cervical cancer is made under the clinical laboratory fee schedule.

CMS proposes a new reconsideration process relating to the basis for and the amount of payment for any new clinical laboratory test for which a new or substantially revised HCPCS code is assigned on or after January 1, 2008. We commend CMS for proposing a reconsideration process for use in future new lab test payment determinations. The reconsideration process as describe would allow the necessary dialogue to ensure adequate pricing is set for new tests. Cytyc urges CMS to establish payment amounts at the national limitation amount (NLA) of the new tests on the Clinical Laboratory Fee Schedule to which the new tests are cross-walked. The NLA should replace carrier-specific amounts below the NLA for new tests. Carrier specific low rates would inhibit patient access.

Resource-Based Practice Expense Issues
First, with regards to the treatment of breast cancer, we wish to express our concerns about CMS's proposed changes in RVUs and the potential impact of significant reductions in practice expense values on access to cancer care. Under the new practice expense methodology, two (2) breast brachytherapy and two (2) HDR brachytherapy codes are slated to be significantly reduced over the four-year transition period. CPT codes 77781 and 77782 are the primary procedures reported for ovarian, breast and cervical cancer treatments. The proposed reductions in reimbursement may influence treatment decisions.

Breast brachytherapy, or partial breast irradiation, is a viable treatment option for many women receiving a lumpectomy. The most common brachytherapy method utilizes a balloon catheter and High Dose Radiation (HDR). CPT codes 19296 and 19297 are used for the placement of the balloon catheter in conjunction with HDR brachytherapy codes 77781 & 77782. Decreasing the length of a course of radiation therapy improves the quality of life for these women. Currently 20% of women with breast cancer are foregoing radiation therapy. Partial breast irradiation provides an opportunity for some women to receive radiation who may otherwise not be able to endure 7 weeks of whole beam radiation. By implementing the proposed payment changes, this rate may continue to increase.

Second, Cytyc supports the recommendations submitted by the Coalition of Advanced Brachytherapy in this area.

Third, Cytyc supports the CMS decision not to revise the 50% equipment usage assumption until adequate data has been collected on equipment costs.

Quality Indicators
Cytyc wishes to acknowledge CMS efforts to implement the PQRI and to thank CMS staff for providing a clear description of the process included in the Proposed Rule. Cytyc would request CMS include providers, device manufacturers and patient groups in the continued development of PQRI. Additionally, Cytyc would request CMS include an indicator for radiation therapy following breast conservation surgery as included in the inpatient quality indicators.

Data from multiple large randomized trials have demonstrated the addition of radiation after breast conserving surgery in patients with invasive breast cancer lowers the risk of local recurrence. Therefore, we commend CMS for including PQRI Measure #74 'Radiation Therapy Recommended for Invasive Breast Cancer Patients Who Have Undergone Breast Conserving Surgery' under the PWRI program in 2007 and for proposing to continue it in 2008. We also commend CMS for proposing to include a screening mammography quality measure in 2008 from the AQA starter-set measures. As a manufacturer that provides technology for women faced with breast cancer, we believe including these quality indicators will help to ensure all Medicare beneficiaries with breast cancer are evaluated and offered the most appropriate technology. We request that CMS allow manufacturers of advanced therapies involved in the treatment of breast cancer to be involved in the development of the quality measures.

Recommendations
Cytyc respectfully requests that CMS consider an implement the following recommendations:

- ◊ Make final the proposed new reconsideration process relating to the basis for and the amount of payment for any new clinical diagnostic laboratory test
- ◊ Base payment for new tests included in the Clinical Laboratory Fee Schedule on the National Limitation Amount, replacing local carrier rates to avoid disparity in rates which may have an impact on patient access.
- ◊ Reconsider reductions in the proposed practice expense relative value units (RVUs) specific to 19296, 19297, 77781 and 77782. These proposed reduction combined with the forecasted reductions in the annual update factor will have an adverse impact on Medicare beneficiaries' access to proven treatment advanced technologies for the treatment of breast cancer.
- ◊ Work with the Congress, physicians and manufacturers on an alternate annual update system to replace the SGR system.

Cytyc supports the specific recommendations included in the ADVAMED and CAB comment letters.

Cytyc appreciates the opportunity to provide comments during this proposed rule period. Should you have any questions or need additional information, please do not hesitate to contact me at 508-263-8961 or via email at ann.dawidczyk@cytyc.com.

Sincerely,

Ann Marie Dawidczyk

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Issue Areas/Comments

Background

Background

Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to cnsure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increasc in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average I2-unit anesthesia service in 2008 will be rcimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Issue Areas/Comments

Background

Background

in the early 1990's, i met local represents, reviewed and documented the mohs/surgery relationship; how and why it was disctinct, resulting in the 1991 decision. nothing has changed. the patient returned to the operating room, repeat vitals, preparation, anesthesia, new instruments etc. it is not like an excsion, where the patient is lying on the table, the closure following immediately following the excision. the waiting period is 0; mohs was always intended as a stand alone. in fact, under the proposed quidelines, if a complex repair is done, the first layer would be reduced by 1/2, less than the free standing second layer. this makes no sense;the mohs resection is not connected to the closure.

i saw the restricted access and aborations in the care of patients to skin cancer 20 years ago. i have also seen the improved care, easy access to a needed procedure, a less frequently diaster due to better cures and after 20k cases personally, a great safety record in mostly elderly patients.

these regulations will kill the best approach to the most common cancer. it is safe, highly effective, efficient, cost effective. The changes are a unprovoked attack on a 20 year agreement. I am glad i am approaching retirement, but it fear for the patients and my trainees will look to cosmetics rather than what is needed.

thank you,

Raymond G. Dufresne, Jr.,M.D.
Professor, Department of Dermatology, Brown
Director Dermatologic Surgery
Fellowship Director, American College Mohs Surgery

Issue Areas/Comments

GENERAL

GENERAL

Dear Sir or Madam:

My name is Cathleen Brown, PhD, ATC. I am a certified athletic trainer and teach in the undergraduate athletic training program at the University of Georgia.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients and my students who treat patients after graduation.

As an athletic trainer, I am qualified to teach and perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The majority of my students are from Georgia, and most are from rural areas. They plan to return to their hometowns following graduation and provide treatment to the people who live there. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,
Cathleen Brown, PhD, ATC

I received my masters degree in sports medicine from IU and am currently nearing completetion of a doctoral degree in higher education adminstration. I am certified by the National Athletic Trainers Association Board of Certification and licenced in the state of Indiana.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.
While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.
As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.
The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.
Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.
Sincerely,
Robert E. Black, MS, ATC, LAT

Background

Background

August 20, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,

Neil L Thompson, CRNA

Department of Health and Human Services
Attention: CMS-1385-P
P.O. Box 8015
Baltimore, MD 21244-8015

RE: Proposed 2008 Physician Fee Schedule
File Code CMS-1385-P

To Whom It May Concern:

The purpose of this letter is to comment on CMS' July 2nd 2008 Medicare Physician Fee Schedule Proposed Regulations that, among other topics, address IDTF Performance Standards, Purchased Test Provisions and Reassignment Rules.

Insight Imaging, LLC provides a diagnostic ultrasound service in five (5) states in the Southeast. Insight Imaging is owned by businessmen and has no physician owners. The Company's service is provided with technologically advanced equipment and highly qualified and experienced technologists in many areas where the quality of diagnostic services is inferior and/or access is limited. Unlike CT, PET and MRI imaging technologies, ultrasound is a much lower cost, portable technology that may be effectively and efficiently offered in the physician practice suite and supervised by the treating / ordering physician.

In-office ultrasound suppliers like Insight Imaging provide services in physician practices, many of which are located in rural, non-metropolitan areas in which the quality and convenience of diagnostic ultrasound is not available or limited.

Insight Imaging provides ultrasound service in the physician's practice facility under the direction, control and supervision of the on-site physician and physician staff. For Medicare beneficiaries, the convenience of on-site service is very important in determining whether the patient ultimately receives the ultrasound imaging study. In certain markets, alternative service outlets (e.g. hospital outpatient imaging departments and fixed imaging centers) may entail drives beyond a twenty (20) mile radius for patient treatment. In other markets, service delays of 10-14 days for the scheduling of an exam are not uncommon. These lengthy drive times and scheduling delays do not exist with on-site, imaging services.

We appreciate the opportunity to provide commentary on the following rules as proposed by CMS:

1901 Roxborough Road, Suite 200 • Charlotte, North Carolina 28211 • 704.525.7005 • Fax 704.525.6250 • insightimagingllc.com

I. IDTF Performance Standards

A. Liability Insurance – § 410.33(g)(6)

The liability insurance requirement made effective January 1, 2007 is a positive standard that raises the quality bar for all IDTFs. We support CMS' proposals to: i) delete the requirement that the liability policy list the serial numbers of all diagnostic equipment as this will increase administrative burden on IDTFs and MACs, and (ii) clarify that the liability policy must provide coverage at each location of at least $300,000 "per incident". We recommend that liability policy details be reflected in the 855B Medicare Enrollment Application and that material changes to this policy would require notification to the MAC according to the same thirty (30) day notice period as that required for changes in ownerships, location, general supervision, and adverse legal actions rather than adopting the requirement for the MAC to be a named certificate holder. We expect that insurance underwriters will be reluctant to add MACs as certificate holders as it may raise questions regarding government indemnification or payment rights that are not warranted.

B. Enrollment Changes – § 410.33(g)(2)

We agree with CMS' proposal to require that changes in ownership, changes of location, changes in general supervision, and adverse legal actions must be reported to the designated fee-for-service contractor on the Medicare enrollment application within thirty (30) calendar days of the change and that all other changes to the enrollment application must be reported within ninety (90) days.

C. Beneficiary Questions & Complaints – § 410.33(g)(8)

We do not agree with CMS' proposal to expand performance standard # 8 to require not only that the IDTF answer beneficiaries' questions and respond to their complaints but that the IDTF create and maintain on file at the physical site of the IDTF (or home office for mobile units) documentation of these interactions with beneficiaries. This documentation provision will place additional administrative and enforcement burdens on IDTFs and MACs, respectively, which will likely decrease the services available to program beneficiaries by the IDTFs.

D. Supervising Physician - § 410.33(b)(1)

We agree with CMS' proposal to delete the existing, very broad requirement that the supervising physician is responsible for "the overall administration and operation of the IDTFs... and for assuring compliance with applicable regulations." We believe that the supervising physician should be responsible for quality-related oversight where he/she is more capable of positively impacting the operation of the IDTF.

§ 410.33(b) Supervising physician. We recommend that CMS move to a diagnostic equipment threshold limit instead of an IDTF site limit since, as proposed – "Each supervising physician must be limited to providing supervision to no more than three IDTF sites." -- portable/mobile providers would be unfairly treated relative to fixed

based operators. The language as written seems to provide a maximum threshold of three (3) portable/mobile ultrasound units operating under one supervising physician. It is unclear how many ultrasound units would be allowed to operate under the three (3) fixed IDTF sites as the maximum number of units at each facility is unspecified by CMS in the proposed rules. Supervision restrictions should be based upon patient volume, which is more closely related to the volume of equipment involved as opposed to the number of IDTF sites. An ultrasound unit threshold per supervising physician would be more precise and prevent any unnecessary disparity in the treatment between portable/mobile and fixed IDTFs. A maximum ultrasound unit threshold of fifteen (15) per supervising physician would be advisable. It may also be necessary to state more clearly in this section that CMS intends this threshold limit to apply to "general" supervision and not "direct" or "personal" supervision.

E. Enrollment Date – § 410.33(i)

We recommend that CMS provide for an effective date that is retroactive for a period of time no greater than sixty (60) days to limit Medicare's exposure to long periods of time between billable activity and enrollment and to provide adequate time for the IDTF to complete the necessary paperwork. Practically speaking, the IDTF must meet all of the requirements of the Medicare Program for providing service (purchase of equipment, employment of technologist, staffing of supervising physician, etc.) before providing the first exam. Once this requirement is met, adequate time is required to accurately and fully complete the 855B. If the IDTF were unable to provide exams and bill for these during this period, the IDTF would be detrimentally impacted financially by incurring expenses to meet requirements of the Medicare Program without potential Medicare revenue. Limiting the retroactive date to sixty (60) days would seem to protect the Medicare program and provide for an ample amount of time for the IDTF to complete the full 855B. An unintended consequence of CMS' proposed rule will be an increase in hurriedly submitted enrollment applications and a resulting increase in administrative burden on MACs due to the processing costs of incomplete enrollment applications. This rule should also account for enrollment delays due to MAC processing delays that are not the fault of the enrollee.

F. Prohibition on Sharing – § 410.33(g)(15)

We understand that CMS is concerned about the sharing of space between fixed IDTF providers and other physician providers. Our experience as a portable IDTF provider does not lend us any specific knowledge to provide thoughtful commentary on this prohibition of sharing as it relates to fixed IDTFs.

We do, however, believe that CMS needs to clarify whether it is drawing a distinction between "mobile" and "portable" providers of service in its solicitation of commentary on a broader application of this "prohibition on sharing" in future CMS rule-making. It is our understanding from form 855B that a mobile provider of service actually performs the diagnostic service within a mobile trailer or transportable unit, and that a portable provider of service actually transports its diagnostic equipment into the physicians practice to provide service. Recognizing this particular distinction, Insight is a portable provider of service and, by

definition, must share space, equipment and staff with the physician provider in order to perform exams. Therefore, we request that portable IDTF providers be excluded from this prohibition of sharing as the inability of portable providers to share space, equipment and staff of a physician provider during the episodes of service to the practice would prevent entirely the provision of portable IDTF service, the most cost effective and convenient delivery method for imaging procedures for patients and the Medicare Program. Therefore, we recommend that portable IDTF providers be excluded from future rulemaking along these lines. Also the prohibition on sharing staff cannot be extended to the supervising physician, as that party will likely never be a full-time employee of the IDTF, and will likely always be employed by his or her own physician practice.

II. Anti-Markup Provisions

A. § 414.50 Purchased Diagnostic Test Rule

To provide some perspective of our Company's service, Insight makes use of vans that transport ultrasound technology and technologists to the office of each primary care physician practice (PCP). In a typical situation, each PCP enters into a one (1) year written agreement with Insight to lease ultrasound technology and a technologist one day each week (or some other predetermined block of time of no less than four (4) hours) for use at the PCP primary practice location. The PCP pays a set daily charge for the equipment and technologist that does not vary with referrals. The PCP supervises the technologist and includes him on its medical malpractice policy. The PCP bills Medicare for the TC. The PC is referred to an outside radiologist who bills and collects for the PC.

A simple reading of proposed regulation section 414.50 would seem to imply that in any diagnostic test billed by a physician, the PDT anti-markup billing rules apply if only one condition exists; i.e., the PC or TC is performed by an "outside supplier". An outside supplier is defined as "someone other than a full-time employee of the billing physician or medical group." Under the Insight facts, it would appear that the leased ultrasound technologist could fit the definition of "outside supplier" since the PCP would not be a full-time employer of the technologist.

We have had conversations with CMS (and have consulted with others who have as well) and have been told that Section 414.50 was not intended to apply to Insight or arrangements like the above because there is no purchased test under our facts. We understand that this conclusion was reached because Section 414.50 was intended to address situations like abusive path labs where physicians had a separate "centralized building" off-site from their traditional professional practice where they exclusively provided path lab services with part-time employees. The off-site path lab service was not integrated into the PCP practice and provided no access or other benefits to patients of the PCP traditional practice. Our ultrasound services are provided directly in the PCP primary office where the PCP provides its traditional professional services. The service is also integrated into the PCP practice as it provides accessible and convenient care for the benefit of PCP patients. The PCP has capital risk for the ultrasound technology (its lease payments to Insight are set in advance for set periodic block time visits that do not vary with the

volume or value of referrals) and has liability risk for the technologist. In other words, the PCP is clearly performing the test and not purchasing the test.

We recommend that the language of Section 414.50 exclude from the proposed regulation services that are performed by the PCP as outlined above, even if the technologist is not a full-time employee of the PCP. This clarification may also be accomplished by CMS language indicating that Section 414.50 only applies when the diagnostic service is provided in a centralized building outside of the physician's primary office site where he provides his professional services.

A failure to clarify the language of this proposed regulation to allow for the service as provided by Insight Imaging would have a detrimental impact on patients, physicians and the Medicare Program in the form of: 1) reduced access to lower cost, diagnostic imaging especially for elderly patients and patients in rural areas; 2) increased utilization of higher tech, higher cost fixed-based imaging modalities; 3) reduced quality of imaging where physicians choose to purchase equipment and provide service on their own and are not subject to IDTF standards; and 4) increased potential for greater utilization of imaging where physicians choose to purchase equipment and provide service on their own and where the incentive to cover these larger fixed costs is greater.

B. 42 C.F.R. § 424.80 (d) -Reassignment to an entity under an employer-employee relationship or under a contractual arrangement

We do not believe that we need to address the proposed language of Section 424.80 since it only applies to reassignments of either the Technical Component or Professional Component, as we do not have reassignments in our proposed facts. However, if the proposed regulation revised definition of "entity" ultimately allows global billing of the Professional Component and Technical Component by the PCP for off-site interpretations, then it would seem that the same clarifying language suggested for Section 414.50 -- "...only applies when the diagnostic service is provided in a centralized building outside of the physician's primary office site where he provides his professional services." -- would also be required for Section 424.80.

C. Elimination of Stark "On-Site" Interpretation Requirement

We support CMS' proposed rules changing the definition of "entity" that effectively exempt the purchased or reassigned interpretation from the on-premises requirements of the Stark in-office ancillary services exception. We believe that the addition of the Anti-Markup provisions to the Professional Component are an effective way to prevent any potential program abuse and improves the administration of the billing of reads to allow more efficiency in the provision of service for the provider (no movement of demographic information between physicians), for the patient (one bill), and for the Medicare program (efficiencies resulting from processing a single global bill).

Conclusion – General Comments on Value of Diagnostic Ultrasound

Diagnostic ultrasound is a clinically effective, low cost, low tech imaging modality. High tech imaging which includes CT, MRI, PET and nuclear imaging is on average three (3) times as expensive as ultrasound. Regulations, proposed or otherwise, that limit providers from offering this low cost modality to physicians inherently leads to the use of higher tech/higher cost imaging modalities offered by hospitals or other fixed providers. By way of one example, Insight serves a small rural hospital an hour's drive from Nashville, TN. If it were not for the ultrasound service that Insight offers in this area, the hospital's only imaging alternative was CT, a higher cost modality. There are numerous examples of the value of ultrasound as a cost effective substitute or alternative imaging tool to other higher cost modalities which greatly benefits patients, providers and CMS.

Private commercial insurance companies have begun to institute pre-qualification/pre-verification standards to control the growth in the use of imaging technologies. In most all of the instances currently present in the marketplace, these standards have been directed at high tech imaging. Low tech imaging, and more specifically diagnostic ultrasound, has been excluded from these new rules because the modality is significantly less expensive and offers physicians a first alternative to diagnose pathology that is much more cost effective. We believe that CMS should give serious consideration to avoiding any future rulemaking that would limit physician and patient access to these low tech imaging modalities and would result in greater cost to the Medicare program.

