Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just \$16.19 per unit. This amount does not cover the cost of caring for our nation's seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly \$4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC's recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just \$16.19 per unit. This amount does not cover the cost of caring for our nation's seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly \$4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC's recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just \$16.19 per unit. This amount does not cover the cost of caring for our nation's seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly \$4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC's recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

CMS-1385-P-----As an anesthesiologist with 26 years of experience, I have been disappointed at the tendency of the federal government to undervalue the work we do to the elderly patients in our country. Anesthesia is a life-or-death proposition--and often more so as one stacks up the decades. I heartily support your review of the Medicare reimbursement of anesthesia services, and I support any effort to raise the reimbursement level to a more appropriate level.

Sincerely,

J. Michael Hay M.D.

CMS 1385 P

I am writing in support of CMS increasing payment for anesthesia services. I provide care in a urban hospital with a high proportion of medicare and medicaid patients. The reduced payment we receive from these services makes it difficult to attract and maintain anesthesiologists at our hospital. This is especially true for medicaid. Other institutions with a lower percentage of medicaid/medicare attract the best and the brightest due to the fact those physicians make more per hour of work than we do. When a resident physician makes a choice of place of employment he/she cannot help but to wish to maximize their per hour rate of reimbursement. This unfair and absurdly low rate of reimbursement from medicaid is a major cause of dissatisfaction I have with my work and compels me to look for work where the "grass is greener". I think that is high time for the rates for our services to be brought up to reasonable standards.

Medicare Economic Index (MEI)

Medicare Economic Index (MEI)

To Whom It May Concern,

It has been very concerning over the past few years as Medicare reimbursement for anesthesiologists continues to decline. I have been a physician for over 20 years, practicing clinical anesthesia for the greater part of that time. Anesthesia is a particularly critical area of medical care. As each person undergoes an operation, the anesthesiologist is the unsung hero. In order to maintain the high quality of physicians entering into the field, it is important to keep incomes at pace with the economy.

I am personally not sure how long I will continue to practice anesthesia, let alone medicine considering the onslaught from insurance companies, and now the government, to save money off the backs of the individuals who devote their time and energy, and tremendous initial monetary investment to practice medicine.

I believe the government has an obligation to all its citizens to provide healthcare. Currently, this is at least true for the elderly. Please encourage all physicians to remain part of this very important government program by keeping reimbursements commensurate with services provided. Please enact the increase in anesthesia reimbursement.

Thank you for your consideration,

Neeta K. Moonka, MD

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just \$16.19 per unit. This amount does not cover the cost of caring for our nation's seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In our practice, we pay our nurse anesthetists \$21/unit so we lose about \$5/unit on each Medicare/Medicaid patient, and this does not allow any revenue for our supervising anesthesiologists. Our practice is 52% Medicare/Medicaid so that my group loses over \$5 million annually. Without financial support from our hospital systems, our practice is not financially viable under the current reimbursement.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly \$4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC's recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just \$16.19 per unit. This amount does not cover the cost of caring for our nation's seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly \$4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC's recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

GENERAL

GENERAL

RE Payment for Physician Anesthesia Services:

I have been fortunate enough to find a job niche in which I provide anesthetics to almost NO Medicare patients. Why should I take care of the oldest, sickest, most medically complex patients for less than one-half the remuneration for other patients? Quite frankly, I'm tired of begging ignorant government bureaucrats and self-serving politicians for nominal pay increases. The US Constitution was amended to prohibit slavery. Somebody should let CMS know.

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I want to express my support for the proposal to increase anesthesia payments in the 2008 Physician Fee Schedule. Thank you for recognizing the undervaluation of anesthesia services. I know our ASA leaders have presented this issue to your agency and I appreciate your willingness to take steps to address this complicated issue.

When the RBRVS started, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just \$16.19 per unit. We end up with approximately \$60 per hour for payment of physician work time. This amount does not cover the cost of caring for our nation's seniors. It is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to fix this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly \$4.00 per anesthesia unit. This would serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC's recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

I am an anesthesiologist in academic practice in Portland, Oregon and I hope to continue in this role in the future. Improved Medicare payment for our services will help the academic centers remain viable and able to train physicians for the future.

Sincerely, Angela Kendrick, MD

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just \$16.19 per unit. This amount does not cover the cost of caring for our nation's seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly \$4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC's recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

And now let's be realistic "Have you received a cost of living increase in the last 4 years or have the government employees received it?" But if you do not vote in favor of this you are being untruthful, you would be saying that due to the economy that the government employee deserved a cost of living increase and the physician was not only insulated from the same economy but had an inverse relationship with it and needed a reduction in allowable payments. I would find this hard to believe, wouldn't you?