We hope that CMS finds the above commentary to the July 2nd Proposed Regulations helpful and informative. We appreciate the opportunity to comment to insure that the Medicare Program delivers the maximum amount of clinical and financial value to all stakeholders -- patients, providers, physicians, CMS and taxpayers.

Sincerely,

INSIGHT IMAGING, LLC

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to cxpress my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To cnsurc that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Coding-- Additional Codes From 5-Year Review

Coding-- Additional Codes From 5-Year Review

RE: CMS 1385 P; Proposed Physician Fee Schedule and other Part B Payment Policies for CY2008.
Coding additional codes from 5-year review

Dear Mr. Kuhn:

As a physician who provides echocardiography services to Medicare patients and others in the mid Michigan area, I am writing to object to CMS s proposal to bundle Medicare payment for color flow Doppler (CPT Code 93325) into all echocardiography base services. This proposal would discontinue separate Medicare payment for color flow Doppler effective on January 1, 2008, on the grounds that color flow Doppler has become intrinsic to the performance of all echocardiography procedures.

In conjunction with two-dimensional echocardiography, color Doppler typically is used for identifying cardiac malfunction (such as valvular regurgitation and intracardiac shunting), and for quantitating the severity of these lesions. In particular, color Doppler information is critical to the decisionmaking process in patients with suspicion of heart valve disease and appropriate selection of patients for valve surgery or medical management. In addition, color flow Doppler is important in the accurate diagnosis of many other cardiac conditions.

CMS s proposal to bundle (and thereby eliminate payment for) color flow Doppler completely ignores the practice expenses and physician work involved in performance and interpretation of these studies. While color flow Doppler can be performed concurrently or in concert with the imaging component of echocardiographic studies, the performance of color flow Doppler increases the sonographer time and equipment time that are required for a study; in fact, the physician and sonographer time and resources involved have, if anything, increased, as color flow Doppler s role in the evaluation of valve disease and other conditions has become more complex. The sonographer and equipment time and the associated overhead required for the performance of color flow Doppler are not included in the relative value units for any other echocardiography base procedure. Thus, with the stroke of a pen, the CMS proposal simply eliminates Medicare payment for a service that (as CMS itself acknowledges) is important for accurate diagnosis and that is not reimbursed under any other CPT code.

Moreover, CMS is incorrect in assuming that color flow Doppler is intrinsic to the provision of all echocardiography procedures. I understand that data gathered by an independent consultant and submitted by the American College of Cardiology and the American Society of Echocardiography confirm that color flow Doppler is routinely performed in conjunction with CPT code 93307. However, these data, which were previously submitted to CMS, also indicate that an estimated 400,000 color flow Doppler claims each year are provided in conjunction with 10 echocardiography imaging codes other than CPT Code 93307, including fetal echo, transesophageal echo, congenital echo and stress echo. For many of these echocardiography base codes, the proportion of claims that include Doppler color flow approximates or is less than 50%. More recent data submitted by the ASE in response to the Proposed Rule confirms that this practice pattern has not changed over the past several years.

For these reasons, I urge you to refrain from finalizing the proposed bundling of color flow Doppler into other echocardiography procedures, and to work closely with the American Society of Echocardiography to address this issue in a manner that takes into account the very real resources involved in the provision of this important service.

Sincerely yours,

Michael J. James, DO

RE: **Physician Self-Referral Issues**.

I am a physical therapist in private practice in NJ. I, as a physical therapist, own my own physical therapy clinic. However, I must compete (unfairly) with physician-owned physical therapy clinics. Physician-ownership of physical therapy allows the physicians to refer for profit.

Good medical practice and good business practices are not the same thing. The number one reason physician's own physical therapy clinics is to increase revenue. Under physician ownership, there is tremendous incentive for physicians to abuse Physical Therapy services. This is bad for patients and costs payors.

I strongly support physical therapy services be removed from permitted services under the in-office ancillary exception. This is good for CMS, consumers and independent physical therapy practitioners.

Thank you.

Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medieally underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,

Issue Areas/Comments

GENERAL

GENERAL

Dear Sir or Madam:

I am an athletic training doctoral student in the University of Toledo. I am also providing athletic service to student athletes in a local Toledo city high school.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.
While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Junji Shinohara, MS, ATC, LAT

Proposed Elimination of Exemption for Computer-Generated Facsimiles

Proposed Elimination of Exemption for Computer-Generated Facsimiles

Section 101 of the Medicare Modernization Act (MMA) requires prescription drug plan (PDP) sponsors to establish electronic prescription drug programs to provide for electronic transmittal of certain information to the prescribing provider and dispensing pharmacy and pharmacist. There is no requirement that prescribers or dispensers implement e-prescribing, however, prescribers and dispensers who electronically transmit prescription information for covered drugs for Medicare Part D beneficiaries are required to comply with any applicable final standards that are in effect. 'Computer-generated' faxes fall within the definition of 'electronic media' for e-prescribing, meaning entities transmitting computer-generated faxes are required to comply with all applicable e-prescribing standards. CMS stated in its November 7, 2005 final rule that entities that transmit prescriptions by means of computer-generated facsimile were exempted from the requirement to use the adopted National Council for Prescription Drug Programs (NCPDP) SCRIPT standard - the foundation standard adopted for the exchange of new prescriptions, changes, renewals, cancellations and certain other transactions between prescribers and dispensers. CMS now proposes to eliminate this exemption effective one year after the effective date of the final CY 2008 physician fee schedule.

The Academy supports the removal of the exemption on electronic faxes as one incentive to increase the use of electronic prescribing by prescribers and dispensers. Prescribers who already have the necessary systems in place but have not activated the e-prescribing service should easily be able to implement electronic prescribing using SCRIPT transactions.

AMCP is concerned that those prescribers who do not yet have SCRIPT-compliant systems in place, especially those in small offices and rural practices, may be affected adversely by the financial burden required in converting their practices to electronic prescribing. Our concern is that the cost to purchase new systems and the disruption in workflow that may ensue during training will delay their acquisition of SCRIPT-compliant systems. The Academy believes that the date for eliminating the exemption should be no sooner than April 1, 2009, the date by which the final e-prescribing standards become effective rather than the one year after the final rule becomes effective. This will allow more time to obtain, install and be trained on the SCRIPT-compliant systems.

While the advantages of electronic prescribing are many, including fewer medication errors and reductions in health care costs, in order to speed the transition to full electronic prescribing, additional incentives may need to be provided to both prescribers and dispensers. Such incentives could take the form of additional reimbursement for electronic prescriptions, subsidies for hardware, software and training, etc. In addition to economic incentives, CMS should implement comprehensive, uniform nationwide standards which would apply to electronic prescribing for all prescriptions, not just Medicare Part D. CMS should continue to work with the Drug Enforcement Administration to create standards for electronic prescribing of controlled substances.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Mr. Kerry N. Weems
Administrator- Designate
Centers for Medicare and Medicaid Services
Attention: CMS- 1385-P
P.O. Box 8018
Baltimore, MD 21244-8018

Subject: Medicare Program; Proposed Revisions to Payment Policies under the Physician Fee Schedule, and Other Part B Payment Policies for CY 2008; Proposed Rule

Dear Mr. Weems,
I am a physical therapist in Middletown, Ohio. I have been practicing for 17 years as an outpatient orthopedic therapist. For the first five years I worked in a private practice that was owned by two physical therapists. Since then I have been employed by Middletown Regional Hospital. I work in the Sports Medicine and Physical Therapy Department.
The purpose of my letter is regarding physician self- referral issues. I wish to comment on the July 12 proposed 2008 physician fee schedule rule, particularly regarding the issue surrounding physician self- referral and in office ancillary services exception.
I have experienced first hand how abusive physician self referral can be. As stated above, I have been with the hospital for the last 12 years. My previous boss, a PT, left our practice to start a private practice in Middletown that is physician owned by a local orthopedic surgeon group. Initially our referrals from this group of doctors dropped from 70% to 10%. Our practice was in jeopardy for several years. We have survived due to caring, hardworking PT s and PTA s who have the patients well-being, function, and goals in mind at all times.
Also, we know from patient reports that the physicians and their support staff push their patients to attend therapy at their clinic. Patients share direct quote statements from them such as, Here is a prescription for our therapy clinic. You need to go there. You will get the best care there . This will happen even if it is a previous patient of ours who wants to return to our clinic. It is the patient's choice to attend therapy where they wish to. If the patient does not demand to go elsewhere for PT, they end up in the physician s clinic. This often occurs with the elderly population because they do not question the doctor, thinking the doctor knows best .
We also have had multiple reports from patients that they are not happy with the PT care they receive there. They have too many patients at one time. They do not receive individualized care. They are left on their own to do exercise. They are treated by an aide, not a licensed individual. The average treatment time is 2-3 hours for what should take one hour maximum. To sum it up, they feel like a number.

These comments reinforce to me that physician owned PT practices are unethical and have strong potential for fraud and abuse of the patients. I believe the bottom line for these practices is money. Both the physicians and physical therapists are lining their pockets. But what about the well being of the patient and where is the quality of care? It is not a concern for these types of practices.
The in-office ancillary services exception has created a loophole that allows physician owned PT practices to thrive. Physical therapists are supposed to be autonomous healthcare professionals, musculo-skeletal experts. We do not need direct physician supervision to administer PT services. It is detrimental for our profession, but more importantly the patient is not receiving the care they deserve.
In closing, thank you for your attention to this matter. Please help stop fraudulent abuse of our Medicare system. I can be reached at our Middletown location if you have any questions

Sincerely,

Margo E. Cox

Issue Areas/Comments

Physician Self-Referral Provisions

Physician Self-Referral Provisions

I am a physical therapist manager in a community hospital. I have spent my entire career with the same hospital (6 years). The practice arena has changed significantly in the past 6 years as competition has significantly increased in our area. Unfortunately, much of this competition has eliminated fair competition and a choice for patients in regards to their physical therapy treatment.

The purpose of this letter is to document some personal Physician Self-Referral Issues as it relates to the practice of physical therapy in my area. In the Cincinnati area, nearly all orthopaedic surgery groups own their own physical therapy practice. This is wrong for patient care for a variety of reasons, a few of which I would like to outline. The potential for abuse is great with over utilization of services to generate a profit for the physicians. The main advantage for the physicians is purely monetary. It completely eliminates choice for patients as they are not aware they can attend physical therapy at a clinic of their choice. Patients often go where they are told even if the information their physician provides them is not accurate. Most, if not all of these Physicians do not disclose to the patients the fact that they have a financial interest in the physical therapy clinic. Therefore, patients are not given a choice regarding their care and eliminating competition. Patients will not choose a physical therapist based on skill, expertise, experience, etc, but based purely on where the physician recommends and in many cases insists they attend.

For this reason, there needs to be specific mention of physical therapy not being included under the list of Designated Health Services (DHS) furnished under the in-office ancillary services exception.

The original intent of the in-office ancillary services exception was to include services that could be provided in a physician s office that might not otherwise be provided, such as a primary care physician with a practice in a rural area. The very liberal interpretation of this exception has allowed the spread of Physician Owned Physical Therapy Services (POPTS) throughout the United States and in Southwest Ohio. Due to the repetitive nature of physical therapy services, it is no more convenient to provide physical therapy within a physician s office than a private clinic or a hospital-based outpatient clinic.

It has been my personal experience that patients are also referred to the hospital environment for physical therapy services that have less desirable Medicare or Medicaid HMOs. It is a shame that patients are chosen by these POPTS groups based on their financial status and not based on need for services.

Thank you for your time and consideration,

Dear Sir or Madam:

I am a certified athletic trainer working in the Addison County Supervisory Union for Middlebury Union High School in Vermont. I am responsible for the prevention, management, and reahbilitation of all injuries and illnesses sustained by our student athletes; and the resulting administrative duties. I received my B.S. in Kinesiology: Athletic Training from the University of New Hampshire in 2005. I am nationally certified and licensed by my state's department of professional regulations.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Sarah Johnstone, ATC

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Re: CMS 1385-P: 2008 Medicare Fee Schedule
Coding - Multiple Procedure Reduction Rule for Mohs Surgery

Dear Acting Administrator Kuhn:

As President of the American Society for Mohs Surgery, a medical specialty organization representing over 850 Mohs Surgeons, I would like to thank you for the opportunity to comment on the proposed change in the exempt status of Mohs surgery codes 17311 and 17313 from the Multiple Procedure Reduction Rule (MPRR). We are concerned that the proposed rule would represent a significant reversal of CMS's own longstanding exemption of the Mohs codes from the MPRR. This change would result in increased medical costs, increased recurrences of skin cancer, and increased complications following surgery.

Legal and procedural issues regarding Mohs Surgery and the proposed change in the MPRR have been addressed in a joint letter from the American Academy of Dermatology, American Society for Dermatologic Surgery, American College of Mohs Surgery, and the American Society for Mohs Surgery. I understand that a face to face meeting with representatives from these societies is scheduled. The purpose of this communication is to discuss the impact that the proposed rule would have on the treatment of skin cancer, and the resulting increased costs, patient inconvenience, and reversal of prior gains in cure rates and quality measures that would occur.

Exemption of Mohs from the MPRR since 1991 has resulted in an evolution of skin cancer care that has had positive impact on patient outcomes and cost effectiveness. The past 16 years have seen higher cure rates, fewer complications, better functional outcomes, and movement of services out of the O.R. to the physician's office or other outpatient setting, resulting in significant cost savings. Instead of having a skin cancer widely excised in the O.R. under general anesthesia and a skin graft placed, resulting in disfigurement, loss of function and an increased risk of complications, patients are treated by dermatologists who have acquired skills in accurate, margin-controlled excision (MOHS), with a cure rate of 96% to 99%, followed, usually on the same day, with a flap, linear repair, or graft. Dermatologists have enthusiastically acquired great expertise in both Mohs Surgery and the flaps required to achieve the best possible outcome to the surgical cure of skin cancer. This has been enabled by the MPRR exemption for Mohs that has allowed full payment for Mohs and repair of the first lesion on the same day.

The reversal of this rule may encourage separation of the services of extirpation and repair, moving reconstruction back into the hands of other surgical specialists who are accustomed to using general anesthesia and the O.R. to perform their cases. This would result, not in the cost savings anticipated, but would have the opposite effect, a significant increase in costs. It would also cause inconvenience to our patients, loss of time from work, increased postoperative complications from delay in repair of the Mohs-created surgical defect, and increased risks of general anesthesia and hospital acquired infections.

CMS has suggested that there are efficiencies in performing Mohs surgery on two lesions on the same day. This issue was addressed in 1991, at which time CMS concluded that Mohs surgeries are clearly separate procedures in a series of procedures. In 2006 Mohs codes were changed to 17311 and 17313 to reflect Mohs Surgery performed at different anatomic sites. The technical requirements of the procedure, however, remained the same as the 17304 procedure. Since a large part of the Mohs procedure itself involves pathology services, viz. mapping, creating frozen sections, and interpreting them, and as these pathology services must be performed separately for each separate Mohs case (each separate lesion) , treatment of two lesions on the same patient on the same day results in procedures that are largely separate. Pre- and post- service work is a minimal component of the Mohs procedure. Therefore, the second Mohs procedure performed on the same day should be exempt from the MPRR.

The July 2004 CPT Assistant article also reviewed the rationale behind the MPRR exemption: "The rationale for this policy is that for many surgical procedures some of the work of a procedure is not repeated when two or more procedures are performed. For these procedures the intraservice work is only 50% of the total work, while the other 50% represents pre- and post-service work that overlaps when multiple procedures are performed on the same patient on the same date of service. For Mohs surgery, however, greater than 80% of the work is intraservice work that does not overlap when two or more procedures are performed. The pathology portion of Mohs surgery constitutes a large portion of this total and also is not reduced with multiple procedures. The pre-service and post-service work values are small because there is a zero-day global period. Together there is very little overlap or reduction in work when two or more tumors are treated on the same patient on the same day. Therefore, Mohs surgery codes are exempt from the use of modifier 51."

Mohs and the first repair also are distinct and separate procedures. The surgeon achieves very few efficiencies by doing these on the same day. The Mohs procedure must be completed in its entirety before the repair is begun. This requires the surgeon to wait while the frozen tissue sections are being prepared before he can read the sections, determine if the tumor has been cleared, and then begin the repair. Repair requires re-rooming of the patient, repositioning of the patient, re-prepping, re-draping, re-anesthetizing and, in most cases, opening a new pack of sterilized surgical instruments for the repair.

Mohs surgery has been proven to be a cost-effective treatment for skin cancer. The payment policies that have been in place for the past 16 years have resulted in an evolution of excellence in the treatment of skin cancer. Rising costs reflect an epidemic of skin cancer in an aging population; the cost of care does not reflect lack of value. As the epidemic of skin cancer expands, we hope CMS will maintain economic policies that promote excellent, convenient, and cost efficient care which will benefit our patients and our nation as a whole.

In closing, I wish to thank you again for the opportunity to comment on an issue that is critically important to our members and the over 1 million patients with skin cancer whom we serve. Should you require additional information, please do not hesitate to contact Novella Rodgers at execdirasms@aim.com. I appreciate your attention to this important matter.

`Sincerely,

Sharon F. Tiefenbrunn, M.D.

Mohs micrographic surgery: A cost analysis????
Top of Form
Joel Cook, MDa, John A. Zitelli, MDb
Bottom of Form
Accepted 20 July 1998
Abstract
Background: The incidence of skin cancer is increasing significantly, and many people have declared the increase an epidemic. It was estimated that 900,000 to 1.2 million cases of nonmelanoma skin cancer occurred in the United States in 1994. With increasing pressure to deliver cost-effective medical care, physicians must understand the cost and value of the various methods to treat skin cancer. Objective: Our purpose was to define the true cost of treating a series of skin cancers with the Mohs micrographic technique and compare our costs with calculated estimates of the costs to treat the same cancers with traditional methods of surgical excision. Methods: A group of 400 consecutive tumors was selected. The cost of treatment in the reference group included diagnosis, Mohs micrographic surgery, reconstruction (if applicable), follow-up, and the cost to treat disease recurrence. These costs were then compared with traditional methods of surgical excision: excision with permanent section margin control, excision with frozen section margin control, and excision with frozen section margin control in an ambulatory surgical facility. For cost comparisons, it was assumed that all tumors in the comparison groups would be excised with standard surgical margins and the resultant surgical defects would be reconstructed with the simplest method possible. The costs of diagnosis, excision, pathology, reconstruction, and the cost to treat disease recurrence were then calculated and compared with the costs of treating the lesions with Mohs micrographic surgery. Results: Our calculation of costs documents that Mohs micrographic surgery is similar in cost to office-based traditional surgical excision and less expensive than ambulatory surgical facility-based surgical excision. The average cost of Mohs micrographic surgery was $1243 versus $1167 for excision with permanent section margin control, $1400 for excision in the office with frozen section margin control, and $1973 for excision with frozen section margin control in an ambulatory surgical facility. Analysis based on

anatomic location yielded similar results. Conclusion: Mohs micrographic surgery is a method of surgical excision with high intrinsic value that is cost-effective in comparison to traditional surgical excision. (J Am Acad Dermatol 1998;39:698-703.)

I am an advocate AGAINST physician owned physical therapy services. They are constructed as revenue makers for physicians. These businesses are not in the best interest of the patient. I have witnessed poor quality of care in these systems. They are detrimental toward the autonomy practice of the physical therapy profession. I ask that the stark laws be amended to end the practice of physician owned physical therapy services.

Background

Background

August 20, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,

Physician Self-Referral Provisions

Physician Self-Referral Provisions

I am currently a physical therapist in an outpatient orthopaedic clinic in central Ohio. I have been practicing as a licensed therapist for the past 5 years, all of which has taken place in similar outpatient settings. Over the course of my practice, I have become familiar with many of the physicians in this region, as well as other physical therapy practices and referral patterns. For this reason, I am writing to comment on the July 12 proposed 2008 physician fee schedule rule, specifically the issue surrounding physician self-referral and the in-office ancillary services exception.

I strongly support the removal of physical therapy from the permitted services under the in-office ancillary exception, due to the potential for fraud and abuse to occur within physician-owned physical therapy clinics. Physicians in these practices have an obvious financial incentive to refer patients to the practice in which they have ownership, and to overutilize those services for their financial gain. One example of this arrangement I have witnessed in this area is a large orthopedic physician group that for a number of years has leased space within the building that they own to a separate physical therapy corporation. Many patients were referred to this corporation in the past; recently, however, this physician group opened their own physical therapy practice under the central location exception directly across the street. Now, they refer all of their patients to their own clinic. Realistically, although patients are aware of the other options, they have chosen the physician that they believe will provide them the best care. So naturally, they will also want to choose the physical therapy clinic that comes most recommended by this same physician. In addition, the fact that Medicare requires a physician referral in order for beneficiaries to receive services only adds to this situation.

A significant problem is the potential for patients to receive substandard care by only pursuing treatment from the physician-owned therapy clinic. For example, there may be a therapist across the street who specializes in treatment for the spine, and has extensive experience in this area, while the therapists in the physician-owned practice specialize only in injuries of the extremities, or even more likely, are new grads. The physician will still be incentivized to send this patient to his own clinic, rather than to someone else who could provide the best possible treatment.

Another point to mention is the potential for physician-owned practices to use unlicensed personnel, or non-physical therapist personnel, and still bill under physical therapy codes. This situation most certainly leads to substandard care, as well as a need for prolonged services when the patient does not improve as quickly as they would under the care of an actual physical therapist. The tendency for overutilization of services by these practices only adds to the more national problem of rising healthcare costs.

Thank you very much for considering my comments on this issue.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Mr. Kerry N. Weems 08/30/07
Administrator- Designate
Centers for Medicare and Medicaid Services
Attention: CMS- 1385-P
P.O. Box 8018
Baltimore, MD 21244-8018

Subject: Medicare Program; Proposed Revisions to Payment Policies under the Physician Fee Schedule, and Other Part B Payment Policies for CY 2008; Proposed Rule

Dear Mr. Weems,
I have been practicing outpatient physical therapy in Ohio for nine years. Also filling in as needed in other treatment settings for both my current employer and other health care systems in southwestern Ohio. I am presently employed by Middletown Regional Hospital (MRH) and have been for the last six years
The purpose of my letter is regarding physician self- referral issues. I wish to comment on the July 12 proposed 2008 physician fee schedule rule, particularly regarding the issue surrounding physician self- referral and in office ancillary services exception.
Middletown is rather small, with limited options in specialty medical services. Prior to my joining the staff at MRH a large portion of our referrals (66%) came from the orthopedic group in town. The manager of our department at the time partnered with this group and subsequently referrals have declined to 16% (2007 thus far).I have heard from patients who have come to our department after attending therapy at our competition that the personalized care they receive in our clinic is a welcome change from the lack of attention/aide directed service our competition offers.
Though patients should be permitted to seek care where they desire, I have heard from my patients that physicians in the orthopedic practice mentioned above have instructed them to attend therapy at their affiliated clinic even after they have expressed a desire to come to our establishment due to both prior good experiences and being employed by the hospital (with better insurance coverage at our location)!
Secondarily, I have had the opportunity to work in Cincinnati on a PRN basis with one of the large orthopedic groups via a contract health care company. I was surprised at what I would consider abusive numbers of therapy sessions. Where as I might see an average knee scope between 6 and 10 sessions, patients were being seen 2-3 times a week for 3-4 months routinely at this location! Privately, therapists employed by this group let me know they were strongly encouraged to maintain a number of units per patient as well as keep patients in therapy as long as possible. Schedules were over booked in order to bill as many units as possible with little regard for personalized care.

Both of these experiences have led me to believe that physician owned PT practices are unethical and have strong potential for fraud and abuse of the patients. I believe the bottom line for these practices is money, both for the physician owners and kickbacks for therapists to encourage billing more units.
Care for the patients both medically and financially has been obviously lacking in both of these examples.
The in-office ancillary services exception has created a loophole that allows physician owned PT practices to thrive. Where as ancillary services such as x-ray or lab work may be appropriate and provide quicker and cheaper care, allowing physical therapy to fall under this exemption is in my experience not only inappropriate but has the potential to decrease patient care and increase costs.
In closing, thank you for your attention to this matter. Please help stop fraudulent abuse of our Medicare system. I can be reached at our Middletown location if you have any questions

Sincerely,

Stephen I. Woodward

Physician Self-Referral Provisions

Physician Self-Referral Provisions

I am a physical therapist in private practice in Kentucky. I have been in private practice for the past 15 years. In these 15 years I have seen the negative effects that allowing physical therapy to bc a designated health service (DHS) under the in-office ancillary services exception have had on the profession, patients rights to choose, and care.

I have witnessed private practice closings, in part due to the inability to 'compete' for patients who are refered only to the in-office services. Physicians who own practices that provide physical therapy services have an inherent financial incentive to refer their patients to the practices they have invested in and to overutilize those services for financial reasons. I have seen a decline in referrals from long term sources once a physician owned practice was established upward to 90-95 percent. I have experienced in the home health setting, when homebound status no longer applies and the patient needs to transition to an outpatient facility, a prohibition of the patient going anywhere but the physician office for these services. This in irregardless of convenience or choice of the patient. By eliminating physical therapy as a DHS furnished under the in-office ancillary services exception, CMS would reduce a significant amount of programmatic abuse, overutilization of physical therapy services, enhance the quality of care and provide a level playing field for which providers can operate and maintain their business.

Thank you for this opportunity to comment.

Sincerely,

Rebecca Rebitski P.T.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

My name is John Anderson. I am the Assistant Athletic Trainer/Assistant Strength and Conditioning Coach for the Milwaukee Bucks of the National Basketball Association. I received my undergradate degree from Arizona State University and my masters degree from the University of Oregon. I have certifications from the National Athletic Trainers Association, National Strength and Conditioning Association, and National Academy of Sports Medicine.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

John J. Anderson, MS, ATC, CSCS, PES, CES

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I strongly support the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. This isn't a selfish request on my part, as my contract with the hospital where I practice helps with financial supplements to the anesthesia budget. But I'm concerned about the overall anesthesia services stability nationwide, for current patient access to medical care, and this will include concern for myself as a future Medicare patient, since I'll retire in about 4-5 years.

The current payment of $16.19 per unit for anesthesia services is too low to cover the cost of employment of anesthesia personnel without hospital supplementation of income. This situation arises anywhere there is a high proportion of government payors, which is common in small rural hospitals, as well as in large university centers and "county" hospitals. These are the hospitals that can least afford to supplement the anesthesia budget, a supplementation that can be in the range of 1-2 million dollars per year, that is, up to 30-40% of the anesthesia yearly budget in some cases. This is a contributor to a shortage of anesthesia providers in smaller, more remote hospitals, leading to the recruiting of even more expensive locum tenens (temp help) providers.

Twenty years ago the Medicare payment for anesthesia was about $22.00 per unit, and since then the employed CRNA income demands have quadrupled, which has become a major contributor to the anesthesia budget deficit.

To insure that patients have continued access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase of about $4.00 per unit, offsetting a calculated 32% work undervaluation, as recommended by the RUC.

Thank you for your consideration of this serious matter.

Ref: CMS –1385-P, 72 F. R. 133, July 12, 2007 - Medicare Program; Proposed Revisions to Payment Policies Under the Physician Fee Schedule, and Other Part B Payment Policies for CY 2008

Dear Ms. Norwalk:

These comments are submitted on behalf of the American Medical Rehabilitation Providers Association (AMRPA). AMRPA is the national voluntary trade association which represents over 550 freestanding rehabilitation hospitals, rehabilitation units of general hospitals, and a number of outpatient rehabilitation service providers. Many, if not most, of our members provide outpatient therapy services either through the outpatient departments of hospitals or though outpatient clinics, Comprehensive Outpatient Rehabilitation Facilities (CORFs), or rehabilitation agencies. We have reviewed the proposed rule in-depth and our comments follow.

A. TRHCA—SECTION 101(b): — PQRI, pg 38197

The Tax Reform and Health Care Act of 2006 (TRHCA) created the Physician Quality Reporting Initiative (PQRI) under which eligible professionals who successfully report a designated set of quality measures on claims for dates of service from July 1 to December 31, 2007, may earn a bonus payment, subject to a cap, of 1.5% of total allowed charges for covered Medicare physician fee schedule services. The Act also directed CMS to publish proposed measures that would be appropriate for eligible professionals to use to

submit data on the quality of covered professional services furnished to Medicare beneficiaries in 2008. In addition, these measures must have been endorsed or adopted by the National Quality Forum (NQF) and the AQA Alliance (AQA). Eligible professionals include physical therapists (PTs), occupational therapists (OTs), and speech language pathologists (SLPs).

The rule proposes measures from seven categories for inclusion in the 2008 Physician Quality Reporting Initiative (PQRI). The proposed rule would also retain some of the 2007 PQRI measures to the extent that they have been NQF endorsed.

1. **Addressing a Mechanism for Submission of Data on Quality Measures Via a Medical Registry or Electronic Health Record, pg 38203**
   The rule proposes the use of registries which professionals would use to report data to CMS in 2008 and discusses 5 different registry options that the agency plans to explore in 2008. CMS stated in the rule that it will test one or more of these options in 2008. CMS does not discuss nor propose a way to allow professionals who are paid by FIs (such as professionals in hospital outpatient departments, SNFs, and CORFs) to participate in the PQRI. AMRPA is concerned that CMS has not addressed this issue, thereby denying the many PTs, OTs, and SLPs who practice in these settings an opportunity to receive the bonus payment. We do not believe the TRHCA statute or history intended to exclude these professionals. CMS did not make provision for payment of these professionals who practice in these settings for July 1, 2007 to December 31, 2007 either. AMRPA recommends that CMS remedy this problem in this rule.

   Comments and Recommendation
   There are two ways this problem may be resolved. One option is that all eligible professionals would report their quality measures to the providers in which they practice using their National Provider Identifier. The providers would serve as registry and be responsible for verifying that the professionals meet the reporting requirements specified by CMS.

   Under a second option, we recommend that eligible professionals, PTs, OTs, SLPs, that report to the registries also provide the provider number for the hospital, SNF, or CORF, or wherever they practice. The registry must therefore be built to accept provider numbers as well as other data items. Once the registry information is reviewed and approved, payment can be approved and it can be sent to the provider. Or, the registry would forward the approved information directly to the fiscal intermediary for that provider, which will then send payment to the provider. We would be willing to work with CMS further on these issues.

B. Therapy Standards and Requirements, pg 38191
The rule would also require that persons furnishing physical and occupational therapy and speech language pathology services (PT, OT, SLP) to beneficiaries meet licensing, registration, and certification requirements in the state in which they practice, and that they complete an approved educational program for the services they are furnishing. It proposes, as well, to grandfather certain therapists and assistants with comparable

education and training and then requires that therapists who begin their practice after January 1, 2008 be licensed, certified, registered, or otherwise regulated as a type of therapist to be recognized by Medicare.

The proposed rule would also apply these new personnel qualifications to the inpatient rehabilitation hospital setting, among others. Specifically, it would cross reference the personnel qualifications for therapists in 42 CFR 484.4 (personnel qualifications) as updated by the proposed rule to the Medicare Condition of participation for Hospitals, Subpart D, Section 482.56 Condition of participation: Rehabilitation Services, as well as amend other regulations.

In addition, it proposes to clarify that hospitals' plans of care include physical therapy, occupational therapy, and speech language pathology plans of treatment. Specifically, according to the preamble to the proposed rule, it would require inpatient hospital services to include a plan of treatment consistent with the plan required for outpatient therapy services under Part B as part of the amendments to the Condition of participation referenced above, as well as other regulations. The physician review and certification of the therapy plan "is implied in the physician review and approval of a facility plan that includes therapy services." The rule also proposes to change the outpatient therapy certification requirements from 30 days to not to exceed 90 days, subject to several conditions.

Comments and Recommendations

1. ***Personnel Qualifications***
   Generally, we support the personnel qualifications as proposed and in applying them to the rehabilitation hospitals and units. However, we are concerned that there is no mention of the state practice acts. We are assuming that references to "licensed" would mean licensed pursuant to the state practice acts and that the services that constitute therapy services delineated therein would be incorporated by reference.

2. ***Application to Rehabilitation Hospitals and Units***
   In applying the proposed personnel qualifications to rehabilitation hospitals and units, we recommend that the proposal be amended, as stated above, to recognize the scope of state practice acts and all the services recognized as within the scope of skilled therapy services.

3. ***Application of Part B Therapy Services' Plan of Treatment Requirement to Inpatient Rehabilitation Hospitals and Units***
   Regarding plans of treatment, we examined 42 CFR 410.61 and the Medicare Benefits Policy Manual Section 220.1.2, Plans of Care for Outpatient Physical Therapy, Occupational Therapy, and Speech Language Pathology Services. It is unclear per the proposed rule which Part B requirements the hospitals and units would have to meet. We compared these to the IRF Exclusion Criteria 42 CFR 412.23 (b)(6) and the Medicare Benefit Policy Manual Section 110 regarding Inpatient Hospital Rehabilitation Care.
   The process of care in the inpatient setting is different from the outpatient setting in that patients are in a different stage of recovery regarding medical and functional

needs. Hence the scope, duration, and frequency of therapy services will differ. Inpatient rehabilitation hospitals and units traditionally provide an interdisciplinary plan of care which includes rehabilitation medicine, nursing, and other services and incorporates the three therapy services in the overall plan. Any additional paperwork implicit in a discipline specific plan of care in addition to an interdisciplinary plan and progress report is redundant and contrary to an interdisciplinary inpatient rehab approach to care We recommend that if there are any conflicts between any Part B policies on plan of treatment for therapy services with Part A requirements that the Part A requirements have precedent. These would include for example:

- Certification of the policy which is recognized in the proposed rule.
- Recertification
- Treatment began before the plan of care is in writing performed only by or supervised by the assessing therapists (MBPM Section 220.1.2)
- No requirements regarding timed codes, treatment time minutes due to different requirements (MBPM Section 220.1.2)
- Duration of weeks for plan of care stated in terms of weeks or visits when inpatients usually stay for shorter periods, possibly less than a week.
- Completion of additional forms: The plan of care is part of the chart under Part A. We understand that under Part B therapists have to complete a form 700. We do not support nor recommend that additional paperwork requirements be included in this proposal.
- We also recommend that the regulation be clear that any plan of treatment for therapy services can be integrated (as it is now) in the over plan of care created for every IRF inpatient.

Therefore, we recommend that 42 C.F.R. 482-56(b)(2) proposal be amended as follows:
"Such plan of treatment may be included in an overall plan of care for the patient. **The physical therapy, occupational therapy, or speech language pathology must be in accordance with a written plan of treatment that meets the requirement of paragraph (b)(3)(i) through (b)(3)(iv) of this section."**

4. ***Other Comments: " Incident to Services"***
We are concerned that as CMS is seeking to make certain personnel qualifications applicable in multiple settings that it also addresses the issue of delivery of services "incident to" physician services. We recommend that similar requirements be provided by appropriately licensed, registered, or certified individuals.

C. CORF Issues, pg 38171

The rule will also make extensive changes in the CORF Conditions of Participation which include:

1. Adding a new subpart to reflect changes in CORF payment methodology,
2. Requiring services to relate directly to the patient's rehabilitation plan of care,
3. Removing coverage for drugs and biologicals,
4. Revising the definition of physician services, respiratory services, social services, psychological services and nursing services,
5. Revising the definition of supplies, equipment and appliances, and

6. Paying for services in the home where payment is not otherwise paid for under the home health benefit.

Comments and Recommendations

1. Outpatient Therapy Certification Requirements (pg 38193). We recommend that the proposed change in certification requirements (from 30 days to 90 days) should also apply to CORFs. The proposed rule excludes CORFs from the settings affected by the change in certification requirements despite CMS's stated position that "therapy services should be provided according to the same standards and policies in all settings,"

   According to CMS, adjusting the first CORF recertification interval from 60 to 90 days would allow the physician to approve a plan of care that represents the clinically appropriate length of treatment, discourage routine 60-day plans, encourage professional determination of an appropriate length of treatment at the time of the initial certification, reduce the administrative burden on providers, suppliers, physicians, and Medicare contractors, and provide an appropriate timeline for monitoring the necessity of continuing therapy services.

   Therefore, we recommend that CMS amend 42 C.R.F. 424.27 so that recertification must occur every 90 days after beginning treatment in a CORF.

2. Changes in CORF Services
   We have several recommendations about a number of the CORF proposals. We believe the proposals to curtail payment for drugs and biologicals, revise the definition of social and psychological services, and revise the definition of supplies, equipment, and appliances are contrary to the CORF statute. We do not support the proposed rule in that the statute is clear that CORF services are to mirror those services available under the inpatient hospital benefit. We also do not support the change of grouping psychological and social services. We do however support the proposal regarding payment for CORF services in the home. These issues are discussed in greater detail below.

   Specifically,

   a. Drugs and Biologicals (pg 38175). We disagree with CMS's proposal to remove drugs and biologicals as a CORF service. When enacting the original CORF legislation, Congress intended to create a new type of outpatient facility that could provide all of the services required by a patient in a coordinated fashion. The patient's ability to obtain all rehabilitation services at a CORF was intended to provide patients an alternative to the difficulty of obtaining the same comprehensive set of services from multiple providers, in a coordinated fashion. By law, these services are designated as CORF services and CMS does not have authority to eliminate these services via the rule making process. CMS's concern over its inability to detect any duplicative billing is not cause for the agency to, in effect, rewrite the law and remove drugs and biologicals from the scope of CORF services. We urge CMS to find an alternative strategy to achieve its objectives without removing coverage of this longstanding benefit.

b. Payment for CORF Services (pg 38176). We believe that CMS should separately pay CORFs for CORF physician services.