Thank you for your consideration of this serious matter.

The proposed increase in medicare reimbursement for anesthesi services is without question necessary. Anesthesia has been undervalued for years and I am seeing the trend in difficulty in finding anesthesiologists to provide anesthesia in areas with elderly populations. this is not only disturbing as an anesthesiologist but as we all will be of medicare age, god willing, professional services and proper care will be difficult for all to find. please increase the anesthesia unit value as proposed the 4.00 which really is not adequate , but a start

Payment For Procedures And Services Provided In ASCs

I have been practicing anesthesia for medicare beneficiaries for over 25 years. They are usually the most sick and demanding patient type that I see and care for in the urban hospital setting. I was paid more by Medicare in 1989 than I am now, 18 years later. It is time for a payment increase for anesthesiologists and a correction in the formula for anesthesia payment calculation.

Sincerely,
Greg Boulanger MD

Re: CMS-1385-P Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing in support of the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule.

CMS recognition of the gross undervaluation of anesthesia services is long overdue.

The original RBRVS undervalued anesthesia work compared to other physician services. Medicare payment for anesthesia services is presently \$16.19 per unit which is not enough to cover the costs of care.

I strongly support the RUC recommended increase the anesthesia conversion factor to offset this undervaluation.

I support full implementation of the RUC s recommendation.

Thank you very much for your consideration.

I am,

Sincerely yours,

Richard I. Cook, MD

Resource-Based PE RVUs

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

As an academic anesthesiologist and a member of the American Society of Anesthesiologists (ASA), I am writing today to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. This issue is of great importance to academic anesthesiologists such as myself because it comes on top of our already reduced reimbursements due to the 50% reduction in CMS reimbursements provided to teaching anesthesiologists, an issue which we alone in academic medicine face. I am grateful that CMS has recognized the gross undervaluation of anesthesia services in general and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just \$16.19 per unit. This amount does not cover the cost of caring for our nation's seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations. Evidence is growing that anesthesiologists are seeking practice settings where the need to provide care to Medicare beneficiaries is at a minimum. With a nationwide shortage of anesthesia providers, this trend suggests a looming access crisis for many Medicare beneficiaries to surgical, pain medicine and critical care services. This leaves academic institutions such as mine carrying greater and greater Medicare load at a time when our department and institution are already severely financially stretched.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly \$4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC's recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this important matter.

Re: CMS-1385-P
Anesthesia Coding (Part of 5-Year Review)

Dear Ms. Norwalk:

I am writing to express my strongest support for the proposal to increase anesthesia payments under the 2008 Physician Fee Schedule. I am grateful that CMS has recognized the gross undervaluation of anesthesia services, and that the Agency is taking steps to address this complicated issue.

When the RBRVS was instituted, it created a huge payment disparity for anesthesia care, mostly due to significant undervaluation of anesthesia work compared to other physician services. Today, more than a decade since the RBRVS took effect, Medicare payment for anesthesia services stands at just \$16.19 per unit. This amount does not cover the cost of caring for our nation's seniors, and is creating an unsustainable system in which anesthesiologists are being forced away from areas with disproportionately high Medicare populations. Medicare patients are a huge strain on our practice. Because of their age and often multiple medical problems, they are some of the most difficult patients to care for. They require the most skill and effort on the part of the anesthesiologist. At the same time the reimbursement from Medicare is so low that I lose money everytime I treat a Medicare patient. When I attempt to recruit new physicians, a very common question is "what percent Medicare patients do you see?". The higher the percentage Medicare, the more work and lower income the physician can expect. When we look at new opportunities, such as surgery centers, we must ask about Medicare patients. A recent surgery center opportunity became economically non-viable when we learned of the 30% anticipated Medicare patients. High Medicare populations are as economically devastating to anesthesiologists as uninsured poor patients are to other physicians.

In an effort to rectify this untenable situation, the RUC recommended that CMS increase the anesthesia conversion factor to offset a calculated 32 percent work undervaluation a move that would result in an increase of nearly \$4.00 per anesthesia unit and serve as a major step forward in correcting the long-standing undervaluation of anesthesia services. I am pleased that the Agency accepted this recommendation in its proposed rule, and I support full implementation of the RUC's recommendation.

To ensure that our patients have access to expert anesthesiology medical care, it is imperative that CMS follow through with the proposal in the Federal Register by fully and immediately implementing the anesthesia conversion factor increase as recommended by the RUC.

Thank you for your consideration of this serious matter.

Edward McGough, MD