Prior to 1999, CORFs were reimbursed for the cost of CORF physician services as a result of the cost-based payment methodology. Specifically, medical director costs and other costs associated with CORF physician services were included on the facility cost report and CORF payments were based on those costs. However, with introduction of the new payment methodology in 1999 CORFs were no longer reimbursed for CORF physician services even though these services are required by statute and CMS regulations. The non-facility PFS payments for CORF services (i.e., physical therapy, occupational therapy, SLP, respiratory therapy, nursing and social/psychological services) fail to fairly compensate the CORF for services provided by a CORF physician that are administrative in nature or otherwise involve the coordination of each patient's comprehensive plan of care, such as consultation with and medical supervision of non-physician staff, patient case review conferences, utilization review, and the review of the therapy plan of treatment.

CMS's position that the "administrative costs associated with the provision of [CORF physician services] are incorporated into payment amounts established under the PFS through the PE RVUs" is inaccurate. Although these payment levels may be defensible for physician office settings and other non-facility settings, they are inappropriately low for the CORF setting where by law the level of required administrative physician activity (i.e., CORF physician services) is greater than in a physician office. In essence, CMS is proposing to reimburse a CORF as if it were equivalent to a physician office, completely ignoring the costs associated with operating as the specialized facility clearly envisioned by Congress. Since there is no facility payment for these services, we urge CMS to develop appropriate codes with associated fees (similar to G0128, the code used for covered nursing services provided in a CORF setting) for required CORF physician services.

We will be happy to meet with CMS to discuss any of the above comments. If you have any questions about these recommendations, please contact Carolyn Zollar at czollar@13x.com or 202-223-1920.

Sincerely

Joseph P. Caroselli

Re: Stark III Proposal

Mr. Donald H Romano:

Over the past five years as a medical sales representative, I have witnessed unethical business conduct due to physician ownership in surgical laser devices.

Surgical lasers have become a large avenue in which the "per click" concept applies. It has been my experience that when a physician purchases a laser asset solely or enters into a joint venture partnership to supply laser rental services within a hospital setting the patient is not given all adequate information on the different types of treatments available, hospitals pay higher rates and equipment is sub-par or below industry standards.

Unfortunately, patients and hospitals are caught in the middle therefore unable to receive services for surgical lasers at fair market value. Fewer RFP's (Request for proposal) are seen in the market place today because hospitals are being forced to lease from the physician owned L.L.C... If a hospital chooses not to use a physician owned L.L.C. then they risk loosing patients to the competing hospital across town that will gladly except the physician owned L.L.C. As a result, hospitals and patients are receiving services at much higher rates and technology that is typically sub-par.

Further more, I have seen an overall increase in laser utilization, not because it's the right treatment for patients, but merely a means to produce significant substantial revenues for private practice physicians. I strongly believe if this trend is not corrected the medical community could suffer financially and patients will continue to receive sub-par treatments.

Sincerely,

Concerned Medical Sales Representative

Background

Background

Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,

M. Dean Kirkwood, CRNA

August 30, 2007

Dear Sir or Madam:
I am a certified athletic trainer working at The University of Tennessee, Knoxville, TN. I work with athletes at the Division I level. I received my Bachelor of Scienee degrec in Kinesiology: Athletic Training from the University of New Hampshire in Durham, NH. I am currcntly pursuing my Master of Science degree in Tennesscc. I was certified by the Board of Certification in 2006 and am currently licensed to practice athletic training in New Hampshire and Tennessee.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.
While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of aecess to quality health care for my patients.
As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.
The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.
Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural elinics, and any Medicare Part A or B hospital or rehabilitation facility.
Sincerely,
Bethany Storck, ATC/L

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

I am a licensed and certified athletic trainer currently employed through a physical therapy clinic to provide prevention, treatment, and rehabilitation services to nearly 700 athletes on 38 different teams at a high school located in Toledo Ohio. I learned the skills needed to perform these tasks at the University of Utah in there Athletic Training Education program. During this time I worked in several different settings including collegiate athletics, high schools, and physical therapy clinics. I am currently pursuing a Masters degree from the University of Toledo. The skills I learned at my undergrad prepared me to sit and pass the National Board of Certification Exam that everyone must pass before become an athletic trainer. In addition to this, I then obtained state licensure in Ohio in order to work as an athletic trainer in that state.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. Ambulance Services

Ambulance Services

August 29, 2007

Leslie Norwalk, Acting Administrator
Centers for Medicare & Medicaid Services
Department of Health & Human Services
Attention: CMS-1385-P
P.O. Box 8012
Baltimore, Maryland 21244-8012

Re: CMS-1385-P; Medicare Program; Proposed Revisions to Payment Policies Under the Physician Fee Schedule, and Other Part B Payment Policies for CY 2008; Proposed Revisions to the Payment Policies of Ambulance Services Under the Ambulance Fee Schedule for CY 2008.

Dear Ms. Norwalk:

MBI Solutions, Inc., based in Kettering Ohio provides billing services for the ambulance providers throughout the State of Ohio and Virgina. The proposed rule would have a direct negative impact on our operations and the ability to effectively provide emergency transport services to Medicare beneficiaries. We believe this proposed rule will inappropriately provide incentives to seek signatures from patients who are in need of medical care and under mental duress. Additionally, this proposed rule could have a negative impact on wait times in the emergency department, impacting ambulance operations and the operations of emergency departments throughout the country. We therefore submit the following comments in objection to the proposed rule.

In summary, here are the points we would like you to consider:
? Beneficiaries under duress should not be required to sign anything;
? Exceptions where beneficiary is unable to sign already exist and should not be made more stringent for EMS billing;
? Authorization process is no longer relevant (no more paper claims, assignment now mandatory, HIPAA authorizes disclosures);
? Signature authorizations requirement should be waived for emergency encounters.

We understand that the proposed rule was inspired by the intention to relieve the administrative burden for EMS providers. However, the relief being proposed by CMS would have the unintended effect of increasing the administrative and compliance burden on ambulance services, hospitals and their billers, and would result in shifting the payment burden to the patient if they fail to comply with the signature requirements at the time of transport. Accordingly, we urge CMS to abandon this approach and instead eliminate entirely the beneficiary signature requirement for emergency ambulance services.

Sincerely,

Steve Broughton

Mr. Kerry N. Weems
Administrator - Designate
Centers for Medicare and Medicaid Services
US Department of Health and Human Services
Attention: CMS-1385-P
PO Box 8018
Baltimore, MD 21244-8018

Subject: Medicare Program; Proposed Revisions to Payment Policies under the Physician Fee Schedule, and Other Part B Payment Policies for CY 2008: Proposed Rule

Dear Mr. Weems:

Please allow me to introduce myself. I am a physical therapist with multiple practices in New York State. I have been practicing physical therapy for over 15 years and have enjoyed lending a helping hand in the community.

At this time I would like comment on the July 12 proposed 2008 physician fee schedule rule, specifically the issue surrounding physician self-referral and the "in-office ancillary services" exception. I would like to urge you to remove the practice of physical therapy from the in-office ancillary services exception. The potential for fraud and abuse exists whenever physicians are able to refer Medicare beneficiaries to entities in which they have a financial interest, especially in the case of physician-owned physical therapy services. Physicians who own practices that provide physical therapy services have an inherent financial incentive to refer their patients to the practices they have invested in and to over utilize those services for financial reasons. By eliminating physical therapy as a designated health service furnished under the in-office ancillary services exception, CMS would reduce a significant amount of programmatic abuse, over utilization of physical therapy services under the Medicare program, and enhance the quality of patient care. Therefore, please protect physical therapy by removing PT from the in-office ancillary services exception.

Recognizing that you are a very busy individual, I would like thank you for taking the time for consideration of this matter.

Sincerely,

Dana Mandel PCS, PT

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:
I am a licensed athletic trainer and Director of Citizens Memorial Hospital Outpatient Sports Medicine Center in Bolivar, Missouri. As a licensed health care professional I provide physical medicine and rehabilitation services to injured athletes in southwest Missouri. Our physical rehabilitation services to patients are a perfect example of how athletic trainers are more than capable of treating injured athletes in an outpatient setting and returning them to functional and pain-free recreational sport activities.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.
As a licensed athletic trainer, I've been treating athletes with injuries for 14 years and I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My health care education, clinical experience, and national board of certification exam ensure that my patients receive the highest quality of health care. Since 1990, the AMA has recognized us as allied health care professionals. You should also know I have a 98% patient satisfaction rate for my services in our outpatient physical rehabilitation department. Missouri state law and my hospital medical professionals have deemed me qualified to perform the physical medicine and rehabilitation services. However, your proposal will possibly dissolve our outpatient department, put essential healthcare professionals out of work and put patients at risk for poor treatment by physical therapists who are not educated to treat athletic related injuries. Over my years of practice I've had hundreds of referrals from physicians because they know the injured athletes will receive the highest quality of care and effective treatment from a qualified health care professional.

The lack of access and workforce shortage to fill therapy positions is widely known throughout healthcare. It is irresponsible for CMS, which should be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients.

I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility, PART 482, 485, & 491.

Sincerely,

MorganSimpson,AT Licensed AthleticTrainer

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my support for the proposal to inerease anesthesia payments under the 2008 Physician Fee Schedule. CMS has recognized that anesthesia services are undervalued, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Most physician services, either for a procedure or office visit, are valued for the complexity of the procedure. Anesthesia services have a component of complexity in the base unit charge, but most of our services are related to our time spent with the patient without regard to the complexity of the service performed or the patient's underlying condition. Medicare payment for anesthesia services stands at just $16.19 per unit, half the value paid 20 years ago. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations. Our nation's seniors are living longer, and will continue to need anesthesia services, and it is imperitive that the practice of anesthesia remains an attractive choice to medical school graduates.

In an effort to rectify this situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Respectfully,

Richard Colavita, M.D.

Background

Background

August 20, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,

ASDS
American Society for Dermatologic Surgery

August 28, 2007

The Honorable Herbert Kuhn
Acting Administrator
Centers for Medicare and Medicaid Services
Department of Health and Human Services
Washington, DC 20201

Re: CMS 1385-P: 2008 Medicare Fee Schedule
Coding – Multiple Procedure Reduction Rule for Mohs Surgery

Dear Acting Administrator Kuhn:

As President of the American Society for Dermatologic Surgery (ASDS), a medical specialty organization representing over 4700 dermatologic surgeons, including the vast majority of those performing Mohs micrographic surgery, I would like to thank you for the opportunity to comment on the proposed change in the exempt status of Mohs surgery codes 17311 and 17313 from the Multiple Procedure Reduction Rule (MPRR).

We are concerned that the proposed rule, which would be a significant reversal of CMS' own longstanding exemption of the Mohs codes from the MPRR, may represent a misunderstanding of the separate and unique nature of Mohs surgery relative to other procedures on the same day. The result would be an inappropriate application of the MPRR that will have a negative impact on Medicare beneficiaries' access to timely care, with a potential increase in risk and cost.

Back in 1991, CMS determined that the Mohs codes were indeed separate and distinct procedures, for which an exemption from the Multiple Procedure Reduction Rule was appropriate. CMS stated at that time that Mohs surgeries "are a series of surgeries which, while done on the same day, are done at different operative sessions and are clearly separate procedures in a series of procedures...They will be paid separately with no multiple surgery reductions." We believe this determination by CMS was correct, and note that the exemption has been maintained ever since.

At the request of CMS in the 2006 five-year review of the Mohs codes, we worked with AMA CPT/AMA RUC to develop two new base codes, 17311 and 17313, to reflect Mohs surgery on different anatomic sites. The new codes differed only in the specification of anatomic site. Although new codes were created, there were and have been no changes in the "technical elements of the procedure" that should alter CMS' original determination that exemption was appropriate. The AMA CPT/AMA RUC review of the new codes and descriptors did not change the characteristics that qualified the new 17311 and 17313 codes for inclusion on the modifier -51 exemption list. While the old Mohs surgery code was deleted with the adoption of the new codes, the nature of the procedure has not changed, nor should the exempt status of the new codes change.

The basis for CMS's original exemption related to an examination of the procedure itself. Mohs surgical excision of a skin cancer includes meticulous excision of the tumor and complete histopathologic examination of the margins. The excision of tumors is completed in stages, such that each stage must be completed in entirety prior to subsequent stages or repair. Each stage consists of rooming the patient, discussing, positioning, anesthetizing, prepping, draping, excising, dressing, mapping, inking, processing, and interpreting the histopathology; stages are repeated until tumor margins are clear.

5550 Meadowbrook Drive, Suite 120 Rolling Meadows, IL 60008 Tel. 847-956-0900 Fax. 847-956-0999 www.asds.net

Treatment of multiple tumors at the same time requires each component be completed for each tumor. The patient waits during the processing and interpretation portions of the procedure. Repair procedures following Mohs tumor excision require that all the same steps be undertaken again (except the tissue processing and interpretation), usually with new instrumentation and often in different rooms. As such, each Mohs tumor excision is performed in a completely separate operative session from every other tumor excision and from any repair procedure. There is minimal overlap in work from one stage to the next, from excision to repair, or between Mohs excision of two separate tumors at the same time.

Mohs surgery includes both surgical and pathological components; the inherent requirements for both account for the minimal overlap between Mohs excision of two separate tumors at the same time and between Mohs excision and a subsequent repair. Because of these dual components of surgery and pathology, 80% of the work of Mohs code 17311 is intra-service work (78% for 17313), with little pre- or post-service work. Such valuation was examined and approved by the RUC. The large amount of intra-service work, in addition to the fact that the Mohs tumor excisions are performed at separate operative sessions from repairs, differentiate the Mohs codes from other surgical codes. Because of the large pathology component of the Mohs codes, which must be completed in its entirety for each tumor independently and before contemplating repair, the "efficiencies" referred to in the proposed rule are not realized for Mohs surgery, even for treatment of two tumors on the same date. **It is inappropriate to subject these codes to the MPRR for efficiencies which don't exist.**

Additionally, approximately half the physician work of the Mohs codes represents work related to histopathology. As with all pathology codes, work of interpreting one block or specimen is completely independent of interpretation of other specimens; as such, exemption of pathology codes is appropriate, and they traditionally have not been subject to multiple surgery reduction. **Application of the MPRR to the Mohs codes would be incongruous with the appropriate exemption of other pathology codes.**

In determining characteristics of codes appropriate for exemption from the MPRR, the AMA CPT/AMA RUC Modifier -51 Workgroup identified various criteria. In addition to CMS longstanding exemption and the large amount of intra-service work referred to above, which meet two of the criteria, Mohs surgery codes are used both as adjunct codes

and as stand-alone codes. Although usually used as adjunct codes with separate repair codes, in 10-30% of cases, depending on the surgeon, wounds created by Mohs excision
are allowed to heal by second intention, with no repair procedure performed. This is particularly true for defects in concave areas such as the alar crease, medial canthus, and conchal bowl, in addition to sites off the face and less noticeable areas, such as the posterior pinna. **Such adjunct and stand-alone use meets a third criterion for exemption.**

We are concerned that the application of the MPRR to the Mohs codes will decrease Medicare beneficiaries' access to timely care and potentially increase complications and costs. In approximately 10% of cases, more than one Mohs excision is performed on the same date. This is most likely for patients with multiple tumors, who tend to be older patients and those patients at high risk due to immunosuppression from organ transplantation, chemotherapy, medication, etc. These are also the patients at greatest risk for metastasis from squamous cell carcinoma and subsequent morbidity and mortality. Application of the MPRR will delay treatment for these high-risk patients and increase the risk of subsequent complications.

Application of the MPRR to the Mohs codes may also affect repair patterns, with potential increases in cost. Reduced reimbursement for the lower-valued code, whether Mohs tumor excision or the associated repair, will make it less cost-effective for surgeons to excise and reconstruct cancers on the same day. This will likely result in an increase in referral by Mohs surgeons to other surgeons for reconstruction. Such referrals would most often be to plastic surgeons, facial plastic surgeons, or oculoplastic surgeons, most of whom operate in the hospital or in ambulatory surgery centers, where the cost of reconstruction is greater than that of the Mohs surgeon practicing in less expensive facilities. **The increased cost of repair will offset potential cost savings of the MPRR.**

ASDS
American Society for
Dermatologic Surgery

There are many reasons for the increase in utilization of the Mohs codes, including an increasing number of skin cancers, which currently affect over one million Americans and are projected to affect one in five Americans in their lifetimes. At the same time, there is an increasing number of surgeons trained in the Mohs technique utilizing the codes. While application of the Multiple Procedure Reduction Rule could appear to be a cost-savings measure and tempting to apply to Mohs surgery, it is inappropriate by previous CMS decision and current RUC policy, as I have detailed previously. Mohs surgery is a separate and distinct procedure from other procedures performed on the same day and for which no significant gain in efficiencies exists when performed with other procedures.

Application of the reduction will negatively impact care and unnecessarily put patients at risk without generating significant cost savings. We urge CMS to amend the Proposed Rule and permanently restore the exemption from the Multiple Procedure Reduction Rule to the Mohs codes 17311 and 17313.

Thank you again for the opportunity to comment on an issue that is critically important to our members and the skin cancer patients we serve. Should you require additional information, please do not hesitate to contact Lisle Poulsen, ASDS Advocacy and Socioeconomic Affairs Manager, at lpoulsen@asds.net or (847) 956-9125. I appreciate your attention to this important matter.

Sincerely,

Alastair Carruthers, FRCPC

Re: CMS-1385-P
THERAPY STANDARDS AND REQUIREMENTS

Dear Sir or Madam:

The Oklahoma State Board of Medical Licensure and Supervision submits the following comments on the proposed rules changing the definition of "physical therapist" in Section 484, Title 42 of the Code of Federal Regulations. The proposed rules are part of the 2008 Proposed Revisions to Payment Policies Under the Physician Fee Schedule and Other Part B Payment Policies for Calendar Year 2008, found in Volume 72 of the Federal Register, published on July 12, 2007.

Under subsection (i)(B) and (ii)(B) of the proposed definition of "physical therapist" an applicant would need to have "[p]assed the National Examination approved by the American Physical Therapy Association." We strongly suggest that CMS rely on state licensure and that the additional examination requirements contained in subsections (i)(B) and (ii)(B) of the definition of "physical therapist" be deleted from the final rule. At the very least, the Centers for Medicare and Medicaid Services ("CMS") should delay promulgation of the proposed rule until CMS has had an opportunity to understand the examination, credentialing, and licensing processes currently in place.

We, along with all of the other state boards of physical therapy examiners, have already adopted a national qualifying exam for physical therapists, the National Physical Therapy Examination ("NPTE"). The Federation of State Boards of Physical Therapy ("FSBPT") develops and administers the NPTE in close collaboration with the state boards. Working together, we have developed a national passing score. The FSBPT has done an outstanding job of meeting our needs. Likewise, the NPTE has been a valuable tool in screening physical therapist applicants. Through the NPTE, we have been able to successfully filter applicants. In turn, we, as a policing body, have been able to protect the public by ensuring that only qualified therapists are licensed care for our citizens.

CMS should not usurp the states' function of licensing physical therapists and other professionals. Health care professional credentialing and licensing is a classically state function. Licensing and credentialing are the domain of the states. CMS' proposal would inappropriately transform a state function into a federal function. There is no justification for this action, and CMS should prevent it by removing the proposed rule.

CMS respects states' rights and state licensure for other health care professions, and it should continue to do so with respect to physical therapists. For example, CMS' regulations define a physician as a "doctor of medicine ... legally authorized to practice medicine and surgery by the State in which such function or action is performed." 42 C.F.R. § 484.4 (2006). Likewise, a registered nurse is defined as "[a] graduate of an approved school of professional nursing, who is licensed as a registered nurse by the State in which practicing." 42 C.F.R. § 484.4. Establishing requirements that are different than what the states require for licensing PTs would be inconsistent with not only the rights of the states, but also CMS' own standards.

Moreover, the federal government should not impose an additional burden on the states, particularly since its stated desire for a national examination already satisfied and its other stated goals would not be better met by the burden it proposes to impose. The proposed unfunded mandate could result in the development of a second exam, which would create confusion and more work for the states, without benefit. Our resources are already limited and stretched.

In the preamble to the proposed regulations, CMS says that it is seeking uniformity. The fact of the matter is that uniformity and consistency across the nation and across provider settings already exists. State licensing requirements apply to physical therapists without regard to where they practice. All states accept CAPTE accreditation. All states accept the NPTE and have adopted the same passing score. No federal regulation is required.

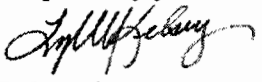
In fact, the proposed regulations would likely defeat CMS' own goal of uniformity. If, for example, the APTA were to approve a different exam than the NPTE, which the regulations would permit it to do, physical therapists, patients, including Medicare and Medicaid beneficiaries and recipients, and others could face substantial confusion and interruption of service. As a state board of physical therapy examiners, we would continue to have authority to select an exam of our choice for licensing purposes. However, under the proposed rule, a physical therapist would have to pass a second exam approved by the APTA to qualify for Medicare reimbursement. Thus, patients might be forced to change physical therapists as they become Medicare or Medicaid eligible, and the current uniformity and continuity of standards across the country would be lost. Thus, the proposed rules undermine CMS' ambition for uniformity of standards.

CMS and the federal government should not empower an advocacy group, like the APTA, to establish an examination or any qualifications for professionals to provide healthcare services to patients. The APTA's mission is to advocate and promote the profession. As a licensing body, our mission is to ensure that physical therapists are qualified to provide physical therapy services and are authorized to do the work for which they are trained. The FSBPT, the organization to which we look for the national licensing exam, was created to eliminate, protect against and prevent the inherent conflict of interest that the APTA would have if it were to have authority over the examination and credentialing processes. Even the APTA recognized this conflict of interest problem two decades ago when it created the Federation of State Boards of Physical Therapy. CMS must not allow this conflict of interest to become a rule.

The Oklahoma Board of Medical Licensure and Supervision strongly urges CMS to require only state licensure. Most importantly, CMS should remove the additional examination requirements contained in subsections (i)(B) and (ii)(B) of the definition of "physical therapist." At a minimum, CMS should delay promulgation of the proposed rule until CMS has had an opportunity to understand the examination, credentialing, and licensing processes currently in place.

We appreciate the opportunity to comment on the proposed rules regarding physical therapist and physical therapy assistant qualification requirements.

Respectfully yours,



Lyle Kelsey,
Executive Director
Oklahoma State Board of Medical
Licensure and Supervision

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)
Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

As a physician, I take pride in participating in the care of our Medicare recipients. However, under the current Medicare Fee Schedule the expenses incurred providing the care exceed the reimbursement. In many hospitals this situation has put our seniors in the middle of strained relations between anesthesia providers and hospital administrators. I am thankful CMS is taking the steps to correct this untenable situation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Sincerely,

Michael J. Friedman, MD

Issue Areas/Comments

GENERAL

GENERAL

Dear Sir or Madam:

My name is Jay Gallegly and I am new to the Athletic Training Profession. I received my undergraduate degree from Lindenwood University in Saint Charles, Missouri. I am currently working on my Masters of Science in Health and Kinesiology at the University of Texas at Tyler. Along with going to Graduate School, I work as an Athletic Trainer in a rural east Texas town. I am the main health care provider for the schools athletes and my duties include preventing, recognizing, managing and rehabilitating injuries that result from physical activity.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Jay Gallegly, ATC, LAT

ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia serviees which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth ratc (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medieally underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,

Jess G Hoyman II CRNA,MS

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Therapy Standards and Requirements

Therapy Standards and Requirements

Dear Sir or Madam:
I work as a Secondary School Athletic Trainer in a very populated urban area of Florida. My work hours are not your typical 9am-5pm job, there are many days that I work well over the contracted 7.5hrs per day in order to provide the best physical medicine and rehabilitative services to our athletes. I am required by law to maintain my licensure and certification with 75 continuing education units in three years. For your information the public can access The Board of Certification at bocatc.org or 877 262-3926 as well as the National Athletic Trainers' Association at nata.org or 214 637-6282 to have an overview of how extensive the credential process is for an Athletic Trainer. Besides the professional standards my job consists of making sure all of our athletes are medically cleared to participate in all sports. Statistically our school has 2300 students and many of them roughly 1200 tryout for an extracurricular activity including our ROTC program all need a pre-participation physical. I work alone with a part-time Athletic Trainer contracted to our school by a physical medicine company. If the proposed changes to CMS-1385-P are ratified the quality of the health care to our student athletes will be severly compromised. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitative facility.
Sincerely,
Kathleen Feuerbach, ATC

Issue Areas/Comments

GENERAL

GENERAL

August 30, 2007

Dear Sir or Madam:

I am an athletic trainer at the University of Missouri. In Missouri we have nearly 700 licensed athletic trainers, with over half of them working in the clinical setting with outreach to high schools. I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Dwight Eric McDonnell, M.Ed., ATC, LAT

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

My name is Shannon Pirmann. I am a Certified Athletic Trainer for outpatient rehabilitation services at Genesis Medical Center - Illini Campus in Silvis, Illinois. I also provide athletic training services to United Township High School in East Moline, Illinois. I have been practicing as an athletic trainer for 6 years, with the last 4 in my current position. I earned a Bachelor's degree in Sports Medicine from North Park University in Chicago, Illinois and a Masters degree in Physical Education (Athletic Administration) from Loras College in Dubuque, Iowa. I am a current member of the National Athletic Trainers Association. I also carry Athletic Training licensure in both Illinois and Iowa.

In my current employment setting, I am able to practically apply what I learned in my undergraduate and graduate studies to provide assistance to patients of all ages in physical therapy in treatment and documentation. Following evaluation by a Physical Therapist, I assist patients in administration of appropriate exercise form and techniques, gait, instruction and use of assistive devices and braces, and massage. I also have formal training in the use and application of modalities such as ultrasound, electrical stimulation, hot packs, and cold packs.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. Background

Background

August 20, 2007
Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,
Kimberly Brandtonies, CRNA

GENERAL

GENERAL

I am a certified athletic trainer working in a rural high school. I have 6 years of experience in the high school, collegiate, professional athletic settings, as well as hospital experience. I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Amy Barrall, MEd, ATC

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Background

Background

Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to
ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for
Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007.
However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically
underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase
the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,

Re: CMS-1385-P; Medicare Program; Proposed Revisions to Payment Policies Under the Physician Fee Schedule, and Other Part B Payment Policies for CY 2008; Proposed Revisions to the Payment Policies of Ambulance Services Under the Ambulance Fee Schedule for CY 2008.

Dear Ms. Norwalk:

Our organization provides emergency ambulance services to the communities which we serve. The proposed rule would have a severely negative direct impact on our operation and the high quality health care we provide to Medicare beneficiaries. In addition, we believe this proposed rule will inappropriately provide incentives to seek signatures from patients who are in need of medical care and under mental duress. Additionally, this proposed rule would have a negative impact on wait times in the emergency room impacting our operations and the operations of emergency rooms throughout the country. We therefore urgently submit comments on ills of the proposed rule.

In summary, here are the points we would like you to consider:

- Beneficiaries under duress should not be required to sign anything;
- Exceptions where beneficiary is unable to sign already exist and should not be made more stringent for EMS;
- Authorization process is no longer relevant (no more paper claims, assignment now mandatory, HIPAA authorizes disclosures);
- Signature authorizations requirement should be waived for emergency encounters.

We understand that the proposed rule was inspired by the intention to relieve the administrative burden for EMS providers. However, the "relief" being proposed by CMS would have the unintended effect of increasing the administrative and compliance burden on ambulance services and the hospitals and would result in shifting the payment burden to the patient if they fail to comply with the signature requirements at the time of incident. Accordingly, we urge CMS to

abandon this approach and instead eliminate entirely the beneficiary signature requirement for emergency ambulance services.

Current Requirement

When the beneficiary is physically or mentally incapable of signing, the industry has been following the requirements listed in the CMS Internet Only Manual, Pub. 100-02, Chapter 10, Section 20.1.2 and Pub. 100-04, Chapter 1, Section 50.1.6(A) (3) (c). These sections allow for a representative of the ambulance provider or hospital to sign on behalf of the beneficiary when the patient is unable to sign, document that the beneficiary was unable to sign, the reason and that no one could sign for the beneficiary.

The proposed rule directly conflicts with the existing rule. It requires that the provider representative sign **contemporaneously** with the transport and **seek an additional signature** from the hospital in the event a patient is unable to sign.

BENEFICIARY UNDER DURESS SHOULD NOT BE REQUIRED TO SIGN ANYTHING

Emergency ambulance providers have no admission department and no registration desk. The same individuals responsible to providing medical care and transportation to the hospital are also responsible for fulfilling the administrative functions. All EMS encounters are emergency in nature and medically necessary ambulance transports in particular are stressful events on patients.

CMS has recognized this modified its rules for obtaining Advance Beneficiary Notice and Acknowledgement of HIPAA Privacy Notices, creating exceptions that do not require ambulance crews to interrupt their care to seek a signature from a patient under their care.

In fact, CMS has deemed that all emergency encounters put the patient under great duress. Under such duress, patients would sign anything in order to get the care they require. Therefore, any signature obtained in an emergency situation cannot be relied upon.

Yet the proposed rule is so burdensome on ambulance crews that they will have every incentive to obtain a patients signature even though the patient is under mental duress. The very reason they need ambulance transportation often contraindicates the appropriateness of attempting to obtain a signature from the beneficiary.

EXCEPTIONS WHERE BENEFICIARY IS UNABLE TO SIGN ALREADY EXIST AND SHOULD NOT BE MADE MORE STRINGENT FOR EMS

While the intent of the proposed exception is to give ambulance providers explicit relief from the beneficiary signature requirements where certain conditions are met, we note that the proposed exception does not grant ambulance providers any greater flexibility than that currently offered by existing regulations. Specifically, 42 C.F.R. §424.36(b)(5) currently permits an ambulance provider to submit a claim signed by its own representative, when the beneficiary is physically or mentally incapable of signing and no other authorized person is available or willing to sign on the beneficiary's behalf. The proposed exception essentially mirrors the existing requirements that the beneficiary is unable to sign and that no authorized person was available or willing to sign on their behalf, while adding additional documentation requirements. Therefore, we believe that the new exception for emergency ambulance services set forth in proposed 42 C.F.R. §424.36(b)(6) should be amended to include only subsection (i), i.e. that no authorized person is available or willing to sign on the beneficiary's behalf.

It is important for CMS to realize that the first two requirements in the proposed sub-division (ii) are always met, as the ambulance crew will always complete a trip report that lists the condition of the beneficiary, the time and date of the transport and the destination where the beneficiary was transported. For this reason, we do not object to the requirement that an ambulance provider obtain documentation of the date, time and destination of the transport. Nor do we object to the requirement that this item be maintained for 4 years from the date of service. However, we do not see any reason to include these in the Regulation, as they are already required and standard practice.

The Proposed Rule would add a requirement that an employee of the facility, i.e. hospital, sign a form at the time of transport, documenting the name of the patient and the time and date the patient was received by the facility. Our organization **strongly objects** to this new requirement as:

- Instead of alleviating the burden on ambulance providers and suppliers, an additional form would have to be signed by hospital personnel.
- Hospital personnel will often refuse to sign <u>any</u> forms when receiving a patient.
- If the hospital refuses to sign the form, it will be the beneficiary that will be responsible for the claim.
- The ambulance provider or supplier would in every situation now have the additional burden in trying to communicate to the beneficiary or their family, at a later date, that a signature form needs to be signed or the beneficiary will be responsible for the ambulance transportation.
- Every hospital already has the information on file that would be required by this Proposed Rule in their existing paperwork, e.g. in the Face Sheet, ER Admitting Record, etc.

We also strongly object to the requirement that ambulance providers or suppliers obtain this statement from a representative of the receiving facility *at the time of transport*. Since the proposed rule makes no allowances for the inevitable situations where the ambulance provider makes a good faith effort to comply, but is ultimately unable to obtain the statement, we believe this requirement imposes an excessive compliance burden on ambulance providers and on the receiving hospitals. Consider what this rule requires—the ambulance has just taken an emergency patient to the ER, often overcrowded with patients, and would have to ask the receiving hospital to take precious time away from patient care to sign or provide a form. Forms such as an admission record will become available at a later time, if CMS wants them for auditing purposes in addition to the trip transport that will already include date, time and receiving facility.

<u>AUTHORIZATION PROCESS IS NO LONGER RELEVANT (NO MORE PAPER CLAIMS, ASSIGNMENT NOW MANDATORY, HIPAA AUTHORIZES DISCLOSURES)</u>

<u>Purpose of Beneficiary Signature</u>

a. <u>Assignment of Benefits</u> -The first purpose of the beneficiary signature is to authorize the assignment of Medicare benefits to the health care provider or supplier. However, assignment of covered ambulance services has been mandatory since April 2002. Furthermore, 42 C.F.R. §424.55(c), adopted November 15, 2004 as part of the Final Rule on the Physician Fee Schedule (67 Fed. Reg. 6236), eliminated the requirement that beneficiaries assign claims to the health care provider or supplier in those situations where payment can only be

made on an assignment-related basis. Therefore, the beneficiary's signature is no longer required to effect an assignment of benefits to the ambulance provider or supplier.

CMS recognized this in the Internet Only Manual via Transmittal 643, by adding Section 30.3.2 to Pub. 100-04, Chapter 1. As a result, the beneficiary signature is no longer needed to assign benefits of covered ambulance services.

b. Authorization to Release Records - The second purpose of the beneficiary signature is to authorize the release of medical records to CMS and its contractors. However, the regulations implementing the HIPAA Privacy Rule, specifically 45 C.F.R. §164.506(c) (3), permit a covered entity (e.g. an ambulance provider or supplier) to use or disclose a patient's protected health information for the covered entity's payment purposes, without a patient's consent (i.e. his or her signature). Therefore, federal law already permits the disclosure of medical records to CMS or its contractors, regardless of whether or not the beneficiary's signature has been obtained.

Signatures Not Required for ABN's for Emergency Transports

The Third Clarification of Medicare Policy regarding the Implementation of the Ambulance Fee Schedule states that Advanced Beneficiary Notifications only be issued for non-emergency transports. The ABN's which require beneficiary signature "may not be used when a beneficiary is under great duress" which would include emergency transports. Would not the requesting of a Medicare Beneficiary's signature for any other reason during an emergency transport be less duress?

Signature Already on File

Almost every covered ambulance transport is to or from a facility, i.e. a hospital or a skilled nursing facility. In the case of emergency ambulance transports, the ultimate destination will always be a hospital. These facilities typically obtain the beneficiary's signature at the time of admission, authorizing the release of medical records for their services *or any related services*. The term "related services", when used by hospitals and SNFs, can mean more than only entities owned by or part of the facility. The term already includes physicians providing services at the facility. We believe that ambulance transport to a facility, for the purpose of receiving treatment or care at that facility, constitutes a "related service", since the ambulance transports the patient to or from that facility for treatment or admission. Therefore, we believe a valid signature will be on file with the facility. Additionally, for those transports provided to patients eligible for both Medicare and Medicaid, a valid signature is on file at the State Medicaid Office as a product of the beneficiary enrollment process.

Electronic Claims

It is also important to note that, as a result of section 3 of the Administrative Simplification Compliance Act and the implementing regulations at 42 C.F.R. §424.32, with very limited exceptions (e.g. providers or suppliers with less than 10 claims per month), ambulance suppliers must submit claims electronically. Thus, the beneficiary does not even sign a claim form. When submitting claims electronically, the choices for beneficiary signature are "Y" or "N". An "N" response could result in a denial, from some Carriers. That would require appeals to show that,

while the signature has not been obtained, an alternative is accepted. As a result, many Carriers allow a "Y", even though the signature was not actually obtained, if one of the exceptions is met.

While this may be a claims processing issue, since you are now looking at the regulation, this would be a good time to add language indicating that the signature requirement will be deemed to be met if one of the exceptions to the requirement exists.

Program Integrity

It is important for CMS to realize that, for every transport of a Medicare beneficiary, the ambulance crew completes a trip report listing the condition of the patient, treatment, origin/destination, etc. AND the origin and destination facilities complete their own records documenting the patient was sent or arrived via ambulance, with the date. Thus, the issue of the beneficiary signature should not be a program integrity issue.

SIGNATURE AUTHORIZATIONS REQUIREMENT SHOULD BE WAIVED FOR EMERGENCY ENCOUNTERS.

Conclusion

Based on the above comments, it is respectfully requested that CMS:

- Amend 42 C.F.R. §424.36 and/or Pub. 100-02, Chapter 10, Section 20.1.1 and Pub. 100-04, Chapter 1, Section 50.1.6 to state that "good cause for ambulance services is demonstrated where paragraph (b) has been met and the ambulance provider or supplier has documented that the beneficiary could not sign and no one could sign for them OR the signature is on file at the facility to or from which the beneficiary is transported".
- Amend 42 C.F.R. §424.36 to add an exception stating that ambulance providers and suppliers do not need to obtain the signature of the beneficiary as long as it is on file at the hospital or nursing home to or from where the beneficiary was transported. In the case of a dual eligible patient (Medicare and Medicaid), the exception should apply in connection to a signature being on file with the State Medicaid Office.
- Amend 42 C.F.R. §424.36(b) (5) to add "or ambulance provider or supplier" after "provider".

In light of the foregoing, we urge CMS to forego creating a limited exception to the beneficiary signature requirement for emergency ambulance transports, especially as proposed, and instead eliminate the beneficiary signature requirement for ambulance services entirely if one of the exceptions listed above is met.

Thank you for your consideration of these comments.

Sincerely,

Lawrence E. Mroz

Background

Background

As a CRNA working in a rural hospital in Henderson, NC; I see how desperately Maria Parham Medical Center needs an increase in reimbursement for Anesthesia Services.
We can not continue to provide service under the current payments. MPMC pays out double than it takes in for its Anesthesiologists and Nurse Anesthetists. We have cut back 25% in personnel in the last year and still lose money. We can not maintain staffing if we lower salaries and benefits.
Rural America needs Anesthesia Services and we are bearing the brunt of lower payments from all payers, lack of insurance of our patients and illegal aliens using our services.
All payers follow Medicare s lead, we need you to approve an increase in Medicare payments and values for Anesthesia Care.
Thank You,
Kevin Maltais, CRNA

RE: CMS–1385–P (BACKGROUND, IMPACT)
ANESTHESIA SERVICES

Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS' proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS' proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

- First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
- Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers' services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
- Third, CMS' proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS' proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America's 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency's acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Sincerely,

Issue Areas/Comments

Background

Background

Dear CMS:
I am a nurse anesthetist in a rural area of which approx. 30% of our patients are medicare. I am writing as a member of the AANA to support the CMS proposal to boost the valuation of anesthesia services by 32%. This would increase the anesthesia conversion factor by 15% in 2008 as compared with current levels. (72 FR 38122, 7/12/2007). The increase is vital for several reasons: 1. Studies by Medicare Payment Advisory Commission (medpac) and others have shown that most Medicare B reimbursements are at or above 80% of private market rates while anesthesia services are reimbursed at 40% or less of private market rates. 2. Anesthesia reimbursement rates have been slipping behind inflation rates and this correction would bring rates closer in line with inflation increases. 3. 36,000 CRNA's provide 27,000,000 anesthetics per year mainly in rural and underserved areas and fair medicare reimbursement is important in continuing to provide quality anesthesia services to these areas. I support the agency's acknowledgement that anesthesia payments have been undervalued and strongly support the proposal to adjust the valuation to bring payments in line with inflation and other medical services. Thank you for your work on behalf of this fair proposal.

Re: CMS-1385-P: Medicare Program: proposed Revisions to Payment Policies Under the Physician Fee Schedule, and other Part B Payment Policies for CY 2008; Proposed Revisions to the Payment Policies of Ambulance Services Under the Ambulance Fee Schedule for CY 2008; and the Proposed Elimination of the E-Prescribing Exemption for Computer-Generated Facsimile Transmissions

Dear Mr. Kuhn,

The American Geriatrics Society (AGS), an organization of nearly 6,800 geriatrics healthcare professionals who are specially trained in the management of care for frail, chronically ill older patients, appreciates the opportunity to provide comments on the proposed physician fee schedule for CY 2008.

Background

Geriatricians are physicians who are board certified in family medicine or internal medicine and who complete additional fellowship training in geriatrics. Geriatricians serve as both primary care providers and consultants to other primary care providers on the sickest patients in Medicare, serving these patients across the full care continuum. The patients of geriatricians are often medically complex, chronically ill, and frail because of a combination of physical, mental and social ailments. Geriatric medicine promotes wellness and preventive care in older persons, with emphasis on care

management and coordination, frequently involving a team of health care professionals. The care management and coordination helps patients maintain functional independence in some cases and decrease the rate of decline in others, thus improving their overall quality of life.

Specific Comments:

The AGS has the following specific comments on the proposed fee schedule rule for 2008. The order of comment reflects the order presented in the proposed rule.

However, AGS priorities are, in order:

1. Fix the flaws of the SGR methodology and avert a dramatic payment cut that will impair the physician care network for the most frail and complex Medicare patients;
2. Apply budget neutrality provisions to work RVUs through adjustments in the conversion factor and not to the work RVUs themselves through a "work adjuster." This more accurately implements the correction of the E/M valuations accomplished at the most recent five year review;
3. Do not substitute pay for reporting programs for fee schedule annual updates because the latter reflect real practice cost trends;
4. Address the undervaluation of Home Visit and Domiciliary Visit care; and
5. Adjust PE RVUs administratively so that they can be reallocated in a budget neutral manner across other services in the fee schedule.

"Resource-Based PE RVUs"

AGS strongly believes that a guiding principle behind resource-based PE RVUs should be that they reflect actual relative costs of services and do not create an incentive to over utilize any services. CMS proposed a 70% usage assumption in the past based on data supplied by Abt Associates. However, it implemented an assumption of 50% usage for capital equipment which is not based on any empiric data, including survey data. Most observers believe the 50% assumption to be low for the actual use of capital equipment by the typical provider. The higher Medicare practice expense payments resulting from this assumption incentivize over-use. CMS could take a position that is both data driven and policy driven, i.e. that the fee schedule should pay for capital equipment based on an assumption of reasonable efficiency. We do not believe that 50% usage is reasonably efficient. We recommend that CMS propose and implement an equipment usage assumption that is more reasonable than 50%.

Further, we request that before finalizing any changes to the equipment use percentage, CMS explain and demonstrate the redistributive effects of such a change. Without that kind of discussion, AGS does not believe it is possible to provide helpful comments to CMS on such a proposal. For example, if CMS is going to consider increasing the utilization percentage of specialty-specific equipment that costs more than $500,000,

AGS would like to know whether the redistributive effects of such a proposal would be among codes performed by that specialty or whether the effects would be across specialties. Specifically we would like to understand the effects of such a proposal on evaluation and management ("E/M") services.

Lastly, we request that CMS revise its equipment utilization percentage before Congress acts legislatively so that the redistribution of PE RVUs is budget neutral. If Congress acts on this issue then it is possible that any reductions in PE RVUs could be considered "savings" and those RVUs could be taken out of the system.

"Medicare Telehealth Services"

AGS supports CMS' proposal to add CPT Code 96116, Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities), per hour of the psychologist's or physician's time, both face-to-face time with the patient and time interpreting test results and preparing the report, to the list of telehealth services. CPT code 96116 is a new code that replaced 96115 in 2006 as part of revisions to the neuron/psychological tests codes. Before this renumbering took place, CPT code 96115 (the predecessor to 95116, as described) was on the telehealth services list. Therefore, AGS considers this to effectively be a restoration of the status of CPT 96115. Because the descriptor for 96116 seems to require that the service be provided "face-to-face" we request that CMS clarify that "face-to-face" services may qualify as telehealth services.

AGS also supports adding subsequent hospital care codes (CPT 99231-99233) to the list of telehealth services when they are reported to describe follow-up services to an inpatient consultation. There are a number of clinical scenarios where treating physicians will request the opinion of a geriatrician (e.g., regarding evaluation of falling spells or suitability for nursing home placement) but none is available in the hospital and a telehealth consultation would be required. CMS correctly notes that the deletion of the "Follow-up Inpatient Consultation" codes which used to be on the list of telehealth services before those codes were deleted from CPT has created the need to add subsequent hospital care codes to the list of telehealth services when those codes describe follow up inpatient consultation care. We recommend that CMS create a special modifier that would be appended to CPT codes 99231-99233 when appropriate to report the furnishing of follow-up inpatient consultation care via telehealth.

"Coding-Additional Codes from 5-Year Review"

AGS requests that CMS discontinue use of the work adjuster it established in CY 2007 as a means to budget neutralize the work RVUs increases for E/M services. The work adjuster has had the unintended consequence of significantly harming payments for specialties whose patient population is predominantly Medicare beneficiaries. For

example, almost all of the patients seen by home care physicians are Medicare beneficiaries. Therefore, home care physicians have not only seen their request for an increase in home visit work RVUs denied by the RUC but it has actually seen a 10% decline due to the work adjuster. This year, the work adjuster has been proposed to increase due to the revaluation of anesthesia work and certain other codes. This will amount to another decrease in payment for home care physicians who cannot offset this decrease by performing services whose work values have increased. AGS believes that continuing the work adjuster at the proposed 12% will have a devastating effect on home care. Therefore, AGS requests that CMS remove the work adjuster and make the work revaluations due to the 5 year review budget neutral through adjusting the conversion factor.

AGS also requests that CMS reconsider its proposal to accept the RUC recommendation to not increase the work value for home visit codes. AGS believes that the home care physicians made a compelling case that the home visit work values should remain "relatively" the same with respect to office visit codes as they did before the five year review.

Because there were limited reference codes available for the five year review, the Home Care codes were used for magnitude estimation. However, in spite of this, the RUC rationales for the E/M recommendations do not always rely upon the Home Care codes. But their use as reference services made it impossible for the RUC to seriously consider any revisions in Home Care valuations as it would potentially undermine a portion of the foundation of the five year review recommendations for E/M services. Additionally, the Home Care codes had recently been considered appropriate for cross-walking the valuations for Domiciliary Care codes.

Consequently, it was inevitable that the RUC would find no compelling evidence that the Home Care codes were mis-valued and it would not even consider data regarding valuations. We believe the relationship between Domiciliary Care and Home Care codes and other E/M codes that existed prior to the five year review were reasonable. But more significantly we believe that CMS should consider the data presented by the American Academy of Home Care Physicians and it should ask the RUC to review these data. The RUCs comments will provide useful information to CMS so that CMS may deliberate as to whether Home Care and Domiciliary Care codes remain correctly valued.

At no point during the five year review was it suggested that the Home Care codes presented a rank order anomaly with the other E/M services at their previous valuation. Unfortunately, in spite of this fact, the results of the five year review have created a series of rank order anomalies and have had the unintended consequence of creating a serious problem for one group of physicians - home care physicians.

A growing volume of home care services are being provided by teams who dedicate their practices entirely to patients requiring home care, not by individual clinicians who perform a very limited number of home care services for select long-term patients of their office based practices. Because we believe the highest quality home care is being

provided by organized teams dedicated to this service, it is detrimental to the care of these most vulnerable patients to allow this matter to go unaddressed. Agreeing to our previous recommendation of using the conversion factor for budget neutrality adjustments instead of a work adjuster only will ameliorate part of the problem for these dedicated professionals. That is not enough. Therefore, we also recommend that CMS review the home care visit valuations and ask the RUC to assess the current valuations and submit recommendations to CMS specifically addressing whether the current valuations of home care visits may be a rank order anomaly that warrants reassessing the work values.

Alternatively, or in addition to RUC review, CMS may wish to convene a refinement panel to assess this situation. Lastly, we encourage CMS to use this opportunity to review its practice expense policy related to time and resources unique to home care. A quality demonstration project may be appropriate to sustain this safety net resource and measure the care provided.

"Update"

Although not officially part of the proposed rule, AGS wishes to register its objections to the 10% negative update that will take effect unless Congress takes legislative action. Part of the reason for the 10% negative update is CMS' refusal to remove the increasing cost and utilization of drugs out of the calculation of the sustainable growth rate. We believe CMS has the administrative discretion to take such action and we recommend that it do so, even though it has refused to do so for the past 5 years.

"Therapy Standards and Requirements"

AGS supports the CMS proposal to eliminate the 30 day recertification requirement for physical therapy services. We agree with CMS that such a requirement does not affect the duration for which physical therapy is provided. Furthermore, performing the recertification at 30 day intervals is an unnecessary administrative burden and the requirement actually results in unnecessary patient visits to the certifying physician.

Removing this requirement will allow physicians to certify the length of treatment that is medically necessary. We agree that physicians should document the need for ongoing physical therapy in the medical record, as appropriate. However, we request that CMS clarify that it is not implementing any new documentation requirements that would be a "substitute" for the certification.

"Exemption to Foundation Standard Requirements for Computer Generated Facsimiles"

AGS understands that this exemption was created because not all e-prescribing standards have been issued; many physicians were using computer generated fax technology in connection with e-prescribing and that the cost of complying with the e-prescribing standard was a significant issue.

The CMS proposal appears to be in response to the continued use of computer generated fax technology and a perceived lack of movement by physicians to comply with the e-prescribing standards.

Although the proposal would not take effect until one year after the effective date of the CY 2008 PFS final rule, we urge CMS to move even more slowly. AGS has members that do e-prescribing, internal to their electronic health record, with facsimile transmittal and we believe that many of those members would simply go back to paper prescriptions if they were forced to comply with the e-prescribing standard at significant cost. At a minimum CMS should do a survey of physicians to determine the costs of compliance with the standard and continue the exemption until the cost is low enough for most physicians to make the necessary changes.

To the extent that this form of e-prescribing improves patient care, removal of the exemption would be an administration action that could negatively affect patient care.

"TRHCA-Section 101(b): PQRI"

AGS believes it is too early to comment on the success or failure of the program and will comment on the program after it has obtained input from its members who are participating in CY 2007. We do support funding the infrastructure necessary for quality reporting and improvement as well as the general principles that are the basis for PQRI; these include: physician involvement in measure development, promoting quality measurement as a routine activity in patient care and recognizing that a pay for volume (i.e., service) system inadequately promotes and rewards the care many beneficiaries need.

AGS agrees that quality should be measured as long as the measures are valid and reflect the care being provided. It also supports the development of an infrastructure that allows valid measurement of quality. AGS does not believe that its members are currently being rewarded for the care they provide to Medicare beneficiaries and it does not know whether PQRI will provide a valid measurement of, or reward for, quality.

However, the PQRI is not, and should never be considered, a substitute for a negative update to the conversion factor. Receiving a 1.5% bonus while losing 12% of the other 98.5% of a provider's reimbursement is not a reasonable trade-off, nor is it adequate to support access to care or investing in the infrastructure necessary to improve quality.

The use of electronic health records and data registries in PQRI or any quality measurement program has the potential to simplify the administrative burden of data collection and facilitating those efforts should be supported.

Conclusion

We hope to work with CMS on the development of the final rule. If you should have questions or comments on this letter, please contact Paul Rudolf our Counsel at 202-775-5731.

Sincerely,

Todd P. Semla

These comments are provided by ATA in response to the proposed regulations for Medicare Telehealth Services issued by CMS in the July 12, 2007 Federal Register (pages 38143-38145).

Subsequent Inpatient Visits 99231-233

ATA requested CMS to add "subsequent hospital care" codes since the previous "subsequent inpatient consultation" codes were deleted. CMS declined to approve the request since the "subsequent hospital care" codes are broader and include services for acutely ill patients. The Agency stated a lack of comparative analyses showing the efficacy of using telemedicine for acute cases. The ruling stated "We continue to have concerns about using a telecommunications system as a substitute for the on-going (in person) evaluation and management (E/M) of a hospital inpatient. Therefore, we propose to not add subsequent hospital care as described by HCPCS codes 99231 through 99233 to the list of Medicare telehealth services" (p.38144). However, CMS requested comments about providing telehealth reimbursement for "subsequent hospital care for telehealth only when the codes are used for follow-up inpatient consultation (and not for inpatient visits)."

Two scenarios were described to CMS in ATA's original request to re-establish Subsequent Inpatient Visits – the first scenario including patients admitted to a rural or remote inpatient hospital or critical access hospital, both eligible originating sites, by an attending physician and followed by the same attending physician, who subsequently consulted with a specialist for the care of the patient and the second scenario involving an attending or admitting physician who sees the patient in-person for the initial visit, and provides subsequent care via telemedicine including after-hours and weekend unscheduled visits. The comparison *is not* between in-person care, versus care via telemedicine, the comparison ***is when no other care is available***. ATA can provide information stating that there are equivalencies between in-person and telemedicine encounters, but it is ipso facto evident that in such cases telemedicine is better than ***no*** care. Studies have been conducted that indicated care is better than no care when provided for in-person care, and clearly show that appropriate, timely care provides better clinical outcomes than no care at all.

In the past, CMS has added several CPT codes to the list of approved Medicare telehealth codes without evidence submitted to show that telemedicine does not alter the diagnosis, and that patients and providers are satisfied with telehealth encounters. Two such sets of codes are the dialysis codes approved in 2004, and the psychiatric diagnostic interview examination (as described by CPT code 90801) added to the list of Medicare telehealth services in CY 2003. "To date, Medicare expenditures for telehealth services have been extremely low. For instance, in CY 2006, the total Medicare payment amount for telehealth services (including the originating site facility fee) was approximately $2 million. The addition of CPT code 90801 in 2003 resulted in an increase in Medicare payment amounts of approximately $100,000 in CY 2006. In its own words, CMS has stated "moreover, previous additions to the list of Medicare telehealth services have not resulted in a significant increase in Medicare program expenditures." (p. 38216)

The process of requiring Class 2 evidence for addition of subsequent inpatient care as well as the denied neurodevelopment testing codes, does not meet the need of CMS to identify cost-savings strategies with implementation of new CPT codes, nor does it allow for a comparison of when no care is available versus providing care via telehealth. The system simply does not fit. CMS itself has not adhered to the process in adding previous CPT codes in 2003 and 2004. With the federal government using telehealth throughout the Veteran's Administration Health system as well as Indian Health Services, and with the strong application of telemedicine in military operations and health care organizations, the public continues to be denied the benefits of access to care through telehealth due to a process for approval that does not fit the current environment nor the situation in which telehealth is most valuable, when ***no*** care exists.

ATA continues to request the addition of subsequent hospital care for subsequent inpatient visits 99231-99233. ATA provided substantial information to CMS in the original CPT code request for addition of services showing that in the instance where NO services were available, critical specialty services were able to be provided to rural and remote patients through the use of telemedicine. The first situation in which codes 99231-99233 would be used is when no services are available and where telemedicine can be used to provide such specialty services. The availability of a tertiary care trauma surgeon, a neurologist for both initial and follow-up stroke evaluation, a psychiatrist for initial assessment and prescriptive safety orders, an infectious disease provider, or a cardiologist can all be accomplished over telemedicine when no one of these specialties are available on-site. The first issue is not one of replacing on-site services, the issue is putting a specialist and a generalist together in the most critical period, the acute phase, when diagnostic and interventional decisions can decrease cost and improve clinical outcomes. The golden hour of trauma and the window of opportunity for stroke are two such examples where the addition of a specialist to the diagnostic decision tree ultimately improves clinical outcomes.

Telemedicine networks throughout the country are starting to target telestroke care. In areas where local stroke care specialists are not available, telemedicine can link an emergency department or ICU physician with a specialist in a stroke treatment center. This consultation provides an opportunity for administration of thrombolytic drugs within the short therapeutic time window associated with ischemic stroke. The University of Maryland Medical Center used a triplexed integrated services digital network line providing a 30-frames-per-second video link to St Mary's Hospital >100 miles away. The system uses a pan, tilt, and zoom camera with

remote site control, allowing 2-way, real-time, audiovisual communication and CT image transfer. In this study, a retrospective review was conducted of all acute stroke consultations provided to St Mary's Hospital between 1999 and 2001. Fifty consultations were reviewed. Of the 50, 23 were attempted through telemedicine linkage, and 27 were by traditional telephone conversation, followed by transfer. Of the 23 telemedicine consultations, 2 were aborted because of technical difficulties. Of the patients evaluated by traditional means, 1 of 27 (3.8%) received intravenous rtPA; 5 of 21 (23.8%) received rtPA after telemedicine consultation. No patients experienced complications. In conclusion, telemedicine consultation provided treatment options not previously available at the remote hospital. Administration of rtPA during telemedicine consultation was feasible and safe, and the system was well received. In some cases coding for such services may be considered part of emergency room or outpatient services. However, in many other cases where the patient has been admitted, such services are in-patient care. Lack of reimbursement for such telemedicine services will hinder widespread adaptation of this promising technology for remote acute stroke treatment.

CMS has stated they continue to have concerns about using a telecommunications system as a substitute for the on-going (in person) evaluation and management (E/M) of a hospital inpatient and with the acuity of hospitalized patients. Patients seen in the emergency department typically have a higher acuity, are more precarious in their physical state, and many times do not have a diagnosis. Hospitalized patients have been seen and admitted by an on-site physician and have a preliminary diagnosis. Emergency patients do not. Yet, CMS reimburses for care delivered via telemedicine to emergency patients. We provide the following study as evidence that if the needs of higher acuity emergency patients can be met through telemedicine, we also believe that hospitalized patients' needs can also be met. In a study by Handschu et. al.[1], acute stroke care was evaluated. In acute stroke care, rapid but careful evaluation of patients is mandatory but requires an experienced stroke neurologist. Telemedicine offers the possibility of bringing such expertise quickly to more patients. This study tested for the first time whether remote video examination is feasible and reliable when applied in emergency stroke care using the National Institutes of Health Stroke Scale (NIHSS). A multimedia tele-support system for transfer of real-time video sequences and audio data was used. The remote examiner could direct the set-top camera and zoom from distant overviews to close-ups from the personal computer in his office. Acute stroke patients admitted to our stroke unit were examined on admission in the emergency room. Standardized examination was performed by use of the NIHSS (German version) via telemedicine and compared with bedside application. In this pilot study, 41 patients were examined. Total examination time was 11.4 minutes on average (range, 8 to 18 minutes). None of the examinations had to be stopped or interrupted for technical reasons. Unweighted [kappa] coefficients ranged from 0.44 to 0.89; weighted [kappa] coefficients, from 0.85 to 0.99. The study concluded that *remote examination of acute stroke patients with a computer-based telesupport system is feasible and reliable when applied in the emergency room*; inter-rater agreement was good to excellent in all items.

Since these early tests, the use of telemedicine for treating stroke patients has expended throughout the globe. At the Partners Telestroke Center in Boston, MA they have successfully

[1] LaMonte, Marian P. MD, MSN; Bahouth, Mona N. MSN, CS, CRNP; Hu, Peter MSE; Pathan, Mohammed Y. MD; Yarbrough, Karen L. MS, CS, CRNP; Gunawardane, Ruwani MD; Crarey, Patrick MD; Page, Wesley MD. Telemedicine for Acute Stroke: Triumphs and Pitfalls. Stroke. 34(3):725-728, March 2003.

used telemedicine to provide 24 hour acute "stroke expertise-on-demand" to a number of hospitals in Massachusetts. Their services are used by local hospitals to fulfill state and federal laws requiring such services for all emergency rooms. Similar services are starting to be used in many other hospitals and medical centers in the United States, Canada, the UK, Scandinavia and other parts of the world. According to a study performed at the Henry Ford Hospital in Detroit "Telemedicine for stroke has the promise to become a key revolutionary component of an integrated health-care delivery system. It can link rural hospitals and under-resourced urban hospitals with regional acute stroke centers of excellence, enhancing standardized streamlined care throughout a system's care facilities. It may be important to link isolated lower stroke volume hospitals to a larger stroke network." [2]

In some instances, not allowing these codes to be used can result in blocking Medicare patients from receiving these services, reversing previous Congressional and CMS policy and flying in the face of over 15 years of experience, federal investments and supportive research. For cases such as the use of telemedicine for early assessment of stroke patients and providing inpatient care where specialist services are not otherwise available, such a decision denying coverage will inevitably lead to additional early deaths.

With respect to cost, there is data showing that costs associated with hospitalizations in the acute management of the patient when specialty services are available via telemedicine go down. In a study conducted by the University of California at Davis, the objective of the research was to examine the fiscal impact of telemedicine consultations for acutely ill and injured children in a rural setting using pediatric intensive care unit (ICU) telemedicine. One hundred seventy-nine acutely ill and injured infants and children were cared for in the Mercy Redding ICU from April 2000 to April 2002. Data were gathered from these patients, including 47 patients who received 70 pediatric ICU telemedicine consultations during the same time period. Transport and hospital costs avoided were calculated for patients who received telemedicine consultations (Group 1) and for those not transferred due to the availability telemedicine consultations (Group 2), estimated to be one-half of the 179 patients (Group 2). The revenue generated in the rural ICU based on the ability to keep these patients was also determined. An estimated annual cost savings of $172,000 and $300,000 for transport and inpatient care was demonstrated for Group 1 and Group 2, respectively. Additionally, this program resulted in generating $186,000 and $279,000 of inpatient revenue annually for the two groups at the rural hospital. The cost of this program was approximately $120,000 per year. Given the substantial financial savings, support for underserved rural programs, and significant funds kept in the rural community, this may serve as a viable model for providing care to acutely ill and injured infants and children.[3]

Financial Benefits of a Pediatric Intensive Care Unit-based Telemedicine Program to a Rural Adult Intensive Care Unit: Impact of Keeping Acutely Ill and Injured Children in Their Local Community

Neurobehavioral Status Exam and Neuropsychological Testing

ATA asked for approval of codes relating to both types of services. CMS approved neurobehavioral status exams (HCPCS code 96116) as an eligible telehealth service. However the Agency stated: "We believe that neuropsychological testing services are category 2 services because, as explained further below in this section, the roles of and interaction among the physician or practitioner at the distant site and beneficiary at the originating site are not similar to existing telehealth services." CMS added: "the information submitted was not sufficient to enable us to determine whether the use of a telecommunications system would affect the diagnosis or treatment plan as compared to a face-to-face delivery of neuropsychological testing services" (p. 38144). Therefore, CMS did not propose to add the service has asked for evidence where such services could be provided effectively using telemedicine, opening the door for a positive decision later.

The codes are used to report "the services provided during testing of the cognitive function of the central nervous system. The testing of cognitive processes, visual motor responses, and abstractive abilities is accomplished by the combination of several types of testing procedures". Testing includes administering such tests as the MMPI and WAIS, Developmental Screening Test II, Early Language Milestone Screen, etc. Typically, these tests are administered by a trained technician without the physician or provider present, under the general supervision requirements (Jun 23, 2006, CMS Manual System, Pub 100-02 Medicare Benefits Policy, sec 80). Physicians who will use 96116 to provide a neuropsychological exam will determine, as a result of that exam, which tests are appropriate for the patient. The tests are then typically administered by a technician who reports the results in a standardized fashion to the provider. In the telehealth example, there are many tests which are easily carried out via telehealth. Memory tests, visual recognition, language and other visual or verbally oriented tests can be easily administered via telehealth. For those tests that require in-person assistance, the telepresenter would assist, as they do in other consultations and visits already approved.

In a study by Cullum et. al. (2006)[4] the researchers studied whether or not videoconferencing could be used to administer neurocognitive assessments. The researchers administered a battery of common neuropsychological tests to persons with mild cognitive impairment or mild to moderate Alzheimer's disease. The Mini-Mental State Exam (MMSE) and the Clock Drawing Test were administered to patients aged 83 to 95 and compared in-person (face-to-face) with videoconferencing examination. The testing administered by videoconferencing was successfully completed in all cases, and there was close agreement with test findings when administered face-to-face. Telecognitive testing was well tolerated by all participants (p. 389).

Alberta Hospital Ponoka[5] was the site of a study where the feasibility of administering neuropsychological tests via videoconferencing was compared to face-to-face testing. Participants all over the age of 60 without neurological or psychiatric disturbance were tested under two experimental conditions – face-to-face and via videoconference at 336 or 384 kbps.

Memory and learning, letter fluency, expressive word knowledge, reasoning, verbal attention, and visual-spatial processing were tested. Scores for expressive word knowledge were similar in the two test conditions.

In addition, there are several studies on the reliability of conducting neuropsychological testing over standard telephone, voice prompting, and computer technologies. Without the examiner present, patients complete neuropsychological testing effectively. Interactive voice response technology was used via POTS to measure cognitive function traditionally measured by a clinician or in paper-and-pencil formats.[6]

Telephone word-list recall was tested in a rural aging and memory study.[7] Word lists included the standardized telephone interview of cognitive status (TICS) and two newly developed lists. Results indicated that there were no differences in comparing the TICS and the two newly developed lists. This study, although not comparing in-person to telephone testing, does demonstrate that a standard does exist for telephonic neuropsychological testing, and that the introduction of video-conferencing to the equation will only enhance the accuracy and validity of testing.

And finally, with respect to telephonic testing, in a test of the reliability using a telephone interview procedure for cognitive, function, and behavioral scales in an elderly population with normal aging and dementia, researched performed assessments on patients both in-person and over the telephone. Results indicate that a telephone format is a reliable procedure for obtaining the assessment modalities studied.[8]

A web-based screening tool for monitoring cognitive status was tested in a study by Erlanger et. al.[9] Testing occurred over time to give neuropsychologists a better picture of an individual's cognitive status that a single point in time test. The study used screening batteries that could be administered online in a secure, supervised environment. Two neurocognitive test protocols were developed that were web-based and included components of standardized tests. The cognitive subsets were a number recall test, a number sequencing test, a memory cabinet 1 and 2 test, an incident learning 1 and 2 test, a response direction 1 and 2 test, a animal decoding test, and a symbol scanning test. Data from the study indicated that the four CSI factors had acceptable psychometric properties with regard to reliability and their correlation with traditional tests measuring similar cognitive function. Again, these tests were administered via computer.

ATA believes that again, addition of neuropsychological testing codes will have little budgetary impact, as previously demonstrated by the addition of 90801, and that evidence exists that many if not all neuropsychological testing can occur via telemedicine with reliable and valid results,

particularly in the environment with a telepresenter is with the patient. **With much interaction between health care providers and patients occurring over the telephone and through the use of computers, as well as substantial research showing the efficacy of such services, there is no plausible reason not to move forward with approval of 96118 and 96118.**

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation's seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation—a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC's recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Sincerely,
Dr. Poornima Paramesh

Issue Areas/Comments

GENERAL

GENERAL

Dear Sir or Madam:

I am a certified athletic trainer and graduate student at Georgia State University in Atlanta, GA.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Sheena M. Woodard, ATC, MS

Background

Offiec of the Administrator
Centers for Medicare & Medicaid Scrvices
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES
Dear Administrator:
As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medieare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare benefieiaries with access to anesthesia services.
This increase in Medicare payment is important for several reasons.
ı First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healtheare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of privatc market rates.
ı Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
ı Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.
Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be rcimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).
America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting rcquiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.
Sincerely,
Brittany Byrd, SRNA

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Commenting on physician owned therapy practices and referral for profit.

I am an OT at a hospital based outpatient hand therapy clinic. In previous years we have been a thriving hand clinic supporting hours for 4 therapists. In the past 4 years 2 arca physician practices have opened their own therapy practices. Initially we were offered positions in their clinics however we declined concerned about the ethics of such a practice. Since this time we have seen a great decline in our business with little to no referrals from these same physicians. Today we have 3 therapists working only 20 hours each.

My concern regarding physician owned therapy practices is what I perceive to be unethical referral of patients to the physician's own therapy practice where they might recieve more therapy visits than they would if they were referred elsewhere. When the physician stands to benefit financially from prescribing therapy visits there is great risk of fraud and abuse. At times we have seen a patient for a family practice physician who then referred the patient for consultation with an orthopaedic specialst. The patient has then been told that they needed to attend therapy at that physician's office so the doctor could have better communication with the therapist. Prior to the doctor having his/her own practice there were never any complaints about communication with our therapy practice. Some patients have had to pay higher co-pays to attend therapy at the physician's office increasing their health care costs. Often we hear about patients that were offered no choice but to attend therapy at the physician's office and were not advised of the added cost. Another situation that we see is Medicare patients who are told that they must attend therapy at the physician's office. After the patient has used up all of their allowed therapy visits at this nonhospital based clinic then they are referred to our clinic where we must charge them (Medicare) for another evaluation. There is no continuity of care nor regard for the patient's own personal cxpense.

I feel that Medicare needs to investigate this practice of physician owned therapy because by its very nature it lends itself to fraud and abuse. It seems to me that it is a conflict of interest when the more therapy a doctor prescribes for his patient the more money he/she makes.

Centers for Medicare and Medicaid Services

Department of Health and Human Services

Attention: CMS-1385-P

PO Box 8018

Baltimore, Maryland 21244-8018

Rc: "TECHNICAL CORRECTIONS"

The proposed rule dated July 12th contained an item under the technical corrections section calling for the current regulation that permits a beneficiary to be reimbursed by Medicare for an X-ray taken by a non-treating provider and used by a Doctor of Chiropractic to determine a subluxation, be eliminated. I am writing in strong opposition to this proposal.

While subluxation does not need to be detected by an X-ray, in some cases the patient clinically will require an X-ray to identify a subluxation or to rule out any "red flags," or to also determine diagnosis and treatment options. X-rays may also be required to help determine the need for further diagnostic testing, i.e. MRI or for a referral to the appropriate specialist.

By limiting a Doctor of Chiropractic from referring for an X-ray study, the costs for patient care will go up significantly due to the necessity of a referral to another provider (orthopedist or rheumatologist, etc.) for duplicative evaluation prior to referral to the radiologist. With fixed incomes and limited resources, seniors may choose to forgo X-rays and thus, needed treatment. If treatment is delayed, illnesses that could be life threatening may not be discovered. Simply put, it is the patient that will suffer as result of this proposal.

I strongly urge you to table this proposal. These X-rays, if needed, are integral to the overall treatment plan of Medicare patients and, again, it is ultimately the patient that will suffer should this proposal become standing regulation.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

August 30, 2007
Mr. Kerry N. Weems
Administrator Designate
Centers for Medicare and Medicaid Services
U.S. Department of Health and Human Services
Attention: CMS-1385-P
P.O. Box 8018
Baltimore, MD 21244-8018

Subject: Medicare Program; Proposed Revisions to Payment Policies under the Physician Fee Schedule, and Other Part B Payment Policies for CY 2008; Proposed Rule
Dear Mr. Weems:
I am a physical therapist who co-owns a private practice in Florence, AL, a small city in the northwest corner of the state. The clinic is relatively small, where we average about 25 patients per day. This is my 2nd year in private practice, although I spent time as a staff therapist, clinical director, and administrator for a large rehab company over the past 5 years.
The purpose of this letter is to express my concerns regarding Physician Self-Referral Issues. I wish to comment on the July 12 proposed 2008 physician fee schedule rule, specifically the issue surrounding physician self-referral exception. My comments are intended to highlight the wrongful nature of physician-owned physical therapy services and support PT services removal from permitted services under the in-office ancillary exception.
My initial concern is that physicians have an inherent financial incentive to refer patients to the practices they have invested in, and to overutilize those services. I have witnessed this myself not only with PT services, but diagnostic services as well. Physicians are in a very influential position, and can often sway patients into an in-office ancillary service that may not be medically necessary.
The issue that I feel most strongly about is the fact that the in-office ancillary services exception has created a loophole that has resulted in the expansion of physician-owned arrangements that provide physical therapy services. Based on what I ve experienced, this type of arrangement decreases the quality of physical therapy care given to your patients. Physicians have a captive referral base of physical therapy patients in their offices, therefore, the need to provide superior care to sustain business is not warranted. This noncompetitive environment creates mediocrity, and your patients do not receive the service they deserve. In addition, I think you will find that the patients/therapist/day ratio will increase substantially, further decreasing the value of the physical therapy service provided.
In closing, I would like to thank you for considering my comments, and thank you for allowing our profession s voice to be heard concerning this matter.

RE: CMS 1385-P
In Office Ancillary Services Exemption

Dear Sir or Madam:

Thank you for the opportunity to comment regarding whether changes are necessary pertaining to the PHYSICIAN SELF-REFERRAL PROVISIONS.

I am a licensed physical therapist in the state of Alabama who has chosen to work for an orthopaedic physician practice. Our physical therapy services are only offered to patients who are referred by the physicians in this practice. I find that this arrangement is highly beneficial to the patient because we are able to see patients the same day that physical therapy is prescribed, access the complete medical file and history of the patient and have greater interaction with the referring physician regarding the patient's care.

Once physical therapy is prescribed, the patient can choose where to receive their physical therapy services. Many patients prefer the convenience of having their physical therapy at the same location of their physician's office. This is not an arrangement that encourages abuse. Therapy services should continue to qualify for the in office ancillary services exception.

The views expressed by a national letter-writing campaign promoted by the American Physical Therapy Association are not representative of the opinions of the majority of physical therapists.

Sincerely,

Andrew McGill, PT, ATC

Resource-Based PE RVUs

Resource-Based PE RVUs

I am writing on behalf of my group. I feel that the MTWA is avery important tool to determine a patient's risk of sudden cardiac death.
We use this test to determine which patients will benefit most from an implantable cardioverter defibrillator.(ICD) I understand that the Medicare Practice Formaula significantly decreases physician payment for MTWA reimbursement. The "equipment usage assumption" of 50%is inacurate, which results in an inappropriate payment for physicians. We only use this test for specific high risk patients, who meet the criteria, and will benefit form this analysis. We use the test only when indicated, not 50% of the time. I feel that CMS should use the actual usage rate when available, to pay for this valuable technology..

Thank you for the opportunity to submit comments on the Physician Self-Referral Provisions of CMS-1385-P entitled Medicare Program; Proposed Revisions to Payment Policies Under the Physician Fee Schedule for Calendar Year 2008. I am a board-certified pathologist and a member of the College of American Pathologists. I practice in a small private pathology group which is currently dealing intensely with the issue of self referral of prostate biopsies by urologists.

I applaud CMS for undertaking this important initiative to end self-referral abuses in the billing and payment for pathology services. I am aware of arrangements in my practice area that give physician groups a share of the revenues from the pathology services ordered and performed for the group s patients. I believe these arrangements are an abuse of the Stark law prohibition against physician self-referrals and I support revisions to close the loopholes that allow physicians to profit from pathology services.

Specifically I support the expansion of the anti-markup rule to purchased pathology interpretations and the exclusion of anatomic pathology from the in-office ancillary services exception to the Stark law. These revisions to the Medicare reassignment rule and physician self-referral provisions are necessary to eliminate financial self-interest in clinical decision-making. I believe that physicians should not be able to profit from the provision of pathology services unless the physician is capable of personally performing or supervising the service.

Opponents to these proposed changes assert that their captive pathology arrangements enhance patient care. I agree that the Medicare program should ensure that providers furnish care in the best interests of their patients, and, restrictions on physician self-referrals are an imperative program safeguard to ensure that clinical decisions are determined solely on the basis of quality. The proposed changes do not impact the availability or delivery of pathology services and are designed only to remove the financial conflict of interest that compromises the integrity of the Medicare program.

Sincerely,

Jeffrey Edelman M.D.

RE: CMS 1385-P
In Office Ancillary Services Exemption

Dear Sir or Madam:

Thank you for the opportunity to comment regarding whether changes are necessary pertaining to the PHYSICIAN SELF-REFERRAL PROVISIONS.

I am a licensed physical therapist in the state of Alabama who has chosen to work for an orthopaedic physician practice. Our physical therapy services are only offered to patients who are referred by the physicians in this practice. I find that this arrangement is highly beneficial to the patient because we are able to see patients the same day that physical therapy is prescribed, access the complete medical file and history of the patient and have greater interaction with the referring physician regarding the patient's care.

Once physical therapy is prescribed, the patient can choose where to receive their physical therapy services. Many patients prefer the convenience of having their physical therapy at the same location of their physician's office. This is not an arrangement that encourages abuse. Therapy services should continue to qualify for the in office ancillary services exception.

The views expressed by a national letter-writing campaign promoted by the American Physical Therapy Association are not representative of the opinions of the majority of physical therapists.

Sincerely,

Emily Smith, PT

Re: CMS-1385-P

Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Sincerely,
Dr. Karrin Stoehr

Background

Background

Office of the Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
P.O. Box 8018 RE: CMS 1385 P (BACKGROUND, IMPACT)
Baltimore, MD 21244 8018 ANESTHESIA SERVICES

Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

? First, as the AANA has previously stated to CMS, Medicare currently under-reimburses for anesthesia services, putting at risk the availability of anesthesia and other healthcare services for Medicare beneficiaries. Studies by the Medicare Payment Advisory Commission (MedPAC) and others have demonstrated that Medicare Part B reimburses for most services at approximately 80% of private market rates, but reimburses for anesthesia services at approximately 40% of private market rates.
? Second, this proposed rule reviews and adjusts anesthesia services for 2008. Most Part B providers services had been reviewed and adjusted in previous years, effective January 2007. However, the value of anesthesia work was not adjusted by this process until this proposed rule.
? Third, CMS proposed change in the relative value of anesthesia work would help to correct the value of anesthesia services which have long slipped behind inflationary adjustments.

Additionally, if CMS proposed change is not enacted and if Congress fails to reverse the 10% sustainable growth rate (SGR) cut to Medicare payment, an average 12-unit anesthesia service in 2008 will be reimbursed at a rate about 17% below 2006 payment levels, and more than a third below 1992 payment levels (adjusted for inflation).

America s 36,000 CRNAs provide some 27 million anesthetics in the U.S. annually, in every setting requiring anesthesia services, and are the predominant anesthesia providers to rural and medically underserved America. Medicare patients and healthcare delivery in the U.S. depend on our services. The availability of anesthesia services depends in part on fair Medicare payment for them. I support the agency s acknowledgement that anesthesia payments have been undervalued, and its proposal to increase the valuation of anesthesia work in a manner that boosts Medicare anesthesia payment.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

August 30, 2007

Centers for Medicare and Medicade Services

Dear Sir or Madam:

I have been an Athletic Trainer for 35 years working in a variety of settings, the last 15 years in the Hospital Out-patient Rehabilitation and High School outreach setting. I have a Masters degree, and have met annual continuing education requirements as a Certified Athletic Trainer. I am licensed to practice as an Athletic Trainer in Florida. I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day to day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Jim Mackie

Anesthcsia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to othcr physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation s seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC s recommendation.

To ensurc that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

RE: CMS 1385-P
In Office Ancillary Services Exemption

Dear Sir or Madam:

Thank you for the opportunity to comment regarding whether changes are necessary pertaining to the PHYSICIAN SELF-REFERRAL PROVISIONS.

I am a licensed physical therapist in the state of Alabama who has chosen to work for an orthopaedic physician practice. Our physical therapy services are only offered to patients who are referred by the physicians in this practice. I find that this arrangement is highly beneficial to the patient because we are able to see patients the same day that physical therapy is prescribed, access the complete medical file and history of the patient and have greater interaction with the referring physician regarding the patient's care.

Once physical therapy is prescribed, the patient can choose where to receive their physical therapy services. Many patients prefer the convenience of having their physical therapy at the same location of their physician's office. This is not an arrangement that encourages abuse. Therapy services should continue to qualify for the in office ancillary services exception.

The views expressed by a national letter-writing campaign promoted by the American Physical Therapy Association are not representative of the opinions of the majority of physical therapists.

Sincerely,

Sandy E. Stanard

From: Ryan Smith, PT
CEO and Co-Owner
Sports Center Physical Therapy
1600 W. 38th St., Suite 201
Austin, TX 78731

Subject: Medicare Program; Proposed Revisions to Payment Policies under the Physician Fee Schedule, and Other Part B Payment Policies for CY 2008; Proposed Rule

Dear Mr. Weems,

My name is Ryan Smith and I am a physical therapist and private practice owner in Austin, TX. I have been practicing since 1998 in the state of Oklahoma and Texas. I received my Physical Therapy degree from the University of Oklahoma in 1998 and my Masters of Business Administration from Oklahoma City University in 2000. I currently co-own a private, outpatient, orthopedic physical therapy practice in Austin, TX called Sports Center Physical Therapy.

The purpose of my letter is to address **Physician Self-Referral to Physical Therapy**. I would like to comment on the July 12 proposed 2008 physician fee schedule rule, specifically the issue surrounding physician self-referral and the "in-office ancillary services" exception. My comments are intended to highlight the abusive nature of physician-owned physical therapy services and support PT services removal from permitted services under the in-office ancillary exception.

KEY POINT: The potential for fraud and abuse exists whenever physicians are able to refer Medicare beneficiaries to entities in which they have a financial interest, especially in the case of physician-owned physical therapy services. Physicians who own practices that provide physical therapy services have an inherent financial incentive to refer their patients to the practices they have invested in and to over-utilize those services for financial reasons. By eliminating physical therapy as a designated health service (DHS) furnished under the in-office ancillary services exception, CMS would reduce a significant amount of programmatic abuse, over-utilization of physical therapy services under the Medicare program, and enhance the quality of patient care.

Examples

- With the rise of physician-owned physical therapy practices in Austin over the past 5 years, we are now seeing a large portion of patients who are first being referred to their orthopedist's

inexperienced physical therapy group, exhausting their PT benefits and then arriving at our clinic without the resources to get the problem resolved. These are the same surgeons that we worked with for years in a professional manner to help heal our patients. Now they send all of their patients needing PT to their in-house PT group where the tools and staff are often inadequate to meet the patient's needs, particularly with joint disease, cartilage injuries, and tendon injuries. This occurs because the PT services are often an after-thought in terms of tools and investment because they are physicians first, not PTs. This only harms the beneficiaries.

- Patients are losing the right to choose where they receive their care. Many beneficiaries do exactly what their physicians tell them and they do not understand they have a choice in who they see. This gives physicians an unfair advantage since they are required to provide a prescription for PT services in Texas. As a result, Sports Center is the only major privately owned PT practice left in Austin, TX that we are aware of. All other PT practices are now either corporately owned through HealthSouth, USPT, or physicians. In the 16th largest market in the US, physical therapists should be able to succeed in the market, but they cannot because building a practice is so difficult due to physician self-referral.

- The "in-office ancillary services" exception is defined so broadly in the regulations that it facilitates the creation of abusive referral arrangements. With the physician's payments decreasing, the urge to self refer for PT is too strong and creates a significant other source of revenue. Our experience shows that the in-house PT services are often abused and inadequate to meet the patient's needs.

- The "in-office ancillary services" exception has created a loophole that has resulted in the expansion of physician-owned arrangements that provide physical therapy services. Because of Medicare referral requirements, physicians have a captive referral base of physical therapy patients in their offices.

- Due to the repetitive nature of physical therapy services, it is no more convenient for the patient to receive services in the physician's office than an independent physical therapy clinic such as ours that is located centrally in Austin, TX.

I strongly urge the CMS to remove physical therapy as a designated health service (DHS) permissible under the in-office ancillary exception of the federal physician self-referral laws.

Thank you Mr. Weems for considering my comments.

Sincerely,

Ryan M. Smith, PT

EMORY SPORTS MEDICINE CENTER

59 Executive Park South, suite 1000
Atlanta, Georgia 30329
Phone 404.778.7176
Fax 404.778.7266

Dear Sir or Madam:

To Whom It May Concern; this is John W. Xerogeanes MD, Chief of Sports Medicine at Emory Orthopaedics and Spine Center, Emory Sports Medicine Center. Emory Sports Medicine Center is a sub-specialty sports medicine orthopaedic practice including 6 fellowship trained sports medicine physicians. We have employed certified athletic trainers in our practice for the past 10 years and feel these are key professionals and the most appropriate heath care providers in the orthopaedic setting.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

John W Xerogeanes MD

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

I am the Director of the Athletic Training Education Program at The University of North Carolina at Pembroke. I was a practicing certified athletic trainer for 15 years, and now I am preparing young men and women to become certified athletic trainers. I have a masters degree in Human Movement Studies (Advanced Athletic Training) with a concentration in Clinical Anatomy from the University of Oregon.

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

We recently completed the rigorous accreditation process through CAATE for the undergraduate Athletic Training Education Program I direct at UNCP. My university is in a rural area where lack of adequate health care is of major concern. The athletic training students we are educating are capable of and willing to perform services to a population of people who are currently very underserved, but this law will take job opportunties away from them.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Susan Edkins, MS, ATC, LAT

RE: CMS 1385 P (BACKGROUND, IMPACT)
ANESTHESIA SERVICES

Dear Administrator:

As a member of the American Association of Nurse Anesthetists (AANA), I write to support the Centers for Medicare & Medicaid Services (CMS) proposal to boost the value of anesthesia work by 32%. Under CMS proposed rule Medicare would increase the anesthesia conversion factor (CF) by 15% in 2008 compared with current levels. (72 FR 38122, 7/12/2007) If adopted, CMS proposal would help to ensure that Certified Registered Nurse Anesthetists (CRNAs) as Medicare Part B providers can continue to provide Medicare beneficiaries with access to anesthesia services.

This increase in Medicare payment is important for several reasons.

Payment For Procedures And Services Provided In ASCs

Payment For Procedures And Services Provided In ASCs

Thank you for your consideration on this very important issue. As an anesthesiologist working at a large community-based hospital, I find that an ever-increasing percentage of our surgical patients are medicare/medicaid recipients. Unfortunately, more and more of the privately insured patients are having their procedures performed at outpatient surgery centers. Therefore, an increase in CMS's anesthesia conversion factor would be a great benefit to those anesthesiologists who take care of a larger proportion of the medicare/medicaid population.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:

Thank you for the opportunity to comment on Physician Self-Referral Provisions.

I work for an orthopaedic physician practice which is benefical for our patients. This provision allow direct and effectient communication from their physician to their therapist, thorough and prompt response for patients medical history, and save patients time and money from their busy lifestyle. We should continue to give patients opportunity and resources to choose where they should recieve physical therapy. If the provision is not pass therefore you are taking away patients rights. Patients have the right to choose their physician as well as where they choose to recieve physicial therapy. We as skilled clinicians chose this profession to serve and to take care of patients with the best of our knowledge so patients can return to their functional lifestyle as soon as possible. Patients should not be limited nor prolong on their recovery because they have enough physical challenges in their life.

Sincerely,

Markita Poellnitz, LPTA

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just $16.19 per unit. This amount does not cover the cost of caring for our nation's seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation—a move that would result in an increase of nearly $4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC's recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Issue Areas/Comments

GENERAL

GENERAL

Dear Sir or Madam:

My name is Jill McCormick. I am a PT and an ATC. I own my own out patient clinic where we serve patients, young and old, athletic, geriatric, and in between. My clinic employs ATCs and we serve the local high schools, covering their athletic events to prevent and treat injuries "on the field".

I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.

While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.

As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

The lack of access and workforce shortage to fill therapy positions is widely known throughout the industry. It is irresponsible for CMS, which is supposed to be concerned with the health of Americans, especially those in rural areas, to further restrict their ability to receive those services. The flexible current standards of staffing in hospitals and other rehabilitation facilities are pertinent in ensuring patients receive the best, most cost-effective treatment available.

Since CMS seems to have come to these proposed changes without clinical or financial justification, I would strongly encourage the CMS to consider the recommendations of those professionals that are tasked with overseeing the day-to-day health care needs of their patients. I respectfully request that you withdraw the proposed changes related to hospitals, rural clinics, and any Medicare Part A or B hospital or rehabilitation facility.

Sincerely,

Jill McCormick, PT, ATC

Dear Ms. Norwlk,

As a practicing Anesthesiologist in western North Carolina, your agencies reimbursement for anesthesia services directly affects me and my patients. At current reimbursement levels I lose money on every Medicare patient I take care of. With other costs in my practice continuing to rise, there is no longer any efficiencies to make up for this loss. I am going to be forced to cut back services to these patients, or not treat them at all. This is not what I want to do, but the economics leave little choice. The government does not expect defense contractors to produce our nations weapons systems at a loss; please don t expect us to take care of our nations citizens at below cost. I m not asking for a profit in taking care of these patients; I just don t think it is my professions responsibility to pay for their care out of our own pockets.

Please consider carefully CMS-1385-P and increasing the anesthesia payments under the 2009 Physician Fee Schedule. This is a serious matter that will affect seniors throughout the country.

Sincerely,

John A. Meyer, M.D.

Technical Corrections

Technical Corrections

Centers for Medicare and Medicaid Services
Department of Health and Human Services
Attention: CMS-1385-P
PO Box 8018
Baltimore, Maryland 21244-8018

Re: TECHNICAL CORRECTIONS

The proposed rule dated July 12th contained an item under the technical corrections section calling for the current regulation that permits a beneficiary to be reimbursed by Medicare for an X-ray taken by a non-treating provider and used by a Doctor of Chiropractic to determine a subluxation, be eliminated. I am writing in strong opposition to this proposal.

While subluxation does not need to be detected by an X-ray, in some cases the patient clinically will require an X-ray to identify a subluxation or to rule out any "red flags," or to also determine diagnosis and treatment options. X-rays may also be required to help determine the need for further diagnostic testing, i.e. MRI or for a referral to the appropriate specialist.

By limiting a Doctor of Chiropractic from referring for an X-ray study, the costs for patient care will go up significantly due to the necessity of a referral to another provider (orthopedist or rheumatologist, etc.) for duplicative evaluation prior to referral to the radiologist. With fixed incomes and limited resources seniors may choose to forgo X-rays and thus needed treatment. If treatment is delayed illnesses that could be life threatening may not be discovered. Simply put, it is the patient that will suffer as result of this proposal.

I strongly urge you to table this proposal. These X-rays, if needed, are integral to the overall treatment plan of Medicare patients and, again, it is ultimately the patient that will suffer should this proposal become standing regulation.

Sincerely,

Dr. Ambrose Perduk, Jr.

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Kerry N. Weems, Administrator-Designate,

I have been a liscensed physical therapist in New Jersey and an active member of the APTA for nearly 20 years. Currently, I am employed by Kessler Institute for Rehabilitation as a clinical specialist. I have endeavored throughout my career to avoid working in a referral-for-profit situation, lucrative as it may be for all involved, to avoid a potential conflict of interest where profit could be considered potentially ahead of the patient's best interests.

I am writing to express once again my strong opposition in principle to the ownership of physical therapy services by physicians or their proxies. Inherently, as the Stark laws correctly identified, there is the potential opportunity for abuse of Medicare patients (and non-Medicare patients)and overutilization of physical therapy services when the source of referral is able to directly or indirectly financially benefit from referral. This type of referral situation is really no different from that of a physician writing a prescription for a medication and receiving compensation from a pharmacy for the prescription.

With the abundant opportunity to refer patients to licensed, fully-trained independent physical therapists in varied non-physician owned settings throughout the country, today there appears to be no credible reason for a physician to own physical therapy services. Furthermore, having therapy services offered in a physician-owned PT office, potentially performed by a non-licensed individual under the "direct" supervision of a physician, makes little sense from a consumer perspective (it seems unlikely that a physician will have the time in his or her schedule to remain directly supervising throughout the administering of a physical therapy treatment, or have the specific training to oversee most appropriately a non-licensed individual delegated to perform "physical therapy").

For the good of Medicare and other healthcare consumers receiving physical therapy treatment, treatment should only be rendered by licensed physical therapists or licensed physical therapists assistants who are fully independent of a referral-for-profit arrangement. Thank you for your consideration of this important matter.

Sincerely yours,

Jeff Flyer, PT NJQA03922

Physician Self-Referral Provisions

Physician Self-Referral Provisions

Dear Sir or Madam:
I am a licensed athletic trainer and work for Citizens Memorial Hospital Outpatient Sports Medicine Center in Bolivar, Missouri. I provide physical medicine and rehabilitation services to injured athletes in the Southwest Missouri area. I have a college education, national certification, and state license that qualify me to provide athletic-specific care to these individuals. I am writing today to voice my opposition to the therapy standards and requirements in regards to the staffing provisions for rehabilitation in hospitals and facilities proposed in 1385-P.
While I am concerned that these proposed changes to the hospital Conditions of Participation have not received the proper and usual vetting, I am more concerned that these proposed rules will create additional lack of access to quality health care for my patients.
It personally offends me that the unique services which I provide may no longer be available to the patients who need them. It should also be troubling to the patients that will no doubt be forced to receive care from a professional who is not educated or trained to treat such injuries.
As an athletic trainer, I am qualified to perform physical medicine and rehabilitation services, which you know is not the same as physical therapy. My education, clinical experience, and national certification exam ensure that my patients receive quality health care. State law and hospital medical professionals have deemed me qualified to perform these services and these proposed regulations attempt to circumvent those standards.

Baltimore, MD 21244-8018
ATTN: CMS-1385-P

RE: Physician Self-Referral Provisions of CMS-1385-P entitled "Medicare Program; Proposed Revisions to Payment Policies Under the Physician Fee Schedule for Calendar Year 2008".

To Whom It May Concern:

I appreciate this forum as opportunity to express my views referable to the provision of pathology services as impacted by the Physician Self Referral Provisions of CMS-1385-P entitled "Medicare Program; Proposed Revisions to Payment Policies Under the Physician Fee Schedule for Calendar Year 2008".

I am a board certified pathologist, member of the College of American Pathologists, as well as, a member of the New Jersey Society of Pathologists, and have been in practice within the City of Trenton, Mercer County, New Jersey since 1999. I am a member of a group practice comprised of three full-time and one part-time pathologists, primarily practicing in a hospital-based setting.
